# To The Trade

---

WE have just completed the seventy-sixth year of continuous and successful activity of "The Old Carpenter Shop." We are well aware that mere age counts for little unless the experience gained and strength acquired make for better service and greater usefulness. These are days of high speed, high tension and great responsibilities. Wideawake new methods are necessary to meet the demands of modern business. We are keeping step in the procession right behind the band.

Ours is a class of goods in which Quality and Service are primary considerations. We are confident that where life and property are at stake the surest economy lies in using the highest grade of goods obtainable, backed up by a house of record and standing.

For the convenience of our customers we shall issue from time to time a general discount guide applying to this catalogue. Owing to the constant fluctuations in a large proportion of our staple lines the quotations named herein are subject to change without notice.

When you are in Chicago we invite you to call and give us an opportunity to show you over our new plant, built up by seventy-five years of constant painstaking service in the wonderful city which had, when we began business, less than five thousand inhabitants, and is now the Great Central Market of the United States.

Yours respectfully,

Chicago, January 1, 1917

GEO. B. CARPENTER & CO.

Second Edition August 15, 1917.

WAREHOUSES A AND B  
 Corner of Grand Avenue and Orleans Street  
 CHICAGO, ILL.

Used solely for reserve stock in all lines, and for original package shipping.

OUR SOUTH CHICAGO STORE  
**GREAT LAKES SUPPLY COMPANY**

Store and Office, 3217 East 92nd Street  
Warehouses, 3207-9 East 92nd Street

We recommend for the convenience of the trade in the Calumet Region, our South Chicago Store

We carry a complete line, same as at the Main Store. All orders will receive careful attention and prompt delivery.

GEO. B. CARPENTER & CO.

## OUR NEW WAREHOUSE AT SOUTH CHICAGO

THE business of our South Chicago branch, known as Great Lakes Supply Co., with offices at 3217 East 92nd Street, has grown to such proportions that we have recently added a new warehouse to the South Chicago equipment to take care of stocks of pipe, fittings, steel, iron, cordage and heavy hardware, and better serve the large business originating along the Calumet river.

The new warehouse is 230 feet long by 80 feet wide and 40 feet high. It is equipped with five standard gauge railroad tracks running the entire length of the building. We can load and unload a large number of cars under our own roof, and oftentimes transfer material direct from the mill car to our heavy motor trucks for quick delivery among the manufacturing centers of northern Illinois and Indiana.

With such facilities as these, combined with constant effort to make every department of this business render efficient and painstaking service, we feel certain that we can handle your supply business to your entire satisfaction.

GEO. B. CARPENTER & CO.

# Hardware Department

---

**F**OLLOWING the policy which has guided us in the selection of all our lines of merchandise, our Hardware Department represents only the "Survival of the Fittest." Every item in the line has been chosen from the standpoint of the *user*—with an eye to *value* rather than *saleability*.

The original foundation of this department rested upon our trade with contractors, railroads and marine transportation interests, where our goods are expected to protect *life* and *limb*. It is self-evident that inferior goods have no place in exacting conditions of that nature. "*Value First*" is not only the best policy—it is the *only* policy, and the cheapest insurance.

Starting therefore with a high ideal of our obligations to the trade, we have gradually enlarged and extended our activity in the Hardware field, until we are now able to offer a wide range of goods which we can state confidently are the very best of their various kinds.

Some of the leading items in the line are:

Wire Rope	Carpenters' Tools
Derricks	Machinists' Tools
Derrick Fittings	Engineers' Tools
Steel Tackle Blocks	Winches
Wood Tackle Blocks	Hand Powers
Chain Hoists	Saw Rigs
Diving Apparatus	Gasoline Hoists
Well Machinery	Gas Engines
Concrete Mixers	Bolts
Drag Scrapers	Nuts
Power Pumps	Paints
Trench Pumps	Oils
Power Transmission Equipment	Greases
Shovels	Oakum
Iron Pipe	Naval Stores
Pipe Fittings

**Fig. 77**

DISSTON, No. 77

For use in Dry Seasoned Lumber only

The No. 77 Saw is particularly adapted for fine cabinet work, sawing mitres, where rapid and smooth cutting is required. The use of a plane can be dispensed with, as they will cut a joint sufficiently smooth to glue without planing. These Saws are warranted to run without set in dry, seasoned lumber only, and are not for general use. They are high in temper, specially ground for clearance and require no set.

No. 77. Extra London Spring Steel Blade, Warranted, Apple Handle Polished, Brass Screws.

## DISSTON'S HANDY SAW KITS

Fig. 101

The combination of Blades in any of these sets provides a Handy Kit for the practical mechanic, householder, farmer, etc.

Hardwood Handle, Carved and Polished, with a special lever device which is arranged to hold the blades comprising the Sets rigid and the special formation of the butt of the blades prevents wobbling.

The Special shaped Lever Bolt, permits by a quarter or half turn of same, the keeping of the Lever in position so it will not interfere with the working of the saw.

The Plumbers' Saw Blade is specially tempered for cutting nails, spikes, bolts, gas pipe, soil pipe, etc.

The blades are made of DISSTON CRUCIBLE STEEL, ground and polished.

**No. 101, SIX BLADE SET, \$4.50**

Cross-cut Saw Blade, 10 point.....	20 inch
Rip Saw Blade, 7 point.....	20 inch
Plumbers' Saw Blade.....	18 inch
Pruning Saw Blade.....	16 inch
Compass Saw Blade.....	14 inch
Keyhole Saw Blade.....	12 inch

Keyhole Saw Blade.....	12 inch

Adjustable Handle

**No. 105, THREE BLADE SET, \$2.75**

Cross-cut Saw Blade, 10 point.....	20 inch
Rip Saw Blade, 7 point.....	20 inch
Compass Saw Blade.....	14 inch

Adjustable Handle

Canvas Cases only .....\$6.00 per doz.

Put up in a durable canvas case, having strong leather bound edges, and containing separate compartments for each blade, with a special pocket for the handle. Convenient and light to carry.

## "JACKSON" BACK SAW

Fig. 91

Beech Handle, Polished Edge, Blued Back.

No. 1.....\$8.00 10.00 12.00 14.00 16.00 18.00 per doz.

## CABINET SAW

Nickel-plated Lever Tightener

Fig. 80

Cherry Handle, Carved and Polished. Disston Crucible Steel Blade, Warranted. One edge toothed 10 points for cutting with the grain; the other, 15 points, for cross-cutting.  $\frac{3}{8}$  inch hole in end for hanging up saw.

The blade is securely fastened in handle by the lever tightener, which permits a quick reversal of the handle to one side or the other according to the tooth-edge to be used.

Especially adapted for fine work, such as cabinet, pattern making, mitering, etc.

All sizes  $3\frac{1}{2}$  inches wide.

No. 80.....\$8.00 8.25 9.00 10.00 11.00 12.00 per doz.

## COMPASS SAW

Fig. 92

Apple Handle, Brass Screws.

No. 2.....\$4.25 4.50 4.75 5.00 5.25 per doz.

## COMPASS BLADES

Packed one dozen in box.

No. 2 Blades.....\$2.25 2.50 2.75 3.00 3.25 per doz.

These blades are sent **not punched** unless ordered otherwise.

## KEYHOLE SAW AND PAD

Fig. 95

Round, Hardwood Handle, Polished, Nickel-Plated Ferrule. The Handle is slotted clear through, permitting the adjustment of blade for length of cutting-edge required. The Blade, 10 inches long, ground thin-back, is firmly held in place by means of a steel grip inside of Handle, tightened by thumb-screw, which is nickel-plated.

No. 95. Keyhole Saw and Pad.....\$4.00 per doz.

Extra Blades for No. 95 Keyhole Saw 2.00

## COPING SAW

Fig. 10

Hardwood Handle, Polished, Heavy Steel Ferrule, Nickel-plated and Threaded. Crucible Steel, Nickel-plated. Frame  $\frac{3}{4}$  inch wide,  $\frac{7}{8}$  inch thick,  $4\frac{1}{2}$  inches deep from tooth-edge to inside of back. Length of blade,  $6\frac{1}{2}$  inches from pin to pin.

This is a well-made Coping Saw, more efficient and stronger than the ordinary wire back style. The blade is controlled or adjusted by the two levers when sawing sharp angles, etc., and is easily inserted or removed.

No. 10. Coping Saw, Frame and Blade complete.....\$8.00 per doz.

Extra Blades, Fitted with Pins..... 5.50 per gro.

## "DAVIS" BACK SAW

Fig. 90

Beech Handle, Polished Edge, 10 and 12 inch made with open Handle, 14 inch with closed Handle. All sizes made 12 point only.

No. 9 Davis.....\$8.00 9.00 10.00 per doz.

## DOVETAIL SAW

Fig. 68

Polished Handle, Steel Back, Brass Plated, Extra Quality Spring Steel Blade,  $1\frac{1}{2}$  inches wide under back, 26 Gauge, 17 Points.

No. 68.....\$7.25 7.75 8.75 9.50 per doz.

Same pattern and dimensions as No. 68. Made for cutting brass and copper in sheets or tubes.

No. 69.....\$8.25 8.75 9.75 10.50 per doz.

## KEYHOLE SAW

Beech Handle, Brass Screws

Fig. 15

No. 15. Keyhole Saw.....\$2.25 2.50 2.75 per doz.

Extra blades for No. 15 Keyhole Saw, \$2.00 per doz.

## No. 43 COPING SAW

Fig. 43

Stiff flat spring steel, nickel-plated. Direction of blade controlled by pins in studs at either end of the blade so that it is unnecessary to remove the blade from frame when it is desired to change the direction of the cut. Blades strained by turning of the handle and may be locked facing in any desired direction by turning the handle against frame clamp.

No. 43. Price, including one No. 65 blade with each frame.....\$10.50 per doz.

## No. 44 COPING SAW

Fig. 44

Nickel-plated all wire frame of stiff stock  $\frac{1}{4}$  inch in diameter. Blades may be faced in four directions.

No. 44. Price, per doz. including 1 dozen No. 50 blades with each frame.....\$2.50

## COPING SAW BLADES

Fig. 50

6x $\frac{1}{2}$  inches; turned ends; for Frame No. 44.

No. 50. Price.....\$1.20 per gro.

Fig. 60

6x $\frac{3}{4}$  inches; with pins in the ends. May be used with any Coping Saw Frame taking 6 inch Blades.

No. 60. Price.....\$5.50 per gro.

The same as No. 60, but  $6\frac{1}{2}$  inches long.

4	4½	5	5½	6	6½	7
\$2.20	2.45	2.75	3.02	3.30	3.58	3.85 each.

Triumph Lance Perforated, same price as Triumph Toledo. Both saws ground two gauges thinner on back than on tooth-edge.

## DISSTON'S TWO MAN CROSS CUT SAWS

### TRIUMPH GREAT AMERICAN

4	4½	5	5½	6	6½	7 feet.
\$1.68	1.80	2.10	2.31	2.52	2.73	2.94 each.

Triumph Diamond Tooth, same price as Triumph Great American.

### TRIUMPH CHAMPION

4	4½	5	5½	6	6½	7 feet.
\$1.44	1.62	1.80	1.98	2.16	2.34	2.52 each.

Triumph Plain and Tenon Tooth, same price as Triumph Champion.

### TENON TOOTH, No. 1

No. 1.	Four gauges thinner on back than on tooth-edge,	1	4½	5	5½	6	6½	7	7½	8 feet.
No. 2.	Two gauges thinner on back than on tooth-edge,	\$2.60	2.92	3.25	3.57	3.90	4.22	4.55	4.87	5.20 each.
		2.40	2.70	3.00	3.30	3.60	3.90	4.20	4.50	4.80

### "GREAT AMERICAN" No. 1

No. 1.	Five gauges thinner on back than on tooth-edge,	4	4½	5	5½	6	6½	7	7½	8 feet.
No. 2.	Two gauges thinner on back than on tooth-edge,	\$3.00	3.37	3.75	4.12	4.50	4.87	5.25	5.62	6.00 each.
		2.80	3.15	3.50	3.85	4.20	4.55	4.90	5.25	5.60

### CHAMPION, No. 1

No. 1.	Four gauges thinner on back than on tooth-edge,	4	4½	5	5½	6	6½	7	7½	8 feet.
No. 2.	Two gauges thinner on back than on tooth-edge,	\$2.60	2.92	3.25	3.57	3.90	4.22	4.55	4.87	5.20 each.
		2.40	2.70	3.00	3.30	3.60	3.90	4.20	4.50	4.80

No. 2 only Toothed to ends for Pacific Coast trade. Same Price as No. 2.

### "LUMBERMAN"

No. 1.	Four gauges thinner on back than on tooth-edge,	4	4½	5	5½	6	6½	7	7½	8 feet.
No. 2.	Two gauges thinner on back than on tooth-edge,	\$3.00	3.37	3.75	4.12	4.50	4.87	5.25	5.62	6.00 each.
		2.80	3.15	3.50	3.85	4.20	4.55	4.90	5.25	5.60

### TUTTLE TOOTH, No. 1

No. 1.	Four gauges thinner on back than on tooth-edge,	4	4½	5	5½	6	6½	7	7½	8 feet.
No. 2.	Two gauges thinner on back than on tooth-edge,	\$2.60	2.92	3.25	3.57	3.90	4.22	4.55	4.87	5.20 each.
	Toothed to ends for Pacific Coast trade, 13 and 17 gauge,	2.40	2.70	3.00	3.30	3.60	3.90	4.20	4.50	4.80
	Toothed to ends for Pacific Coast trade, 13 and 15 gauge,	3.50	3.96	4.38	4.82	5.25	5.69	6.12	6.56	7.00
		3.30	3.71	4.13	4.54	4.95	5.36	5.78	6.19	6.60

Add 15% per foot or fraction of a foot on saws over 8 feet in length. Saws less than 4 feet in length take price of 4 feet. Cross-cut Saws thinner than sixteen gauge, extra price. Saws ground thinner on back than catalogued, extra price.

## BAND SAWS

Fig. 131

All Band Saws and Band Resaws are made of Special High-Grade Crucible Steel, hardened and tempered by special processes exclusively their own.

Saws of odd widths, not listed, take price of next wider size listed.

Saws of heavier gauge than listed, add 5% to list for each gauge heavier.

No extra charge for saws one or two gauges thinner than list; when more than two gauges thinner, add 5% to list for each gauge.

**Double-Edge Band Saws:** List price per foot, all widths, advance 10% over list prices of single-edge saws as above.

**Toothed Blanks,** same price as finished saws.

**Band Saw Blanks,** bright, of any width, furnished to order but not warranted.

## Instructions for Ordering

When ordering Band Saws, state whether Right or Left hand, gauge or thickness, space, depth and shape of teeth, straight or crowning back. If the saws are to be crowning on back, we finish them 1/64 in. crowning to each five feet in length, unless otherwise instructed.

	Per foot		Per foot
2 in. wide, 18 to 20 gauge	\$0.80	8 in. wide, 14 to 16 gauge	\$3.20
2 1/2 in. wide, 18 to 20 gauge	1.00	9 in. wide, 14 to 16 gauge	3.60
3 in. wide, 18 to 20 gauge	1.20	10 in. wide, 14 to 16 gauge	4.00
3 1/2 in. wide, 18 to 20 gauge	1.40	11 in. wide, 14 to 16 gauge	4.50
4 in. wide, 17 to 19 gauge	1.60	12 in. wide, 13 to 15 gauge	5.00
4 1/2 in. wide, 17 to 19 gauge	1.80	13 in. wide, 13 to 15 gauge	6.00
5 in. wide, 17 to 19 gauge	2.00	14 in. wide, 13 to 15 gauge	7.00
5 1/2 in. wide, 17 to 19 gauge	2.20	15 in. wide, 12 to 14 gauge	8.50
6 in. wide, 17 to 19 gauge	2.40	16 in. wide, 12 to 14 gauge	10.00

Circular Saws of uneven diameters not listed, take price of next larger size listed.

Circular Saws for Bone, Horn and Ivory, add 50% to above list.

No extra charge for Saws one gauge thicker than list.

No extra charge for Saws one, two or three gauges thinner than list; when more than three gauges thinner, add 5% to list for each gauge.

Circular Saws 48 inches and larger, thinner than 10 gauge, not warranted.

Circular Saws 42 inches or less in diameter beveled one gauge without extra charge; 44 inches and larger, beveled two gauges without extra charge.

Circular Saws hollow ground or concaved, add for each gauge hollow ground or concaved double the price listed for beveling.

LARGER SAWS FURNISHED. PRICES UPON APPLICATION

### "VANDOR" VANADIUM

Special material, combined with extreme care in forging and tempering make this hammer the finest Carpenter Hammer ever produced. The exclusive design of hexagon neck and reinforced claw appeals on sight to a high-grade workman. It is pre-eminently a high-grade craftsman's tool. Made for hard work and lots of it. Packed in individual cartons, six cartons to a container. Has the well known "Vandor" bite to the claw.

## AXES

The material used in the construction of our Axes is of the very best, and the workmanship employed in the forging, grinding and tempering is the most skilled obtainable.

Handles not Furnished with the Axes Listed on This Page  
For Handles see Index

## THE PEERLESS AXE

Gold Bronze Finish; Polished Bit.  
The Single Bit can be furnished in the Michigan and Dayton patterns, and the Double Bit in the Michigan and Western patterns.

Weights: All weights 3 to 6 lbs. Usual assortments are 3 to 4, 3½ to 4½, 4 to 5, 4½ to 5½, 4½ to 6, 5 to 6 lbs. Packed one dozen in a box. Always specify weight and pattern.

## PRICES

Base 2 to 3¾ lbs.

Peerless, single bit.	\$12.00 doz.
Double bit . . . . .	20.00 "
Red Ridge, single bit	10.00 "
Double bit . . . . .	18.00 "

## DOZEN ASSORTMENTS

	Per doz.
3 to 4¼ lbs., advance	\$0.25
3½ to 4½ lbs.,	.50
4 to 5¼ lbs.,	.75
4¾ to 5¾ lbs.,	1.00
5¼ to 6¼ lbs.,	1.25
5¾ to 6¾ lbs.,	1.75
6¼ to 7¼ lbs.,	2.25
6¾ to 8 lbs.,	2.75
All 8 lbs.,	3.25

## RED RIDGE AXES

The Special Ridge Feature makes a larger axe than regular patterns of the same weight, giving a better balance on the handle. Single Bit made in 27 patterns; Double Bit made in 8 different patterns.

Weights: All weights 3 to 8 lbs. Usual assortments are 3 to 4, 3½ to 4½, 4 to 5, 4½ to 5½, 4½ to 6, 5 to 6 lbs. Packed one doz. in a box. Always specify weight and pattern.

## HANDLED AXES

Fig. 191. "Niagara"

Fig. 192. "Fireman's"

Fig. 193. "Usona"

Fig. 193. "Boys'"

## NIAGARA HOLLOW BEVEL

Michigan Pattern

Blue Beveled; Polished Bit. Pole painted red; handled with 36 inch high quality hickory handle. All weights; usual assortment,  $3\frac{1}{2}$  to  $4\frac{1}{2}$  lbs. Packed one dozen in case.

Price per doz., base.....\$10.00

## FIREMEN'S AXE

Regulation Axe, Peerless Brand.

Highest quality; body painted red. Pick and Bit polished. Red handle, 36 inches long.

The increasing tendency for protective ordinances is constantly enlarging the field of this line. It is no longer confined to the hook and ladder truck, or the railroad emergency case, but is now in demand in factories, theatres, hotels and public buildings. The fact that emergency only brings them into use should not be an excuse for inferiority. Get the best and know it will serve you well when the time comes.

Price per doz.,  $4\frac{1}{2}$  lbs.....\$15.00

Price per doz., 6 lbs.....18.00

## USONA HANDLED AXE

A serviceable Axe for general use. Ebony Black Finish; cutting edge only polished. Handled with serviceable 36 inch hickory handle.

Price per doz., base.....\$9.50

## BOYS' HANDLED AXE

Niagara Brand

Same description as Niagara Axe above, with exception of handle, which is 28 inches long. Weight without handle,  $2\frac{1}{4}$  lbs. No. 2 size.

Price per doz.....\$7.50

Fig. 194

## BOY SCOUT AXE

Regulation Boy Scout Axe (with nail slot). Same high quality of material and workmanship as in our men's axes. Sheath made of high grade leather; fastens with snap, and has belt loop.

Complete, per doz.....\$10.00

Axes only (no sheath), per doz.....8.00

Fig. 195

## KEEN RIDGE HUNTER'S AXE

Made of high quality Steel, Gun Metal Body; Fire Blued Bit. Made only in No. 0 size. Has 14 inch hickory handle. Weight,  $1\frac{1}{4}$  lb. without handle.

Price per doz.....\$6.50

## BROAD AXES AND ADZES

Fig. 201. Broad Axe  
Peerless Brand

Gold Bronze Finish; Polished Bit. Recognized as a superior axe in the logging, tie cutting and lumbering industries.

Weight each, lbs.....	6 to 7	7 to 8	8 to 9	9 to 10	10 to 11
Price per doz.....	\$44.00	\$46.00	\$48.00	\$50.00	\$54.00

Fig. 203. Railroad

Fig. 204. Track

Fig. 205. Ship

Our Adzes are hand made from the best material money can buy. The forging is a continuous process which saves several heatings and thoroughly refines the steel. A special feature is the reinforcing of the blade under the eye where the strain is greatest.

**PEERLESS CARPENTERS' ADZE**

Half or Full Head; Gold Bronze Finish. Length of cut 3 to 4 1/2 inches. Packed one dozen in box. We will ship 4 1/2 inch cut unless otherwise ordered.

Price per dozen, cut 3 to 4 1/2 inches.....\$21.00

**FULL HEAD RAILROAD ADZE****American Axe Brand**

Ebony (black) Finish. Cutting Edge Polished. Length of cut, 4 1/2 to 6 inches. A superior tool for railroad work. Packed one dozen in box, assorted 5 to 5 1/2 inches unless otherwise ordered.

Price per dozen, cut 5 to 5 1/2 inches.....\$21.00

**USONA FULL HEAD TRACK ADZE**

Forged Tool Steel. Ebony Finish. Length 4 1/2 to 5 1/2 inches.

Price per doz., cut 4 1/2 to 5 1/2 inches...\$14.00

**PEERLESS SHIP ADZES****Plain or Lipped Pattern**

Black Finish; Polished Bit. Packed 1 dozen in box. Plain Adzes are shipped 4 1/4 inch cut unless otherwise ordered. Lipped pattern, are assorted 5 to 5 1/2 inches unless otherwise ordered. In ordering please state pattern wanted.

Plain pattern, cut 4 to 4 1/2 inches. Price per doz.....\$22.00

Lipped pattern, cut 4 1/2 to 5 1/2 inches. Price per doz.....\$30.00

PEERLESS BRAND HATCHETS

Fig. 211. "Shingling"

Fig. 212. "Half"

Fig. 213. "Lath"

Fig. 214. "Claw"

These Hatchets are all hand forged from highest quality steel and by the most modern processes.

The bits or cutting edges of "Peerless" Brand Hatchets are carefully tempered by a special process that insures uniformity of proper degree.

All "Peerless" Brand Hatchets are fitted with carefully selected second growth all white hickory handles, properly shaped and balanced.

All the Hatchets on this page with the exception of Hurd's "Barreling" Hatchets, are gold bronze finish.

FOR HANDLES, SEE INDEX

## MILLER'S FALLS HAND AND BREAST DRILLS

Fig. 1

No. 1. Tropical wood handles. Malleable iron frame, black enameled. Other metal parts nickelled. Hollow end handle containing eight wood boring points. Removable side grip handle, cut gears, small gear of steel. Ball thrust bearing. Threejaw chuck for round drills 0 to  $\frac{1}{8}$  inch. Length 12  $\frac{1}{2}$  inches. Price each .....\$1.70

Fig. 5

No. 5. Same as No. 1 except that large gear has wide rim and small idler gear is added. Length 12  $\frac{1}{2}$  inches. Price each .....\$2.00

Fig. 104

No. 104. Stained hardwood; malleable iron frame; nickelled chuck. Hollow end handle containing 8 wood boring points. Cut gears with adjustable equalizing bearing. Pinion of steel. Three-jawed chuck holding and centering accurately round shank drills from 0 to  $\frac{1}{8}$  inch in diameter. Jaws are actuated by springs which are protected from injury. Price, per dozen, including 8 fluted drill points .....\$19.00

Fig. 303

No. 303. Hollow main handles of hardwood; solid steel frame. Large gear red; all other metal parts nickelled. Cut gears. Pinion of steel. Detachable side handle. Three-jawed chuck holding round shanks from 0 to  $\frac{1}{8}$  inch in diameter. Length 11  $\frac{1}{4}$  inches. Price, per dozen .....\$17.00

Fig. 980

No. 980. Hardwood handles. Malleable iron frame, other metal parts nickelled. Hollow end handle with receptacle for holding twist drills. Removable side grip handle. Speed instantly changeable. Pinion and shifting device inclosed. Cut gears, small gears of steel. Ball thrust bearing, three-jaw Star chuck with springs protected from injury, takes drills 0 to  $\frac{3}{8}$  inch. Length 15  $\frac{1}{4}$  inches. Price each .....\$3.35

Fig. 12

No. 12. Malleable iron main stock enameled black; chuck and crank nickelled. Breast plate adjustable to different positions and removable. Patent level attachment. Cut gears; large gear with idler roll to equalize bearings. Thoroughly equipped with ball bearings. Extensible crank with radius from 4 to 6 inches. Changeable speed from even to 3 to 1. Master chuck holding round shanks from  $\frac{1}{8}$  to  $\frac{1}{2}$  inch in diameter, all sizes of bit stock and No. 1 taper shanks. Length 17  $\frac{1}{4}$  inches. Price, per dozen .....\$40.00

Fig. 112

No. 112. A popular price Breast Drill of strong, substantial design. Hardwood handles, malleable iron frame, polished Barber chuck with alligator jaws for bit stocks and many sizes of round shanks. Length 15 inches. Price each .....\$2.00

Fig. 19

No. 19. Hardwood handle, cast iron frame, rolled steel main stock. Breast plate adjustable, cut gears, ball thrust bearing, adjustable crank radius 4 to 7 inches. Changeable speed from even to 3 to 1. Barber chuck with alligator jaws. Length 18 inches. Price each .....\$2.25

Fig. 20

No. 20. The same as Drill No. 19 except that chuck is of the Star pattern with three jaws holding round shanks from 0 to  $\frac{1}{2}$  inch in diameter. Jaws are operated by springs that are protected from injury. Price, per dozen .....\$35.00

Fig. 2100

No. 2100. Malleable iron frame; no nickelled parts. Breast plate adjustable to different positions. Instantly changeable speed from 1  $\frac{1}{2}$  to 1 and 4 to 1. Cut gears; small gears of steel. Chuck of Star pattern with 3 jaws operated by springs that are protected from injury; holds round shanks from 0 to  $\frac{1}{2}$  inch in diameter. Length 17  $\frac{1}{4}$  inches. Price, per dozen .....\$42.00

## BRACES AND BORING TOOLS

Fig. 730

**HOLDALL RATCHET BRACE**

Nos. 729 to 734. Ball bearing head. Master chuck has forged steel jaws that conform to the shape of bit held, whether square, taper, or round, from  $\frac{1}{8}$  to  $\frac{1}{2}$  inch. Free acting sweep handle. Patent non-loosening screw holding chuck to sweep. Cocobolo wood and polished and nickeled metal parts.

Sweep, inch..	8	10	12	14
Per dozen .....	\$48.50	52.00	55.50	59.00

Fig. 51

**SILL BORER**

No. 51. Sill Borer or Joist Tool. For use in connection with a bit brace or breast drill in boring at right angles in cramped places and indispensable for car builders, electricians, carpenters and other wood workers. Main frame malleable iron; working parts, including gears, bushings, etc., of hardened steel. Ball bearing and efficient take-ups for bushings in case of wear. Adjustable steadying handle. Patent cup washer (F) and screw (E) to hold head in place without working loose. Length  $16\frac{1}{2}$  inches. Depth of head  $2\frac{1}{2}$  inches. Price, per dozen.. \$30.00

**CORNER BIT BRACES**

Fig. 992

For corner work, when using a bit of ordinary size, these braces will work much faster than a regular ratchet brace.

These Corner Braces are made in two styles, each style in two sizes of sweep. Both styles have metal clad ball bearing heads, and the head and both handles are made of cocobolo. The quill is fastened to the head by three screws, one of which goes through that part of the frame where it enters the head, securely fastening all three together.

The gears are of machine steel, the teeth carefully cut, and the whole mechanism enclosed to protect same from dirt as well as to guard the user's hands.

No. 992 style has Interlocking jaws; No. 993 the Universal pattern. Both are drop-forgings, machined, and have springs for automatic release. All metal parts of brace are nickel plated.

No.	Sweep, inch	Jaws	Package	Per Doz.
992	8	Interlocking	$\frac{1}{2}$ doz., wt. $7\frac{3}{4}$ lbs.	\$33.00
992	10	Interlocking	$\frac{1}{2}$ doz., wt. 7 lbs.	36.00
993	8	Universal	$\frac{1}{2}$ doz., wt. $8\frac{1}{4}$ lbs.	33.00

## CAR BITS AND SHIP AUGERS

Fig. 58. Solid Center Ship Auger Car Bit

Our Solid Center Ship Auger Car Bits measure about 17 inches overall, of which 12 inches is twist. This form of tool with a single spiral around its solid stem has long been popular in auger bit lengths and is meeting with much favor in these longer lengths.

The head of this bit is made of a single cutter with a side lip, but without spur. This permits very easy cutting, but allows a good body of metal for sharpening and wear.

These tools are regularly furnished with twist, round and screw full polished. The sizes listed are carried in stock.

Fig. 59. Solid Center Ship Auger

In common with other tools of the Ship Auger type, Solid Center Ship Augers have a length of twist varying with their diameter. The 4-16 and 5-16 have 8-inch twist; the 6-16, 7-16 and 8-16, 10-inch twist; the 9-16 to 1 inch, 12-inch twist; and those over 1 inch, 15-inch twist.

The shank adds about 5 inches to this length. The square portion of this shank has a considerable body of metal since this is frequently required for welding to an iron handle.

The regular finish is full polished twist, round and screw.

Fig. 62. 8-inch Ship Auger Car Bit

The Ship Auger Car Bit shown above has 8-inch twist and is 12 inches overall.

Fig. 64. Ship Auger Car Bit

This Ship Auger Car Bit is made with 12-inch twist and measures about 17 inches overall, including a shank suited for the ordinary brace. The tool is popular with car builders and all others desiring to bore to the greater depths or in rough timber.

# GEO. B. CARPENTER & CO.

## NO. 48 BELL HANGER DRILL

Our Bell Hanger Drill is made similar to our Brace Drill except for extra length over all as size is fitted with two cutters—the No. 1 size has a No. 1 cutter from  $\frac{5}{8}$  to  $1\frac{1}{4}$  and No. 2 cutter  $4\frac{1}{2}$  inches long and the remainder being round shaft and square shank.

## CLARK'S EXPANSIVE BITS

We offer this as the latest type of expansive bit. It is free in cutting, rigid in position, and easy of adjustment, while having but three pieces removable from the body of the tool.

This bit is made in two sizes, cutting from  $\frac{7}{8}$  to 3 inches and from  $\frac{5}{8}$  to  $1\frac{1}{4}$  inches. Each size is fitted with two cutters—the No. 1 size has a No. 1 cutter from  $\frac{5}{8}$  to  $1\frac{1}{4}$  and No. 2 cutter from  $1\frac{1}{4}$  to  $1\frac{3}{4}$  inches. The No. 2 size has a No. 3 cutter from  $\frac{7}{8}$  to  $1\frac{1}{4}$  and No. 4 cutter from  $1\frac{1}{4}$  to 3 inches.

The adjustment of the cutter is controlled by a worm working in the rack cut on the base of blade. The movement is easy and positive. The cutter is locked securely at any position by a screw which is on the opposite side of the head and does not show in this illustration.

The cutter and adjusting worm are fitted in solid stock, making a strong bit, and they are very accurately fitted to insure perfect adjustment. These tools are finely polished throughout with the square portion of shank left black. They are packed one with its extra cutter in a case and six cases in a box.

Fig. 66 SHIP AUGER, WITH SCREW

L' Hommedieu Pattern

These Ship Augers have a twist varying in length according to size, from 8 inch twist on the 4/16 and 5/16 and 10 inch twist on the 6/16, 7/16 and 8/16, to 12 inch twist on the 9/16 to 1 inch bit and 15 inch twist on larger augers. The overall length exceeds the twist length by about 5 inches.

This tool is fitted with a tang shank as illustrated. The shank has a body of metal sufficient for welding to an iron crank or handle, as is frequently done. The shank may also be used in a wooden handle.

We carry a stock of Ship Augers with screws in all sizes listed, up to and including 4 inch. Regular stock tools  $1\frac{3}{4}$  inches and smaller have full polished twist, round and screw. Larger sizes are full polished except that hollow of twist is coated with a black enamel paint.

## GENUINE MEPHISTO WOOD BITS

The only bit made that is honed like a razor, insuring rapid, smooth and even cutting. Made to exact size, of special grade carefully tempered steel. Fully warranted.

Guaranteed to bore in the hardest woods with ease under any condition with or against the grain, and not to clog. Will not tear the wood, but will bore all the way through without splintering, leaving a perfectly smooth hole.

No. 2400. Polished from tip to tip.

## MACHINE BITS

Fig. 155. Solid Center Machine Bit

Fig. 151. Extension Lip Machine Bit  
Jennings PatternFig. 150. Double Spur Machine Bit  
Snell Pattern

The Double Spur Machine Bit is the general purpose tool and our principal stock is carried in this pattern, as may be noted by the list given below. The bit is suited for very rapid work in all kinds of wood and requires a minimum amount of power.

The lips and cutting edges are carefully proportioned for rapid, easy, smooth cutting, but so constructed as to give the maximum stock for wear and sharpening. This bit may be run as long as a spur remains, and even after that it may be used as a flat cut bit.

We illustrate this bit with a single screw point, as this is more commonly required. We can furnish it with any practical pitch of single or double screw, or with brad point.

The following sizes by sixteenths are regular stock:

4 in. twist with $\frac{1}{2}$ in. shank from $\frac{3}{16}$ to 1 in.	14 in. twist with $\frac{5}{8}$ in. shank from $\frac{7}{16}$ to 2 in.
5 in. twist with $\frac{1}{2}$ in. shank from $\frac{3}{8}$ to 1 in.	16 in. twist with $\frac{5}{8}$ in. shank from $\frac{7}{16}$ to 2 in.
6 in. twist with $\frac{1}{2}$ in. shank from $\frac{3}{8}$ to 2 in.	8 in. twist with $\frac{3}{4}$ in. shank from $\frac{1}{4}$ to 1 in.
8 in. twist with $\frac{1}{2}$ in. shank from $\frac{1}{4}$ to 2 in.	10 in. twist with $\frac{3}{4}$ in. shank from $\frac{1}{4}$ to 2 in.
10 in. twist with $\frac{1}{2}$ in. shank from $\frac{1}{4}$ to 2 in.	12 in. twist with $\frac{3}{4}$ in. shank from $\frac{3}{8}$ to $2\frac{1}{2}$ in.
12 in. twist with $\frac{1}{2}$ in. shank from $\frac{1}{4}$ to 2 in.	14 in. twist with $\frac{3}{4}$ in. shank from $\frac{3}{8}$ to $2\frac{1}{2}$ in.

## WOOD CHISELS

No. 230. Socket Firmer Chisel

With Bevel Edges and Leather Tipped Handle

This No. 230 Socket Firmer Chisel has bevel edges and a leather tipped handle. We give this the same leading position among chisel illustrations that it occupies in all chisel stocks.

The blade of this Chisel measures  $6\frac{1}{4}$  inches from cutting bevel to shoulder. Both blade and socket are carefully polished and the edge is sharpened. The handle is of hardwood, nicely turned and highly finished. The tip consists of three layers of well tanned leather, finished and polished in connection with the wood.

No. 236. Socket Firmer Chisel

With Plain Back and Leather Tipped Handle

The No. 236 Socket Firmer Chisel has a blade with plain back and a handle with leather tip. With the full body of metal in the blade and with the leather capped handle for severe service, this tool is preferred where requirements are extreme.

Fig. 625. Heavy Stripping Knife

This blade is 1 3/4 inches wide, of laid steel, and with both the tool steel and the common steel increased to make this heavier section. The handles are made of hardwood, finished natural. They are formed with considerable enlargement near the end to give better grip.

On special order, we furnish an Extra Heavy Stripping Knife with a blade measuring about 2 1/2 inches wide. This knife has proven very popular wherever used for bark peeling.

The blades are full polished and the shanks enameled black. The handles are fitted with heavy steel ferrules, but no caps are required with this handle.

## SCRAPERS AND SPOKE SHAVES

### SCRAPERS

#### HANDLED SCRAPER No. 80

Fig. 80

Has a blade that may be sprung to a slight curve by means of a thumb screw, giving ease of operation and quickness of cut. The handles are raised to protect the user's hands, and pierced so that the tool can be hung up out of the way. Body and handles cast in one piece.

No. 80, 11 inches long, 2½ inch blade. Japanned. Weight each, 1¾ lbs. . . . per dozen \$12.00  
Packed 1 in Box

#### ADJUSTABLE SCRAPER No. 82

Fig. 82

Has an adjustable single handle which can be tilted to give the blade any angle desired. Special blades of different forms and widths can be securely held in any position required, thus permitting the tool to be worked in many places inaccessible to other scrapers. Handle and knob of hardwood.

No. 82, 14½ inches long, 3 inch blade. Japanned. Weight each 1¾ lbs. . . . per dozen \$12.60  
Packed 1 in Box

#### BOX SCRAPER No. 70

Fig. 70

For removing stencils and other markings from the surface of boxes, floors, etc. It has a large handle, 13 inches in length, hinged to the malleable iron bottom, making it possible to work the tool from any position above the surface. The face of the bottom and the edge of the cutter are slightly curved away from the center, allowing the user to scrape clean any uneven surface. Handle is made of maple.

No. 70, 13 inches long, 2 inch cutter. Japanned. Weight package, 6 lbs. . . . per dozen \$6.00  
Packed ½ Dozen in Box

#### VENEER SCRAPER

Fig. 12

No. 12, 8 in. adjustable, 3 in. cutter, rosewood handles . . . . . each \$2.25  
For scraping and finishing veneers and cabinet work. Also adapted for scraping off old paint and glue.

FOR PAINT, BRUSHES AND ENAMELS, SEE INDEX

### DOUBLE IRON, IMPROVED

Fig. 51

They have a cutter and cap iron, fastened by a thumb screw, in such a manner as to bring an even pressure on the cutter edge, and at the same time allow adjustment without the use of a screwdriver.

No. 51, Raised handle. 10 inches long, 2½ inch cutter. Wt., package, 3¾ lbs. . . . per dozen \$3.50

No. 52, Straight handle. 10 inches long, 2½ inch cutter. Wt., package, 3¾ lbs. . . . per dozen 3.50

Packed ½ Dozen in Box

### ADJUSTABLE SPOKE SHAVES

Fig. 151

These new and improved Spoke Shaves have a lever cap fastening the cutter in such a manner as to bring an even pressure on the cutting edge.

The important feature is that the cutter can be quickly adjusted both endwise and sideways by means of the adjusting screws which engage the slots near the end.

Made in two styles—one with raised and the other with straight handles.

No. 151, Raised handle. 10 inches long, 2½ inch cutter. . . . . per dozen \$6.00

No. 152, Straight handle. 10 inches long, 2½ inch cutter. . . . . per dozen 6.00

### TWO CUTTER

Fig. 60

Has two cutters and separate cutter seats, one hollow and one straight. The two forms of cutters in one tool make it a very handy Spoke Shave.

No. 60, Straight handle. 10 inches long, 1½ inch cutter. Weight, 4¾ lbs. . . . . per dozen \$4.50

Packed ½ Dozen in Box

### UNIVERSAL

Fig. 67

This will be found to be a very handy tool. The handles are detachable, and either one can be screwed into the top of the stock, enabling the user to work into corners or panels, as no other Spoke Shave can do.

A recent improvement is, that one handle has a right and the other a left hand thread, and the proper sockets to receive them are threaded accordingly. This prevents any possibility of the handles working loose when the tool is in use. The handles as well as the sockets in which they belong are lettered to avoid mistakes. Two detachable bottoms are furnished, one for straight and the other for circular work. A movable width gauge allows the tool to be used in rabbeting. All metal parts are nickel plated and the handles are made of rosewood. Extra cutters \$2.00 per dozen.

No. 67, Rosewood handle. 9½ inches long, 1½ inch cutter. Weight, ¾ lb. . . . per dozen \$18.00

Packed 1 in Box

## PLANES

Fig. 4

Fig. 6

Fig. 7C

**"BAILEY" ADJUSTABLE IRON PLANES**

The Planes described below, generally known as Bench Planes, are divided into four classes, namely: **Smooth, Jack, Fore and Jointer.**

A **Smooth Plane** is for finishing or smoothing off flat surfaces. Where the uneven spots are of slight area, its short length will permit it to locate these irregularities, leaving the work with a smooth surface when finished.

A **Jack Plane** is used to true up the edges of a board in the rough and prepare it for the Fore or Jointer.

A **Fore Plane** is simply a short Jointer, and being lighter, is preferred by some workmen to the longer plane.

A **Jointer** is a finishing Plane for large surfaces and is invariably used to true up the edges of boards so that they can be closely fitted or joined together.

"Bailey" Iron Planes have been in use for nearly fifty years and are the recognized standard for Planes of this type. While retaining all the original features, many valuable improvements in construction have been added from time to time. Only the finest materials and the best workmanship are used in their manufacture.

The handle and knob are made of highly finished, thoroughly seasoned rosewood.

Planes with bottoms either flat or corrugated (see Fig. 7C) furnished as desired. The number with a "C" designates Corrugated Bottom.

No. 4 or 4C. Smooth. 9 inches long. 2 inch cutter. Weight, 3 1/4 lbs.....	each	\$2.20
No. 5 or 5C. Jack. 14 inches long. 2 inch cutter. Weight, 4 1/4 lbs.....	each	2.50
No. 6 or 6C. Fore. 18 inches long. 2 1/2 inch cutter. Weight, 7 1/4 lbs.....	each	3.25
No. 7 or 7C. Jointer. 22 inches long. 2 1/2 inch cutter. Weight, 8 1/4 lbs.....	each	3.75
Packed 1 in Box		

Fig. 10 1/2

**CARRIAGE MAKERS' RABBIT PLANES**

Especially adapted for the heavy framing required in mining work, for carriage or wagon building, or any work of similar nature.

No. 10 1/2 or 10 1/2 C. 9 inches long. 2 1/4 inch cutter. Weight, 3 lbs.....	each	\$2.50
--	------	--------

FOR PLUMB BOBS AND LEVELS, SEE INDEX

Fig. 24

Fig. 27

**"BAILEY" WOOD PLANES**

Every carpenter needs two or more Wood Planes in his kit, for rough outside work.

"Bailey" Wood Planes supply the demand for a Wood Plane of superior quality. The bottom, handle, and knob are made from selected and well seasoned beech. The cutters are the regular "Bailey" type and are adjustable both endwise and sidewise.

No. 21. Smooth. 7 inches long. 1 1/4 inch cutter. Weight, 2 1/2 lbs.....	each	\$1.50
No. 24. Smooth. 8 inches long. 2 inch cutter. Weight, 2 1/2 lbs.....	each	1.50
No. 27. Jack. 15 inches long. 2 1/2 inch cutter. Weight, 4 lbs.....	each	1.90

Fig. 113

**CIRCULAR PLANES**

These Planes have flexible steel faces, which can be accurately adjusted for planing the inside or outside of circles. The cutters are the same as in the "Bailey" Planes.

No. 113 is the original design for this class of tools, and has been well known for many years. The face is fastened at its center to the Plane body, and adjusted at the ends by means of a screw and levers.

No. 113. Japanned. 10 inches long. 1 1/4 inch cutter. Weight, 3 1/2 lbs.....	each	\$3.00
Packed 1 in Box		

## BLOCK PLANES

Fig. 9 1/2 and 16

Fig. 18-19

Fig. 60-60 1/2  
Low Angle Block

### "BAILEY" ADJUSTABLE BLOCK PLANES

A Block Plane was first made to meet the demand for a plane which could be easily held in one hand while planing across the grain, particularly the ends of boards, etc. This latter work many carpenters call "blocking in," hence the name "Block" Plane.

Nos. 18 and 19 are distinctive in the method of fastening the cutter. These planes are now fitted with a new and patented form of lever or cap, which being entirely of steel, makes it practically indestructible. This new knuckle joint permits of great leverage, consequently the lever can be placed in position or removed with very little effort—a great improvement over the old form of knuckle joint lever.

No.	Length, Inches	Cutter, inches	Trimmings	Weight, lbs.	Each
9 1/2	6	1 1/8	Japan	1 1/2	\$1.10
15	7	1 1/8	Japan	1 1/2	1.20
16	7	1 1/8	Nickel	1 1/2	1.25
17	7	1 1/8	Nickel	1 1/2	1.35
9 3/4	6	1 1/8	Japan, rosewood handle	1 1/2	1.30
15 1/2	6	1 1/8	Japan, rosewood handle	1 1/2	1.40
18	6	1 1/8	Nickel, knuckle joint	1 1/2	1.30
19	7	1 1/8	Nickel, knuckle joint	1 1/2	1.40

Packed 1 in Box.

### LOW-ANGLE BLOCK PLANES

These Planes are designed to meet the demand for block planes having the cutters lying at a still lower angle than 20 degrees.

In the Low-Angle Planes the cutter rests on its seat at an angle of only 12 degrees. This angle permits of great ease in working across the grain on hard woods.

No.	Length, Inches	Cutter, inches	Trimmings	Weight, lbs.	Each
65	7	1 1/8	Nickel, knuckle joint	1 1/2	\$1.35
65 1/2	7	1 1/8	Japan	1 1/2	1.20
60	6	1 1/8	Nickel	1 1/2	1.25
60 1/2	6	1 1/8	Japan	1 1/2	1.10
62	14	2	Japan	3 1/2	2.85
61	6	1 1/8	Nickel	1 1/2	1.10
63	7	1 1/8	Nickel	1 1/2	1.30

Packed 1 in Box.

Fig. 130  
Double End Block

Fig. 220  
Adjustable Block

Fig. 110  
Non-Adjustable Block

### DOUBLE-END BLOCK PLANES

Has two slots and two cutter seats, the center seat and slot to be used for ordinary block plane work, the other slot and seat for use when it is desired to work same as a bull nose plane. The plane has a hardwood knob.

No. 130. 8 in. long, 1 1/8 in. cutter, Japan trimmings, packed 1 in box, weight 1 1/2 lbs. each \$0.75

### ADJUSTABLE BLOCK PLANES

No. 203 is a new plane designed especially for manual training use. The cutter is secured in its place by a lever fastened with a cam. It is adjustable endwise by means of the thumb screw shown at the rear of the plane. The knob is of rosewood and serves as a finger rest.

No. 220 is in many ways better adapted for average use than any of the cheaper block planes made. The cutter is made of high grade steel, is fastened by a lever and cam, and is adjustable endwise by a screw adjustment operated from the rear of the plane. The knob or finger rest on the front of the plane is made of rosewood.

No. 103 is for light work. The cutter is adjustable endwise, the form of adjustment being known as the lever adjustment. The bottom is ground true and the sides neatly japanned.

No. 120 is similar in design to the No. 103, having the same form of cutter adjustment and cutter fastening device. However, in this plane the sides are ground, care being taken to have them parallel and, instead of the iron boss on the front of the plane, it is fitted with a rosewood knob which forms a convenient finger rest.

No.	Length, Inches	Cutter, inches	Adjustment	Weight, lbs.	Each
203	5 1/2	1 1/8	Screw	1 1/2	\$0.85
220	7 1/2	1 1/8	Screw	1 1/2	.75
103	5 1/2	1 1/8	Lever	7/8	.55
120	7 1/2	1 1/8	Lever	1 1/2	.75

Packed 1 in Box.

### NON-ADJUSTABLE BLOCK PLANES

No. 101, only 3 1/4 inches in length, can be used for a variety of purposes. It is a very handy little plane for household use and many mechanics carry one in their kits for odds and ends of light work.

No. 100 is the same in all respects as the No. 101 except that it has an iron handle which just fits nicely into the palm of the hand, insuring the workman a firmer grip than is possible with the No. 101.

No. 102 is a light, serviceable plane, 5 1/2 inches long. The bottom is ground and the sides japanned.

No. 110 is the most popular of all the non-adjustable block planes. Both the bottoms and sides are ground and in place of the boss cast on the front for a finger rest, it has an apple-wood knob, stained black.

For those desiring a plane for ordinary work that does not require that the tool be frequently adjusted, we strongly recommend this line.

No.	Length, Inches	Cutter, inches	Package	Weight, lbs.	Each
101	3 1/4	1	6 only	1 1/2	\$0.20
100	3 1/4	1	1 only	7/8	.25
102	5 1/2	1 1/8	1 only	7/8	.40
110	7 1/2	1 1/8	1 only	1 1/2	.65

## MISCELLANEOUS PLANES

## BULL NOSE RABBIT PLANE

Fig. 75

Will be found very useful for working close up into corners or other difficult places. The mouth can be adjusted for different widths by means of the set screw on top of the plane.

No. 75. 4 inches long, 1 inch cutter, Japan trimmings. each \$0.40  
Weight  $\frac{3}{4}$  lb. Packed 1 in Box

## DOUBLE END MATCH PLANES

Fig. 146

for end. The Planes are nickel plated and have iron handles cast with the body.

No. 146. Cuts  $\frac{1}{2}$  inch groove, on boards  $\frac{1}{2}$  inch to  $\frac{1}{2}$  inch centers on  $\frac{1}{2}$  inch, weight  $1\frac{1}{2}$  lbs. each \$2.20  
No. 147. Cuts  $\frac{3}{16}$  inch groove, on boards  $\frac{1}{2}$  inch to  $\frac{1}{2}$  inch centers on  $\frac{1}{2}$  inch, weight  $1\frac{1}{2}$  lbs. each 2.20  
No. 148. Cuts  $\frac{1}{4}$  inch groove, on boards  $\frac{1}{2}$  inch to 1 inch centers on  $\frac{1}{2}$  inch, weight 2 lbs. each 2.20  
Packed 1 in Box

## ROUTER PLANES

of the chip, and a second attachment for closing the throat for use on narrow surfaces. The bottoms of both styles are designed so that an extra wooden bottom of any size desired can be screwed on, enabling the user to router on large openings.

A  $\frac{1}{4}$  and  $\frac{1}{2}$  inch cutter are furnished with each Plane. Cutters have screw adjustment and can be held as shown in illustrations, or on the back of the cutter post, for bull-nose work.  
No. 71.  $7\frac{1}{2}$  inches long. Open throat. Nickel plated. Weight, 2 $\frac{1}{2}$  lbs. each \$2.05  
No. 71 $\frac{1}{2}$ .  $7\frac{1}{2}$  inches long. Closed throat. Nickel plated. Weight, 2 $\frac{1}{2}$  lbs. each 1.65  
Packed 1 in Box

## SKEW CUTTER FILLETSTER AND RABBIT PLANE

Fig. 280

of the cut. Remove arms and fence, and a Skew Cutter Rabbit Plane is obtained.

No. 280.  $8\frac{1}{2}$  inches long.  $1\frac{1}{2}$  inch cutter. Japanned. Weight,  $3\frac{1}{4}$  lbs. each \$1.75  
Packed 1 in Box

## RABBIT AND FILLETSTER PLANE

Fig. 278

attached to either side, the Plane is suitable for either right or left hand work. The front part of the Plane can be easily detached, thus providing a bull-nose Plane for working close up into corners or other difficult places. The cutter is adjustable endwise.

No. 278.  $6\frac{1}{2}$  inches long. 1 inch cutter. Weight, 2 lbs. each \$1.75  
Packed 1 in Box

## DUPLEX, FILLETSTER AND RABBIT PLANE

Fig. 78

No. 78.  $8\frac{1}{2}$  inches long.  $1\frac{1}{2}$  inch cutter. Japanned. Weight, 3 lbs. each \$1.65  
Packed 1 in Box

## BELT MAKERS' PLANE

Fig. 11

the back of the Plane. Hardwood handle.

No. 11.  $5\frac{1}{2}$  inches long.  $2\frac{1}{2}$  inch cutter. Japanned. Weight,  $3\frac{1}{2}$  lbs. each \$2.20  
Packed 1 in Box

## STANLEY JOINTER GAUGE FOR IRON PLANES

Fig. 386

It may be attached to either side of the Plane making it equally adaptable for right or left hand work.

All metal parts are nickel plated.  
No. 386. 1 only in box. Weight,  $2\frac{1}{4}$  lbs. each \$1.75

The sides and bottom being square with each other, the Plane will lie perfectly flat on either side. It has an adjustable fence which slides under the bottom, regulating the width of the cut. It is fitted with two spurs, one on each side, for working across the grain—also an adjustable depth gauge. As both the fence and the depth gauge can be

This Plane has two seats for the cutter, one for regular work and the other where a bull-nose is required. It has a spur and a removable depth gauge. The adjustable fence can be used on either side and slides under the bottom, regulating the width of the cut. To work same as a rabbit plane, remove fence and arms.

A Plane designed for chamfering down the ends or laps of a belt before fastening together. Plane is fitted with adjustable throat, by means of which a wide or narrow opening may be given to the mouth, or slot, for the cutter. Cutter is adjustable endwise by means of the screw shown at

For use in connection with all sizes of Iron Jack or Jointer Planes.

To enable the workman to plane bevels of any angle between 30 and 90 degrees, or to square up the edges of boards with extreme accuracy.

## BORING TOOLS AND ATTACHMENTS

Fig. 565

For railroad construction and heavy bridge work. We will weld handles of any size desired to bits with or without starting screws as desired. Ship augers are generally used for this purpose, but we can furnish handles welded to any kind of a bit you may have need for. These are welded in our own shop, and to order only. Prices upon application. When ordering state length of handle and style of bit wanted. Always allow one day extra for the welding of these handles to bits.

### AUGER HANDLES

Fig. 5651

Hickory.....per dozen \$0.70

### PRATT'S PATENT AUGER HANDLE

Fig. 5652

Stout ash wood handle.  
Steel band, three inches long, split longitudinally, opens to admit all sizes and shapes of auger shanks, excepting largest sizes of ship augers. Center augers correctly.

Nos. ....	1	2
Length, inches.....	14	17
Weight, per dozen, lbs.....	16	18
Price, per dozen.....	\$7.60	\$8.00

Packed ½ dozen in a pasteboard box.

### AUGER HANDLE

Fig. 03

No. 03. Body casting malleable iron; screw steel; handles ash. A light, strong handle. Length, 16 inches. Weight, per dozen, 18 lbs.....per dozen \$7.00

### RATCHET AUGER HANDLE

Fig. 5654

Ash wood and metal parts nicked. Chuck jaws admit almost all sizes of bit stock and auger shanks.

Detachable handle upon which wood revolves. Ratchet works either to right or left or may be locked so that the tool may be used without ratchet. Length, 15 inches.

Price, per dozen.....\$32.00

### BORING MACHINE

This machine is carefully made and will render accurate service. The rack is strong and will not slip. Upright wood frame; adjustable depth gauge; self withdrawing auger. Weight about 35 lbs.

Price, without augers.....\$6.20

### BERGMAN IMPROVED CROSS BORING TOOL

WITH SLIDING FOOTREST

A tool well adapted for boat builders' use. For boring limber holes and many other purposes. Uses regular auger bits. Nickel plated finish.

Price, each.....\$5.00

FOR SHIP AUGERS, BORING AND MACHINE AUGERS, SEE INDEX

## HOLLOW HANDLE TOOL SETS

Fig. 300

**No. 300.** An exceptionally strong, well made, well finished Tool Set. The illustration shows same about two-fifths actual size.

Handle is of cocobolo, highly polished; screw cap which covers the recess containing the tools is fitted with a steel strike plate. Jaws are case-hardened, have a gun metal finish, and are held open by a spring. The chuck body is of large diameter, well threaded, and machined to receive the jaws. The shell is extra heavy, carefully knurled, and nickel plated.

With each handle, 10 tools are furnished as follows: 1 each gimlet, file, saw, gouge, chisel, reamer, brad awl, scratch awl, and 2 screwdrivers. All are made of special tool steel, hardened, tempered and polished, and are approximately 4 inches long.

An extra saw 6 3/4 inches long is furnished if desired, at \$0.60 per dozen extra.

**No. 300.** Cocobolo handle, polished, length over all 7 3/4 inches.....per dozen \$24.00  
Packed 1 in Box

Fig. 301

**No. 301.** This Tool Set is similar in size and general design to the above set, although there is no strike plate in the screw cap on the end of the handle. The chuck body is of less diameter, consequently lighter, and the jaws are of malleable iron and are permanently secured in the chuck body. The shells are knurled, and the shells, jaws and ferrules are nickel plated.

With each handle, 8 tools are furnished as follows: 1 each gimlet, file, saw, gouge, chisel, reamer, and 2 screwdrivers. All are made of special tool steel, hardened, tempered and polished, and are approximately 4 inches long.

An extra saw 6 3/4 inches long is furnished if desired, at \$0.60 per dozen extra.

**No. 301.** Cocobolo handle, polished, length over all 7 3/4 inches.....per dozen \$15.00  
Packed 1/2 Dozen in Box

Fig. 303

**No. 303.** This number is a good serviceable set, though not so large and with smaller tools than the numbers described above. The tools are contained in the handle and are protected by a screw cap. The illustration shows same about two-fifths actual size.

The jaws are of malleable iron and permanently secured in the chuck body.

The tools are held in the jaws by means of a malleable iron wing nut, and the nut, jaws and ferrule are nickel plated.

With each handle, 10 tools are furnished as follows: 1 each gimlet, gouge, chisel, scratch awl, screwdriver, tack puller and 4 assorted brad awls, hardened, tempered and with polished tips. They are approximately 2 1/2 inches long.

**No. 303.** Cocobolo handle, polished, length over all 5 1/4 inches.....per dozen \$0.00  
Packed 1/2 Dozen in Box

FOR WOOD SCREWS, STOVE BOLTS

Fig. 8

## AUTOMATIC STAR POCKET BORER

Handsomely knurled and nicked steel. May be compressed into convenient size for the pocket. Magazine handle containing 8 drill points ranging from 1/16 to 11/64 inch in diameter, and a screw-driver bit. Has a device for releasing a bit from the handle without disturbing the others. Screw-driver can be used when tool is compressed. Chuck has positive grip.

Length extended, 7 1/4 inches; compressed, 4 1/2 inches. Weight per dozen in pasteboard boxes, 8 1/2 lbs.

List price per dozen.....\$23.00

Fig. 180

## AUTOMATIC BORING TOOL

Handsomely all-steel, knurled and nickel plated handle. Has same sized drills as outfit listed above; each in a separate cell in handle, which can be removed without disturbing the other drills; number and size stamped on the handle over the corresponding cell. Chuck has positive grip. Weight per dozen, 8 lbs; length, 10 1/2 inches. Packed one in pasteboard box.

List price per dozen.....\$19.75

## SCREW DRIVERS

### "YANKEE" SPIRAL RATCHET SCREWDRIVERS

Fig. 30

Fig. 30. The standard size. Drives or draws screws by pushing on handle or by ratchet movement of handle. Can be made rigid as an ordinary screw driver by an ingenious locking device when closed. Packed one only in paper box. Weight per dozen, in paper boxes 13 lbs. 13 oz.

Price .....each \$1.50

Fig. 130. This is the regular pattern Fig. 30 with a spring added in handle which causes the handle to come back for the next push in driving screws in or out. It is a "quick return" and more rapid as well as convenient in practical use, than pulling the handle back. Extreme length with bit in chuck, 20 1/2 inches extended. Closed the extreme length with bit in chuck is 15 inches. Packed one only in paper box. Weight per dozen in paper boxes, 14 lbs. 8 oz.

Price .....each \$2.00

Fig. 31

Fig. 31. Same design as Fig. 30, but is made considerably heavier and stronger throughout, for use in car shops, etc., where heavy screws are required to be driven or drawn. Three bits of different widths are included with each tool. The extreme length of tool with bit in chuck is 17 1/2 inches when closed, and 25 1/2 inches when extended. Packed only one in paper box. Weight per dozen, in paper boxes, 20 lbs. 8 oz.

Price .....each \$2.35

Fig. 131. The regular Fig. 31 with a spring added in handle, which causes the handle to come back for the next push in driving screws in or out. Extreme length of tool with bit in chuck, 25 inches extended. Can be closed and locked with the milled collar in front of shifter case if desired. Extreme length closed, with bit in chuck, 19 3/4 inches. Packed one only in paper box. Weight per dozen, in paper boxes, 24 lbs. 8 oz.

Price .....each \$2.65

Fig. 35

Fig. 35. Intended for electrical workers, cabinet makers, carpenters and mechanics having a large number of small screws to drive, and where a lighter tool will be much more sensitive and convenient than the standard pattern or Fig. 30. Small enough to be conveniently carried in the pocket, measuring 7 inches long when closed (without bit) and weighing complete less than 7 ounces. The bits are straight, so they can be used to drive screws through holes in insulators, etc., where the flattened blades will not pass through holes. Extra long bits can be supplied for this tool. The length of tool with bit in chuck is 9 1/2 inches when closed and 12 3/4 inches when extended. Packed one only in paper box. Weight per dozen, in paper boxes, 6 lbs. 5 oz.

Price .....each \$1.35

Fig. 135. Same as Fig. 35, with spring in handle. Extreme length closed, with bit in chuck, 10 inches. Extreme length extended, with bit in chuck, 13 1/4 inches. Packed one only in paper box. Weight per dozen, in paper boxes, 7 lbs. 8 oz.

### AUTOMATIC DRILL

Fig. 41

Made of steel and brass, nickel plated and buffed. Has eight drill points, 1/2 to 1 1/2 inch, which are in plain sight when magazine is open. During the return movement of handle the drill point revolves backward to clear chips, etc. Entire length of tool, inclusive of drill point, 11 3/4 inches. Packed one only in paper box. Weight per dozen, in paper box, 7 lbs. 13 oz.

Price .....each \$1.60

### AUTOMATIC DRILL With Adjustable Tension

Fig. 44

In this drill the cap on top of drill has a screw attached to it, by revolving which the spring is made longer or shorter, and as a result weaker or stronger, to suit work in hand and save breakage of drill points. The spring is held at any desired tension by a small bolt engaging in cap and operated by the small knob on side of handle. Has eight drill points, 1/2 to 1 1/2 inch, in magazine in handle, arranged to show all in plain sight. Made of steel and brass, nickel plated and buffed. Entire length of tool, inclusive of drill points, 11 1/2 inches. Packed one only in paper box. Weight per dozen, in paper box, 9 lbs.

Price .....each \$1.85

Cut shows actual size drill points for Nos. 41 and 44. Extra Sets. ....per set \$0.55

### RATCHET SCREW DRIVER Right and Left Hand, and Rigid

Fig. 15

Made to meet a demand for a light blade screw driver for small screws in electric work, etc. It has on its blade a knurled washer, permitting turning the blade with finger and thumb. In all sizes named below the blade is 5/8 inch diameter, and handles are same, the only difference being in the length of the blades. Packed one-half dozen in box.

Sizes Length of Blade, in.	Entire Length, in.	Weight per doz. in Paper Box	Price each

### ADJUSTABLE TRY AND MITRE SQUARE

Fig. 21

One of the handiest tools in a Carpenter's Kit. Especially useful for doing short work about windows, doors, etc., or in putting on butts or locks.

The blade is adjustable and as it can be reversed, provides any size of try or mitre square within the capacity of the tool. In reversing, it is not necessary to remove the blade from the handle, consequently the tool is always assembled and ready for use.

The locking device is such as to insure the blade being firmly and accurately secured at any point desired. The edges of the blade are machined, graduated in 8ths, 16ths, and 32ds of inches, and the tool is square inside and out.

It is also an excellent depth and marking gauge.

Both handle and blade are nickel plated. Made in three sizes.

No. 21

6 inch blade, weight 3/4 lb.....	per doz.	\$6.60
9 inch blade, weight 1 1/2 lb.....	"	7.80
12 inch blade, weight 2 1/2 lb.....	"	9.25

FOR STARRETT'S SQUARES AND BEVELS, SEE INDEX

### TRY SQUARES

#### Iron Handle

Fig. 12

Both edges and the ends of the handles are machined. The slots for the blades are accurately sawed, and the blades securely fastened in same by means of three large rivets. Both handles and blades are nickel plated.

The blades are made of high grade steel. They are regularly graduated in eighths of inches, but, if desired, can be graduated in Metric without additional charge.

They are made in six sizes, from 2 to 12 inch blades, with proportionate size handles.

No. 12

#### Nickel Plated

## MITRE BOXES—MALLET

## LANGDON ACME MITRE BOX

Made of iron and steel. Automatic device to hold saw above the work when desired. Extra long saw guides for stability. Quickly adjusted swinging lever that can be locked at positive angles or at intermediate points. Work supports that can be used also to get angles more acute than forty-five degrees. Supporting gib beneath the saw to prevent splintering at the end of the cut.

Fig. 68

No.	Size	Diam. of Saw inches	Cap. at Right Angle inches	Cap. at Mitre inches	Weight Box lbs.	Weight Net lbs.	Price
68	1	22x4	7 1/2	5	34	23	\$12.00

75	2 1/2	30x5	10 1/4	7	38	25 1/2	16.00

## MITRE BOXES

These boxes are compact, strong and durable and are quickly put together or taken apart for convenience in carrying.

The entire frame is one solid casting, insuring great strength.

The saw guide uprights are securely clamped in tapered sockets in the swivel arm and can be adjusted to hold the saw without play, and also to counteract a saw that runs out of true, due to improper setting or filing. This is a new feature that will be appreciated.

The second socket in the swivel arm permits the use of a short saw or allows a much longer stroke with a standard or regular saw.

The swivel arm is provided with a tapered index pin which engages in holes placed on the under side of the base. These holes are made at the commonly used angles as designated on top of the base allowing 3, 4, 5, 6, 8, 12 and 24 sided pieces to be cut. The edge of the base is graduated in degrees and the swivel arm can be set and automatically fastened at any degree desired. This automatic fastening device holds the swivel arm firmly to the base in all positions.

The uprights, front and back, are graduated in sixteenths of inches, and movable stops can be set, by means of thumb, screws to the depth of the cut desired.

Stock guides hold all kinds of ordinary work, as well as irregular forms, and can be used as length gauges for duplicating short pieces.

Automatic catches on the uprights hold the saw up, which allows the use of both hands in placing the work. The adjustable stop on top of the saw, coming in contact with the lever trip, releases the front catch, and the saw in falling pitches slightly forward automatically releasing the rear catch, without any necessity of taking the hand from the saw or touching the lever trip. Two cone pointed leveling screws on the rear feet prevent the box sliding when in use. These boxes are regularly packed with back saws made by Henry Disston and Sons, Inc.

## PLUMBS AND LEVELS

Fig. 30

## Fig. 30. DUPLEX ADJUSTABLE PLUMBS AND LEVELS

These Levels can be read conveniently, even if held at arm's length above the head. They have three glasses: A level glass set in the top in the usual way, a plumb glass, and a second level glass set in the side. These latter two glasses are set close to one surface of the stock so that the angle of vision of the bubble is greatly increased. The second level glass can be readily reversed to form a second plumb, if desired.

They are made from 1½x3¼ inch selected stock, in 24, 26, 28 and 30 inch lengths.  
 No. 30. Hardwood, brass tips, 24 to 30 inches long; ½ dozen in 24 lb. package.....per dozen \$18.00  
 No. 30. Hardwood, 3 ply, brass tips, brass lips, 24 to 30 inches long; ½ dozen in 24 lb. package..... " 24.00  
 No. 25. Mahogany, brass tips, brass lips, 24 to 30 inches long; ½ dozen in 25 lb. package..... " 24.00

Fig. 31. Non-Adjustable

Fig. 32. Adjustable

These Levels need no introduction to the hardware trade as they are of the design and workmanship that have been known as standard for nearly half a century.

They are made from 1½x3¼ inch stock and in four lengths of two inches difference.

## Non-adjustable

No. 0. Hardwood, 24 to 30 inches long; ½ dozen in 20 lb. package.....per dozen \$9.60

## Adjustable

No. 3. Hardwood, brass tips, 24 to 30 inches long; ½ dozen in 22 lb. package.....per dozen \$15.00

Fig. 47

## MASON'S SIX-GLASS PLUMBS AND LEVELS

These Levels have two level glasses and four plumb glasses so arranged that no matter how the tool is taken up, one or more of them are available with which to level or plumb.

Each glass is set solid in a metal case, which case is screwed into the level stock.

Each level and plumb glass is protected on both sides of the stock by a glass disc which serves not only to protect the glass from breakage but keeps dirt and moisture from the openings.

The level stock is made of light weight wood, thoroughly seasoned and specially prepared. It is 3¼ inches wide by 1½ inches thick.

Two hand holes are provided for convenience and safety in handling.

Made in two sizes, 42 and 48 inches long.

No. 47. 42 inches long, 6 proved glasses.....per dozen \$36.00  
 No. 48. 48 inches long, 6 proved glasses..... " 39.00

Fig. 36

Fig. 37

## METALLIC PLUMBS AND LEVELS

No. 36 has top and bottom milled and wet ground to insure two perfectly parallel surfaces. The glasses are so set that either surface may be used to level or plumb. They are set in metal cases which fit accurately on supports cast in the frame of the level. The cases are held on the supports by means of eccentric cone centers at each end, with screw adjustment.

These Levels are also made with a grooved bottom for working on shafting, piping, etc., without extra charge. In ordering, use the numbers 36G-6 inch, 36G-9 inch, etc.

No. 37 is of the same general design as the No. 36. The levels, however, have ground glasses, are full nickel plated, and the glasses are protected. This latter feature consists of a shell or cover, termed "Eclipse Case." When the level is not in use this case can be turned so as to completely protect the glass from damage.

These Levels are also made with a grooved bottom for working on shafting, piping, etc., without extra charge. In ordering, use the numbers 37G-6 inch, 37G-9 inch, etc.

## PLUMBS AND LEVELS AND ACCESSORIES

Fig. 104

## SMALL PLUMBS AND LEVELS

They are especially adapted for use by millwrights, plumbers, or for any work where a level of greater length and cross-section cannot be readily used. These levels are not adjustable.

Nos. 102, 103, 104 made from  $1\frac{1}{4} \times 2\frac{1}{2}$  inch. No. 104 $\frac{1}{2}$  and 1 $\frac{1}{4}$  from  $1\frac{1}{4} \times 2\frac{1}{8}$  inch, and No. 1 $\frac{1}{2}$  from  $1\frac{1}{4} \times 2\frac{1}{2}$  inch stock.

They are made in four lengths of two inches difference (see below).

No. 102.	Hardwood, levels only, 10 to 16 inches long, 1 dozen in 11 lb. package.....	per doz. \$ 4.80
No. 103.	Hardwood, levels only, 18 to 24 inches long, 1 dozen in 23 lb. package.....	per doz. 6.00

FOR TRANSITS, LEVELS AND RODS, SEE INDEX

## GAUGES AND TRAMMEL POINTS

Fig. 61

Fig. 65

## WOOD MARKING GAUGES

These Marking Gauges are made of selected wood. The bars are oval in form and are graduated in 16ths of an inch for 8 inches from the point. Gauges having a brass thumb screw have the bar protected by a brass shoe. Face plates are brass plates inserted in the head to prevent wear. The marking points (one each) are of tempered steel. The marking point in No. 65 is securely locked by a screw and can be readily removed for sharpening.

No. 61. Beech, boxwood screw, square head. 1 dozen in 2 1/2 lb. package. . . . . per dozen \$0.96

No. 65. Boxwood, brass screw, square head, face plate. 1/2 dozen in 1 1/2 lb. package. Per dozen . . . . . 4.20

Fig. 95

## BUTT GAUGES

In hanging doors, there are three measurements to be marked—the location of butt on the casing, the location of butt on the door, and the thickness of butt on both casing and door. The term "Butt Gauge" covers a gauge having three cutters, purposefully arranged so that no change of setting is necessary when hanging several doors. In reality these tools comprise Rabbet Gauges, Marking Gauges and Mortise Gauges of a scope sufficient for all door trim, including lock plates, strike plates, etc.

All bars are locked by set screws and are graduated in sixteenths of an inch.

No. 95. Iron body, steel bars, nickel plated; 1 only in 1/2 lb. package. . . . . per dozen \$9.00

## TRAMMEL POINTS

Fig. 99

A practical form of trammel points, adapted for convenient use on a carpenter's rule. They can be attached to folding rules of any ordinary width; and on many kinds of work will take the place of regular trammel points, calipers or dividers. A complete set consists of two brass trammel heads, with movable steel points, and one head with a pencil socket.

No. 99. Stanley's rule, in sets of three. per set \$0.50

Fig. 97

Fig. 98

## METAL BAR GAUGES

These gauges have steel bars, and the heads are machined castings. Pin point cutters are used. The bars in those gauges having a metal head can be set so that either a narrow or wide gauging surface is obtained. Where two cutters are fitted on one bar, there are graduations for each cutter.

All parts are finely finished, and the metal bars and heads are nickel plated.

Mortise Gauges have double bars, 6 1/2 inches long, graduated in sixteenths of an inch for five inches.

No. 98. Metal head, pin points; 1 only in 1/2 lb. package. . . . . per dozen \$6.72

Marking Gauges have a single bar, 6 1/2 inches long, graduated in sixteenths of an inch for five inches.

No. 97. Metal head, pin point; 1 only in 1/2 lb. package. . . . . per dozen \$3.48

Fig. 1, 2, 3

Fig. 8

## TRAMMEL POINTS AND PENCIL CLASP

Used by millwrights, carpenters, machinists and all mechanics having occasion to strike arcs or circles larger than can be conveniently done with ordinary compass dividers.

## Nickel Trammel Points

Can be attached to one side of any straight stick. The pencil socket will take an ordinary sized pencil, or a full sized oval shaped carpenter's pencil.

No. 4. Trammel Point, for straight edge up to 1 1/4 inches; 1 set in 1/4 lb. package. Per dozen sets. . . . . \$9.00

## Bronze Trammel Points

Strongly constructed and have steel points, on either of which an accompanying pencil socket can be clamped.

No. 1. Trammel Point, for 5/8 inch straight edge; 1 set in 1/4 lb. package. . . per dozen sets \$14.40

No. 2. Trammel Point, for 1 inch straight edge; 1 set in 1/4 lb. package. . . per dozen sets 18.00

No. 3. Trammel Point, for 1 1/4 inch straight edge; 1 set in 1/4 lb. package. . . per dozen sets 25.00

## Patent Pencil Clasp

For attaching to a pair of ordinary dividers. Twelve mounted on attractive display card.

No. 8. Pencil Clasp, 1 1/4 inches long, nickel plated, 2 dozen in 1 lb. package. . . per dozen \$1.25

## CLAMPS AND HAND SCREWS

Fig. 71  
HORSE CLAMP

This clamp opens up to six feet and holds firmly. The top bar or beam is made of hard maple and is 2 1/2 x 4 inches. It has iron clamp head, double nut with 1 1/2 inch iron screw.

Horse Clamps, complete ..... \$12.00  
Horse Clamps, without legs ..... 10.00

### COLT'S CABINET CLAMP

Eccentric or Screw

Fig. 96

Formerly listed as Colt's cabinetmakers' and builders' steel bar clamp.

The Cabinet clamp is made of 1 1/2 inch I bar steel with 2 inch reach, with the sliding foot and eccentric lever. This clamp can be applied to work quicker than any other clamp made and is our most popular style. The sliding foot with its improved locking device will grip the bar at any point without the necessity of notches which weaken the bar or springs to get out of order.

The extra heavy Clamp is made of 1 3/4 inch steel bar with 2 inch reach.

One-half heavier than the Cabinet style and suitable for heavy work.

Eccentric or screw as desired. If not specified we always send the eccentric.

Price per doz. Either Style

	Cabinet	Extra Heavy		Cabinet	Extra Heavy
10 inch....	\$10.00	.....	48 inch....	\$21.00	\$32.16
12 inch....	10.80	15.60	60 inch....	25.20	37.68
18 inch....	12.60	18.36	72 inch....	28.80	43.20
24 inch....	14.40	21.12	84 inch....	32.40	48.72
30 inch....	16.20	23.88	96 inch....	36.00	54.24
36 inch....	18.00	26.64			

We can furnish the Cabinet Clamp with 4 inch reach from bar to center of button, eccentric and also screw, up to 24 inch length for light work. If longer than 24 inches it should be made with screw for very light work and we do not recommend this clamp over 24 inch length.

1 1/2 Inch I Bar—Price per doz.

10 inch....	\$10.00	18 inch....	\$13.20

2	3 1/2 x 3/4	36	17.75
3	4 x 1	36	20.00

### HAND SCREWS

Fig. 800

Jaws made of well-seasoned hard maple, sanded and oiled. Spindles made of selected hickory stock, air seasoned, and under test show extraordinary twisting resistance. They are tumbled and waxed. Instead of lessening the natural strength of the wood it is retained uninjured in the threads by making them saw-cut with a special machine and the wood is not weakened by having a V shaped tool forced through it, tearing and bruising the grain. The threads on the spindles are 25% stronger and more lasting than those of any other wood hand screw.

## STEEL BAR CARPENTERS' CLAMP

Fig. C 4 A

The bar is rolled from a special quality of stiff steel; the "T" shape has much more strength for a given weight than is possessed by flat stock. The notches are cut on the lower edge of the bar, affording greater holding power to the sliding jaw than if they were on the upper edge.

The steel screw is provided with a deep and powerful thread; the crank, sliding jaws and pawl are malleable, and the handle of wood, ebonized. The sizes given below represent a maximum width of work which each size will take.

No.	Size of Beam inches	Diameter of Screw inches	Width of Work up to feet	Price per pair	No.	Size of Beam inches	Diameter of Screw inches	Width of Work up to feet	Price per pair
C 1 A	$1\frac{1}{8} \times 1\frac{1}{2}$	$\frac{5}{8}$	1	\$3.80	C 5 A	$1\frac{1}{8} \times 1\frac{1}{2}$	$\frac{5}{8}$	5	\$ 7.00
C 2 A	$1\frac{1}{8} \times 1\frac{1}{2}$	$\frac{5}{8}$	2	4.20	C 6 A	$\frac{1}{4} \times 1\frac{3}{4}$	$\frac{3}{4}$	6	11.90
C 3 A	$1\frac{1}{8} \times 1\frac{1}{2}$	$\frac{5}{8}$	3	5.60	C 7 A	$\frac{1}{4} \times 1\frac{3}{4}$	$\frac{3}{4}$	7	13.30
C 4 A	$1\frac{1}{8} \times 1\frac{1}{2}$	$\frac{5}{8}$	4	6.30	C 8 A	$\frac{1}{4} \times 1\frac{3}{4}$	$\frac{3}{4}$	8	15.40

## WOOD BAR CARPENTERS' CLAMP

Fig. C 10 A

This Clamp is suitable for all purposes in which woodwork is required to be firmly held in a powerful Clamp. The bottom of the wood bar is perfectly smooth, the Clamps may be set flat on the bench and the work put in them from the upper side. The movable jaw may be engaged in the different holes to accommodate different sizes of work.

The bar is made of thoroughly seasoned and carefully selected hard wood, oil finished,  $1\frac{3}{4} \times 2\frac{3}{4}$  inch iron, carefully japanned. Steel screw and malleable fittings.

No.	Length feet	Price each	No.	Length feet	Price each
C 9 A	4	\$3.00	C 11 A	6	\$3.70
C 10 A	5	3.50	C 12 A	8	4.00

## CLAMP IRONS

Fig. C 13 A

## A Very Strong and Durable Set of Clamp Irons

Wood bar is illustrated for purpose of showing how irons are attached. The irons only are furnished. The screw is made of cold rolled steel with a deep, square-cut thread, and heavy swivel washer on the end next to the work. Finished with a heavy crank and handle. May be quickly and easily attached to any  $1\frac{3}{8} \times 2\frac{1}{2}$  inch wood bar of any length.

C 13 A. 1 dozen sets in case.....per set \$1.00

FOR OTHER STYLES OF CLAMPS AND VISES, SEE INDEX

## RULES

The rules listed below are of superior grade, due to the quality and seasoning of the wood, the weight of the metal used in the joints and trimmings, the nicety of graduation, and the care given to the finish. As will be noted in the various tables following, they are made in a wide range of numbers varying in length, width, forms of joints and plates, style of trim, and graduations. All joints, plates, bindings, etc., in these rules are made of brass, which prevents rusting.

### TWO FOOT BOXWOOD RULES, UNBOUND

Fig. 62

#### FOUR FOLD, 1 INCH WIDE

- No. 68. Round joint, middle plates, 8ths and 16ths drafting scale.....per doz. \$2.50  
 No. 61. Square joint, middle plates, 8th and 16ths drafting scales.....per doz. 3.00  
 No. 63. Square joint, edge plates, 8ths, 10ths, 12ths and 16ths drafting scales.....per doz. 4.00

#### FOUR FOLD, 1 1/2 INCHES WIDE

- No. 72. Square joint, edge plates, 8ths, 10ths and 16ths drafting scales.....per doz. \$5.00  
 Packed 1/2 dozen in box. Weight per dozen, approximately 2 lbs.

### TWO FOOT BOXWOOD RULES, BOUND

#### FOUR FOLD, 1 INCH WIDE

- No. 84. Square joint, half bound, 8ths, 10ths, 12ths and 16ths drafting scales....per doz. \$6.50  
 No. 62. Square joint, full bound, 8ths, 10ths, 12ths and 16ths drafting scales....per doz. 8.00

### THREE FEET, FOUR FOLD, 1 INCH WIDE, UNBOUND.

- No. 66 1/2. Arch joint, middle plates, 8ths and 16ths drafting scale.....per doz. \$6.00  
 Packed 1/2 dozen in box. Weight per dozen, approximately 2 1/4 lbs.

### SPECIAL BOXWOOD RULES

Fig. 53 1/2

#### ARCHITECTS' FOUR FOLD, 1 INCH WIDE

The inside edges of these rules are beveled and divided into Drafting Scales, 1/4, 1/8, 3/16 and 1/2 inch to the foot. The beveling brings the edges close to the surface being scaled, which is a great convenience in laying out work or when used with a pencil. Drafting scales are used for laying out work or reading drawings where a scale of 1/4 and 1/2 inch, etc., to the foot is found convenient.

- No. 53 1/2. Arch joint, edge plates, 8ths, 10ths, 12ths and 16ths drafting scales....per doz. \$8.00  
 Packed 1/2 dozen in box. Weight per dozen, 1 1/2 lbs.

Fig. 806

### RIVET JOINT ZIGZAG RULES

Foot	Weight per dozen lbs.	No.	Yellow Enamel Finish, Per doz.	No.	White Enamel Finish, Per doz.
2	3/8	802	\$1.80	852	\$2.04
3	1 3/8	803	2.70	853	3.00
4	1 3/8	804	3.60	854	3.96
5	2 1/8	805	4.50	855	4.92
6	2 7/8	806	5.40	856	6.00
8	4	808	7.20	858	7.92

Packed 1 dozen in box.

FOR LEVELS, PLUMBS, AND TAPE LINES, SEE INDEX

### MASTER SLIDE RULE

Fig. 5695

Especially adapted for measuring inside points not accessible for regular rules.  
 Length, 6 feet.....per doz. \$15.00

### BOXWOOD CALIPER RULES

All Caliper Rules are regularly made with caliper left hand, as shown in illustration. They can be furnished with caliper right hand—that is, with the caliper slide in the other leg of the rule, the caliper head or end piece being turned the other way—for 25c extra per dozen. Caliper slides are regularly graduated in 16ths, but can be furnished in 32nds without additional charge, if so ordered (except No. 83C which is regularly graduated in 32nds).

Fig. 32 1/2

#### SIX INCH, TWO FOLD

- No. 36. Square joint, 3/4 inch wide, 8ths, 10ths, 12ths and 16ths.....per doz. \$4.50  
 Packed 1/2 dozen in box. Weight per dozen, approximately 1 lb.

#### ONE FOOT, TWO FOLD

- No. 36 1/2. Square joint, 1 1/4 inches wide, 8ths, 10ths, 12ths and 16ths.....per doz. \$6.50  
 Packed 1/2 dozen in box. Weight per dozen 1 1/2 lbs.

#### ONE FOOT, FOUR FOLD

- No. 32. Arch joint, edge plates, 1 inch wide, 8ths, 10ths, 12ths and 16ths.....per doz. \$ 7.00  
 No. 32 1/2. Arch joint, full bound, 1 inch wide, 8ths, 10ths, 12ths and 16ths.....per doz. 10.00  
 Packed 1/2 dozen in box. Weight per dozen approximately 1 1/4 lbs.

#### TWO FOOT, FOUR FOLD

- No. 83C. Arch joint, edge plates, 1 1/4 inches wide, 8ths, 10ths and 16ths.....per doz. \$12.00  
 Packed 1/2 dozen in box. Weight per dozen, approximately 3 lbs.

### RAYBONE COMBINATION BOXWOOD

Fig. 5694

- No. 1190. Two foot, four fold, with split level and degrees on joint.....per doz. \$15.00

## RULES AND BEVELS

## GLASS CUTTERS' RULES

With Brass Flange or Lip

Fig. 7143

Graduated Both Sides and Both Edges in Consecutive  
Inches and 8ths  
POLISHED MAPLE

No.	Length Inches	Size Inches	Weight per dozen lbs.	Per dozen
7141	36	1 3/4 x 1/4	7	\$29.40
7142	48	1 3/4 x 1/4	9	41.40
7143	60	2 1/4 x 1/4	15	53.40
7144	72	2 1/2 x 1/4	17	64.80
7145	84	3 x 1/4	22	82.80
7146	96	3 x 1/4	27	100.80
7147	108	3 1/2 x 1/4	34	118.20
7148	120	3 1/2 x 1/4	37	136.20
7149	144	3 1/2 x 3/8	65	204.00

Fig. 1. Board Rule

No. 1. Three tier, 3 1/2 foot inspector's Board Rule ..... per dozen \$27.00  
This Rule is made of the very best second growth white hickory. The head is brazed (steel caps and brass shoulders).

No. 2. Three tier, 3 foot Board Rule. per dozen \$25.00  
This Rule is the same as No. 1, except in length. It is the rule for regular yard work.

Fig. 14. Log Rule

No. 14. Square Head Log Rule figured to 48 inches, with 8 inch handle, any scale desired ..... per dozen \$27.00

No. 15. Square Head Log Rule, figured to 36 inches, with 6 inch handle, any scale desired ..... per dozen 23.00

Fig. 6. Diamond Head Log Rule

This patent Diamond Head is especially recommended on account of the head being able to withstand more strain than regular head. We carry in stock the Diamond Head in Nos. 2 and 6, 3 foot, in lengths of 8, 10, 13 one side, 12, 14, 16, reverse side.

Made to order in any size.  
Extra price, add to list. .... per dozen \$2.00

## EXTENSION RULES

Fig. 240

These Rules are very useful for accurately measuring the distance between two fixed points. When extended to required length, the sections may be secured by the set screw. To read this rule, add to the number of feet indicated by large figure, nearest left end of rule, the inches and fractions of inches exposed from under left hand end of the upper section.

No. 240. 2-4 feet long, 1 inch wide. Maple  
Brass trim. 8ths of inches. .... per dozen \$ 8.00  
No. 360. 2-6 feet long, 1 inch wide. Maple.  
Brass trim. 8ths of inches. .... per dozen 9.00  
No. 480. 4-8 feet long, 1 inch wide. Maple.  
Brass trim. 8ths of inches. .... per dozen 10.00  
No. 510. 5-10 feet long, 1 inch wide. Maple  
Brass trim. 8ths of inches. .... per dozen 12.00  
No. 612. 6-12 feet long, 1 inch wide. Maple.  
Brass trim. 8ths of inches. .... per dozen 15.00  
Weight per dozen, approximately 12 lbs.

## SHIP CARPENTERS' BEVELS

Fig. 42

No. 42. Boxwood, double tongue. Divided 8ths and 16ths. Packed 1 dozen in box. Weight per dozen, 1 1/2 lbs. .... per dozen \$4.00

## BLACKSMITHS' RULES

Fig. 17

This Rule consists of two legs made from spring brass, joined together by a brass joint containing a stiff spring which holds the rule rigid when open. Particularly adapted for measuring hot metal, as it can be cooled by plunging in water without rusting.

No. 17. 2 foot, 2 fold. 3/4 inch wide. Graduated in 8ths and 16ths of inches. per dozen \$6.00  
Packed 1/2 Dozen in Box. Weight Per Dozen, 2 1/2 lbs.

## BLACKSMITHS' HOOK AND HANDLE RULE

Fig. 1063

No. 1063. Made from hard brass, 1 1/2 inch thick, 1 1/2 inches wide. Graduations and figures heavy and distinct. Marked on both sides, lower edge, inches and 16ths; one side measures from inside of hook, other side from end of rule. Graduated 12 inches, have flat handles and measure 16 1/2 inches over all. Weight 8 oz. each.  
Price, each. .... \$1.25

FOR GLASS, GLAZIERS' POINTS AND PUTTY, SEE INDEX

## "CHALLENGE" STEEL MEASURING TAPES

Instantaneous Readings

Metal lined hard leather cases, nickel plated trimmings, folding flush handle, opened by pressing pin on opposite side. Measurements guaranteed accurate.

## FIG. 273 ENGINEER'S PATTERN FRAME STEEL TAPES

Metal frames and trimmings, polished hardwood handles, two detachable rings. The tape can be readily detached from frame, and when so detached, the frame can be conveniently carried in pocket.

Tapes less than 100 feet long are put up on two arm frames; tapes 100 feet and longer are put up on four arm frames.

## TAPE HOOKS

Fig. 551

For attaching to steel tapes. Measures from inside of hook.

No. 551. For 1/4 inch tapes.....each \$0.60

No. 552. For 3/8 inch tapes..... " .60

## CLAMP HANDLES

Fig. 584

For attaching to any part of a steel tape, enabling one to adapt it to any desired length. Brass, nicely nickel plated.

No. 584. Weight, 4 oz.....each \$1.00

## REGULAR SCREW DRIVERS

Fig. 20

These Screwdrivers are unsurpassed for strength and durability.

The blade, shank and head are one piece of special steel. Two patented projecting wings under the head, together with a rivet which passes through the ferrule, handle and shank, securely fastens the blade in the handle, preventing its turning (see cut).

They are made in two forms: One, in which the metal handle comes clear through the handle, and one, designed for electricians, giving the same advantages of strength, but having the head countersunk in the handle and insulated by a non-conducting plug. All have finely tempered blades, and are well finished. The handles are fluted and stained black.

Length Blade, ins.	Diameter inches	Tip inches	Size Over All, inches	Package Quantity dozen	Weight lbs.	Per dozen
2 1/2	7/32	5/32	6 1/2	1 1/2	3/4	\$2.40

30	1/2	9/16	39 1/2	1 1/2	16 1/2	19.20

## CABINET MAKERS' SCREW DRIVERS

Fig. 40

In this form of Driver, the sides of the tip are parallel instead of being tapered, the width of the tip being the same as the diameter of the shank. This permits of a countersunk screw being followed up without marring or damaging the work. Same construction as Fig. 20.

Length Blade, ins.	Diameter inches	Tip inches	Size Over All, inches	Package Quantity dozen	Weight lbs.	Per dozen
2 1/2	7/32	7/32	6 1/2	1 1/2	3/4	\$2.40

30 1/2	1/4	1/4	35 1/2	1 1/2	5 1/2	19.20

## "LEADER" SCREW DRIVERS

Have blades made of a fine quality of round steel, with the ends, which are engaged in the handles, squared, thus securely fastening them. The tips take the standard form throughout and neat, substantial ferrules are used. Handles stained red.

Fig. 50

Length Blade inches	Size Over All inches	Package Quantity dozen	Weight lbs.	Per dozen

## SMALL SHANK SCREW DRIVERS

This line of Screwdrivers is designed for light and delicate work. The blades are made of very small stock and the tapered tips of a proportionate size. The handles are short and of small diameter so that they just fit the palm of the hand, permitting the owner to use his thumb and forefinger against the shoulder (near the ferrule) when turning screws requiring delicate adjustment.

The No. 55 is particularly adapted for light electrical work, as the tip fits the countersink in the porcelain fittings.

Fig. 50

Fig. 55

Where width of tip is given, it is approximately correct.

## MACHINISTS' SCREW DRIVERS

Fig. 53 1/2

Fig. 51

Fig. 21

Fig. 51 1/2

Our Machinists' Screw Drivers are especially adapted for heavy work where a long driver cannot be conveniently used. Nos. 51 1/2, 52 1/2, 53 1/2 and 54 are made with a hexagonal shank for use with a wrench. No. 54 has a long double grip handle. The handles are fluted and stained black.

No. 51. 1 1/2 inch blade, 3/4 inch diameter, 9/32 inch tip, 5 1/4 inches over all; 1/2 dozen in 1 1/4 lb. package.....	per dozen	\$4.20
No. 52. 3 inch blade, 7/16 inch diameter, 15/32 inch tip, 7 1/4 inches over all; 1/2 dozen in 2 1/4 lb. package.....	per dozen	6.60
No. 53. 4 inch blade, 1/2 inch diameter, 1/2 inch tip, 9 1/4 inches over all; 1/2 dozen in 4 1/4 lb. package.....	per dozen	8.40
No. 54 1/2. 1 1/2 inch blade, 3/4 inch diameter, 9/32 inch tip, 5 1/4 inches over all; 1/2 dozen in 2 lb. package.....	per dozen	7.20
No. 52 1/2. 2 1/2 inch blade, 7/16 inch diameter, 15/32 inch tip, 7 1/4 inches over all; 1/2 dozen in 3 lb. package.....	per dozen	8.40
No. 53 1/2. 3 1/2 inch blade, 1/2 inch diameter, 1/2 inch tip, 9 3/4 inches over all; 1/2 dozen in 4 1/4 lb. package.....	per dozen	10.20
No. 54 1/2. 10 inch blade, 1/2 inch diameter, 1/2 inch tip, 18 inches over all; 1/2 dozen in 8 1/2 lb. package.....	per dozen	18.00

Our "Baby" Screwdriver No. 21 is a handy little tool for the vest pocket, only four inches long over all and will work a good sized screw. Same design as the regular screwdrivers, thus insuring strength. The handle is fluted and stained black.

No. 21. 1 1/4 inch blade, 7/32 inch diameter, 5/32 inch tip, 4 inches over all; weight, 1/2 dozen, 1/2 lb. ....per dozen \$2.40

Packed 1/2 Dozen in Box

### TOOL SETS

Fig. 100

In response to frequent demands for screw drivers put up in substantial and well finished boxes, to be used by mechanics who desire to keep tools in fine order, and by gentlemen or amateur mechanics who especially appreciate tools put up in handsome sets, we offer the set as illustrated above. The box, which is very substantially made of oak, handsomely finished, contains one each of the following tools:

No. 30 Spiral Ratchet Screw Driver.  
Chuck, with drill points, eight sizes,  $\frac{1}{16}$ ,  $\frac{1}{8}$ ,  $\frac{3}{16}$ ,  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$ ,  $\frac{7}{8}$  inches, to use for drilling holes with the No. 30 spiral ratchet screw driver.

No. 11 Ratchet Screw Driver, with blade 6 inches long.  
No. 15 Ratchet Screw Driver, with finger turn on blade, with blade 3 inches long.

These are the styles and sizes of tools most in demand, and the combination in a set covers all the usual requirements in tools for driving and drawing out screws. The tools are easily removed from box, and when it is closed are held firmly in place.

The box measures 12  $\frac{1}{2}$  x 4  $\frac{1}{2}$  x 2  $\frac{1}{2}$  inches. Weight, 3  $\frac{1}{4}$  lbs. List price..... per set \$4.85

### RECIPROCATING DRILL

Fig. 50

Designed for use in drilling in steel, iron, brass and other metals, as well as all varieties of woods. It is so constructed that the drill runs continuously to the right, during both the forward and backward movement of the driver, hence drills continuously. The pressure to feed the drill is had by the pressure against the head of the tool, which is provided with ball bearing to reduce the friction. While lighter in weight, and therefore more convenient in use, it is in all essential points stronger than other apparently similar tools. The chuck is of new design, has three jaws, is accurate, stronger and more durable than similar chucks, and will not get out of order.

No drill points are furnished with this tool—the user furnishing such quality, style and size best suited for work required in wood, iron, steel, brass, etc. The chuck will hold any drill with straight shank  $\frac{1}{8}$  inch diameter or less. To open or close chuck move the driver up to chuck, push down the catch in lower end of driver, which holds fast the driver on spindle. After drill is put in chuck and tightened, push up the catch, releasing driver from spindle so it can be moved backward and forward to operate drill.

The movement or traverse of the driver is  $\frac{3}{8}$  inches. The entire length of tool without drill is 16 inches. Packed one in strong paper box. Weight per dozen, in paper box, 15 lbs.

Price each ..... \$2.75

### RATCHET SCREWDRIVER

With Screw Holder Attachment Right and Left Hand, and Rigid

Fig. 110

Fig. 110. Ratchet Screw Driver with screw holder attachment. Packed one-half dozen in box

## NAIL SETS, PUNCHES, AWLS, REELS, ETC.

### ICE PICKS

The blade, shank and head are formed of one piece of steel. Two patented projecting wings under the head, together with a rivet which passes through the ferrule, handle and shank, securely fastens the blade in the handle. The needle points being carefully tempered, no chipping is necessary, simply push the point through the ice. Handles stained black. No. D, Ice Pick, has an iron band around the handle which will be found convenient for breaking the ice into small pieces. Its hexagonal form prevents the pick from rolling when laid down.

No. A, Ice Pick, 5½ inch blade, 7/32-inch diameter, needle point; ½ dozen in 1½ lb. package. Per dozen	
No. B, Ice Pick, 5½ inch blade, 7/32-inch diameter, needle point; ½ dozen in 1½ lb. package. Per dozen	\$3.48
No. C, Ice Pick, 5½ inch blade, 5/32-inch diameter, needle point; ½ dozen in 1 lb. package. Per dozen	3.48
No. D, Ice Pick, 5½ inch blade, 7/32-inch diameter, needle point; ½ dozen in 2 lb. package. Per dozen	3.12
	4.56

### MAGNETIZED TACK HAMMERS

Fig. 2

The heads, with the exception of No. 4, are magnetized, which enables the user to easily locate and pick up the smallest of tacks. The head, handle and claw of No. 4 is one piece of malleable iron. The sides of the handle are inlaid with two wooden strips securely riveted in place, and all metal parts are plated.

No. 1, 10 inch, hardwood handle, 3¼-inch head, 1 dozen in 3½ lb. package..... per doz.	\$1.25
No. 2, 11½ inch, hardwood handle, 4-inch head, 1 dozen in 1¼ lb. package..... per doz.	1.50
No. 3, 11½ inch, hardwood handle, 4¾-inch head, 1 dozen in 5 lb. package..... per doz.	1.75
No. 12, 10 inch, iron handle, 3¾-inch head, 1 dozen in 5½ lb. package..... per doz.	1.25
No. 4, 10¾ inch, inlaid handle, 4-inch head, 1 dozen in 5¼ lb. package..... per dozen	2.50

### CHALK LINE REELS

Made of hardwood and polished. With Nos. 13 and 15 are furnished 60 feet of strong, white cord, and with Nos. 14 and 15, a Stanley No. 1 Scratch Awl.

No. 11, 4 inches long, 2¼-inch diameter, 1 dozen in 2 lb. package..... per gross	\$10.80
No. 12, 3 inches long, 2-inch diameter, 3 dozen in 2½ lb. package..... per gross	4.30
No. 13, 3 inches long, 2-inch diameter, 60 ft. line, 1 dozen in 1½ lb. package..... per gross	21.00
No. 14, 3 inches long, 2-inch diameter, scratch awl, 1 dozen in 2½ lb. package..... per gross	11.40
No. 15, 3 inches long, 2-inch diameter, 60 ft. line and scratch awl, 1 dozen in 3½ lb. package..... per gross	27.00

Fig. 15

FOR HAMMERS, REELS, AND TACKS, SEE INDEX

### AWL HAFTS AND HANDLES

Fig. 6½

Fig. 6

No. 6, Peg Awl Haft, leather top, steel chuck, 1 dozen in 2 lb. package..... per gross	\$12.00
No. 6½, Sewing Haft, plain top, steel chuck, 1 dozen in 2 lb. package..... per gross	12.00

### AWLS

These awls have blade, shank and head formed of one piece of steel. Two patented projecting wings under the head, together with a rivet which passes through the ferrule, handle and shank, securely fastens the blade in the handle. The handles are stained black. All points are carefully tempered.

Fig. 17

Fig. 4

Fig. 7

No. 17, Brad Awl, 1¼-inch to 1½-inch assorted, flat point, 1 dozen in 1½ lb. package..... per doz.	\$3.00
No. 6, Scratch Awl, 2½-inch blade, ¼-inch diameter, needle point, ½ dozen in ¾ lb. package..... per dozen	3.06
No. 7, Scratch Awl, 3¼-inch blade, ¼-inch diameter, needle point, ½ dozen in 1½ lb. package..... per doz.	3.21

### NAIL SETS AND CENTER PUNCHES

Fig. 11

Fig. 10

These are made of the finest grade of special tool steel obtainable that can be used in making tools of this class. They are hardened at both ends and blued. The tips or points are carefully oil tempered and will stand the most severe test under all conditions.

The head is so shaped that there is little possibility of hammer slipping from the tool.

These tools are packed in boxes, assorted sizes, or can be purchased singly.

In ordering, give number and size of tip desired.

These Nail Sets have tips that are cupped and the edges are nicely rounded. The three smaller sizes have the same diameter shank—a heavier shank is used in the larger size.

No. 11, Nail Sets, 4 inches long, 2/32 inch tips, 12 only in ¾ lb. package..... per doz.	\$1.40
No. 11, Nail Sets, 4 inches long, 5/64-inch tips, 12 only in ¾ lb. package..... per doz.	1.40
No. 11, Nail Sets, 4 inches long, 3/32-inch tips, 12 only in ¾ lb. package..... per doz.	1.40
No. 11, Nail Sets, 4 inches long, 4/32 inch tips, 12 only in ¾ lb. package..... per doz.	1.40

Also regularly packed in attractive display boxes, assorted as follows:

No. 11A, Assorted sizes, 5/2/32, 3/5/64, 4/3/32-inch tips, 12 only in ¾ lb. package..... per box	\$1.40
No. 11B, Assorted sizes, 8/2/32, 6/5/64, 7/3/32, 3/4/32-inch tips, 24 only in 1½ lb. package..... per box	2.80
No. 11C, Assorted sizes, 10/2/32, 8/5/64, 11/3/32, 7/4/32-inch tips, 36 only in 2½ lb. package..... per box	4.20

These Center Punches have tips accurately shaped so that the extreme point is always in the center of the tool. The two smaller sizes have the same diameter shank; a heavier shank is used in the larger size.

No. 10, Center Punches, 4 inches long, 5/64-inch tips, 12 only in ¾ lb. package..... per doz.	\$1.40
No. 10, Center Punches, 4 inches long, ¼-inch tips, 12 only in ¾ lb. package..... per doz.	1.40
No. 10, Center Punches, 4 inches long, 5/32-inch tips, 12 only in ¾ lb. package..... per doz.	1.40

Also regularly packed in attractive display boxes, assorted as follows:

No. 10A, Assorted sizes, 4/5/64, 4/4, 4/5/32-inch tips, 12 only in ¾ lb. package..... per box	1.40
No. 10B, Assorted sizes, 8/5/64, 8/4, 8/5/32-inch tips, 24 only in 1½ lb. package..... per box	2.80
No. 10C, Assorted sizes, 12/5/64, 12/4, 12/5/32-inch tips, 36 only in 2½ lb. package..... per box	4.20

## UTICA BOX JOINT SIDE CUTTING PLIER

Fig. 2050.

No. 2050. Designed to give great leverage as well as the proper "hang" in the workman's hand. Utica Finish.

Size, inches.....	5	6	7	8
Price, per doz.....	\$12.20	13.60	16.00	19.00

## UTICA STANDARD SIDE CUTTING PLIER

Fig. 50

No. 50. Is the ideal tool for electrical construction work. It is lighter in weight than the ordinary Side Cutting Plier but so skillfully tempered that the handles will not bend or set when great pressure is exerted on them. Utica Finish.

Size, inches.....	4	5	6	7	8
Price, per doz.....	\$8.40	9.00	9.80	11.80	13.30

## UTICA LONG CHAIN NOSE SIDE CUTTING PLIER

Fig. 654

No. 654. Forged from a fine quality of steel. The nose is spring-tempered. It is an ideal tool for use by Telephone Manufacturers, Machinists, Jewelers, Opticians, Electricians, etc.. The nose is not quite so sharp as No. 655. Utica Finish.

Price, per doz..... \$8.50 7.00 8.60 10.00 12.00

PLIERS, SEE INDEX

## PLIERS AND NIPPERS

## UTICA BOX JOINT SLIP JOINT PLIER

Fig. 6006

No. 6006. This tool has many advantages over the ordinary Slip Joint Plier. The jaws are so constructed that they will adjust themselves to any taper, half-round, round, three-square, or parallel. The flat side always lays itself to the lower jaw, which is straight. This construction gives great gripping power and strength. It will do all the work of a parallel Plier and many things such a Plier will not do. It also makes a good Side Cutting Plier. It has the checkered handles. Utica finish.

Size, inches	6	8
Wt. per doz., lbs.	6 1/2	8
Price, per doz.	\$9.00	12.00

## UTICA CURVED NEEDLE NOSE PLIER

Fig. 888

No. 888. The long, curved, spring-tempered nose enables one to use the Plier in deep or narrow places without turning or twisting the hand, as in assembling jigs, fixtures, electrical apparatus, typewriters, etc. Utica finish.

Size, inches	5 1/2	6 1/2
Wt. per doz., lbs.	2 1/2	3 1/2
Price, per doz.	\$12.90	15.60

## UTICA ROUND END COMBINATION BURNER PLIER

Fig. 325

No. 325. This Burner Plier is used by Plumbers, Electricians and Machinists, and makes a good all-round tool. The teeth in the burner grip are milled, the cutting edges are keen. Utica finish.

Size, inches	5	5 1/2
Wt. per doz., lbs.	3 3/4	3 3/4
Price, per doz.	\$8.60	9.30

## UTICA ROUND NOSE PLIER

Fig. 21

No. 21. This short, round Nose Plier is forged from a fine quality of steel, carefully tempered. It is used by Jewelers, Watchmakers, Opticians and in various other kinds of work where a light high quality round Nose Plier, that rests in the hand with the proper "hang," is required.

## UTICA UNIVERSAL PLIER

Fig. 700

No. 700. The Universal Plier in the fullest sense of the word. It has a Wire Cutter on each side of the Joint that will cut—not mash—the wire. It also has a Side Cutter for cutting large or insulated wire. The Burner Grip has milled teeth that will grip and hold firmly with very little pressure on the handles. Utica finish.

Size, inches	7	8 1/2
Wt. per doz., lbs.	7	8 1/2
Price, per doz.	\$12.40	

## UTICA GAS AND BURNER PLIER

Fig. 1300

No. 1300. This Plier was designed to meet the ever increasing demand for a Quality Gas and Burner Plier. It has a larger capacity than the ordinary Gas and Burner Plier. The handles are so shaped that in grasping a large pipe a firm grip may be had with very little pressure on the handles. Utica finish.

## PAPER BALERS

SELL YOUR WASTE PAPER AT TOP MARKET PRICES

With waste paper worth \$13.50 to \$48.00 a ton—you cannot afford to waste a single pound. Paper mills everywhere are begging for raw materials—the U. S. Department of Commerce has issued a circular urging everyone to save old papers and rags.

## Economy Baling Presses Successfully Bale—

Paper, rags, wool, waste, cotton, bags, burlap, rugs, blankets, dry goods, clothing, findings, leather, tobacco stems, hides, furs, hay, straw, hair, excelsior, moss, wood pulp, broom corn, manure, hemp, hops, fodder, flax, shavings, fluffy steel turnings, wire, metal scrap, tin cans, etc.

We can furnish special balers to meet practically any purpose and condition, to be operated by hand, belt drive or directly connected motor.

Equipped with special fire tight baling case and automatic closing hopper.

A strictly fire-proof waste vault that not only reduces your fire risks, but helps keep your floors, offices and basements neater and cleaner, and pays a handsome dividend on your investment, on the sale of waste paper.

Fig. 1901

## GENUINE KLEIN'S EASTERN CLIMBERS

No.	Avg. Wt. Per pair	Price per doz.
1901	3½ lbs.	\$32.00

Lengths from 15 to 18 inches, from the instep to the end of shank, by ½ inch variations. No. 1901 style has punched strap loops.

Polished and nickel plated, extra per pair, net \$1.00.

Polished and nickel plated on copper, extra per pair, net \$1.25.

## TOOL BELT

Fig. 5205

No.	Size	Weight per doz.	Price per doz.
5205.	2½ inch.....	24 lbs.	\$26.00

Made of select harness leather. The inner layer carries the "D" rings and is lock stitched and riveted to the outer layer which also passes through the "D" rings and is provided with a strong buckle. The outer loop layer is 1½ inch wide and has 6 loops. This arrangement makes a doubly safe belt.

## KLEIN'S COMBINATION STEEL LAG SCREW WRENCHES

Fig. 3109-20

No.	Size	Weight per doz.	Price per doz.
3109-20.	13½ inch.....	50 lbs.	\$24.00

These wrenches are forged from select bar steel. The slot is formed in a cross shape, and will fit machine bolts, nuts or lag screws from ¾ inch to 1 inch. The small end of the wrench is arranged for ¾ inch machine bolts or lag screws. The round hole allows the end of a bolt to come through as the nut is run on.

The jaw is wider at its upper portion and when this wrench is put on a nut or bolt the tendency is to draw the bolt-head or nut into the wrench and prevent slipping off. The extra work in attaining the inward taper is what makes the No. 3109-20 wrench cost more than the 3110-20.

FOR OTHER STYLES OF PLIERS,

## KLEIN STRAPS FOR EASTERN CLIMBERS

Fig. 5301-1

No.	Weight per doz. sets	Price per doz. sets
5301-1	15 lbs.	\$16.00

The set consists of two upper straps with 4x4 plain leather pads and two lower straps as shown in cut, made of select oak tanned harness leather, extra heavy roller buckles. Heel straps (over all), 22 inches long by 1½ inches wide; calf strap (over all), 22 inches long by 1½ inches wide.

No.	Weight per doz. sets	Price per doz. sets
5301-2.	Same as above, with sheep lined pads....	16 lbs. \$19.00
5301-3.	Same as above, with felt lined pads.....	16 lbs. 19.00

## KLEIN SAFETY STRAPS

Fig. 5250

No.	Size	Weight per doz.	Price per doz.
5250.	1½ in. by 6 ft. with Imperial snaps .....	30 lbs.	\$23.20

Fig. 5251

No.	Size	Weight per doz.	Price per doz.
5251.	1½ in. by 6½ ft. with roller snaps .....	30 lbs.	\$25.60
5253.	2 in. by 6 ft. with roller snaps .....	33 lbs.	30.00

## KLEIN STEEL LAG SCREW WRENCHES

Fig. 3110-20

No.	Size	Weight per doz.	Price per doz.
3110-20.	1½ inch.....	20 lbs.	\$20.00

Forged from select bar steel. The jaw is made tapering, allowing it to take any ordinary size machine bolts, nuts, or lag screws from ¾ inch to 1 inch. The hook is a means of attaching the wrench to the tool belt and it serves to keep the heads of bolts within the jaws of the wrench when in use.

WRENCHES, ETC., SEE INDEX

## GENUINE KLEIN ELECTRICAL CONSTRUCTION TOOLS

## SPlicing CLAMPS

All Splicing Clamps Packed One in Carton  
Polished Heads and Black Handles.

Fig. 102-1

No.	Size	Weight per doz.	Price per doz.
102-1.	7 inch.....	4½ lbs.	\$20.00

Holds Nos. 10, 12, 14 and 16 Copper wire or Nos. 12, 14, 16 and 18 Iron wire.

A handy vest pocket size, just the thing for Telephone Trouble-Men.

Fig. 102-3

No.	Size	Weight per doz.	Price per doz.
102-3.	10½ inch.....	14½ lbs.	\$27.25

Holds Nos. 6, 8, 10, 12 and 14 Iron wire, or Nos. 4, 6, 8, 10 and 12 Copper wire.

This type is generally used in Telephone Line work and covers the range of bare wires a lineman will meet in this work. The large hole can also be used in serving guy wire.

Fig. 102-2

No.	Size	Weight per doz.	Price per doz.
102-2.	10½ inch.....	14½ lbs.	\$25.50

For Nos. 4, 6, 8 and 14 Iron wire, or Nos. 2, 4, 6 and 12 Copper wire.

This type is used in Electric Light wiring in which the wires run to considerable diameter, the holding dies are oval shape and the wires lay side by side.

Fig. 105-6

No.	Size	Weight per doz.	Price per doz.
105-6.	10½ inch.....	14 lbs.	\$25.50

For Sleeve Nos. 8, 10, 12 and 14 B. & S. Gauge.

No.	Size	Weight per doz.	Price per doz.
105-7.	10½ inch.....	14 lbs.	\$25.50

Same style as 105-6 only, fitted for Sleeves Nos. 6, 8, 10 and 12 B. & S. Gauge.

The dies in these clamps fit the sleeves snugly so the sleeve is not injured in twisting.

## COMBINATION WIRE AND SLEEVE CLAMPS

Fig. 132-2

No.	Size	Weight per doz.	Price per doz.
132-2.	9 inch.....	10½ lbs.	\$28.50

Holds Nos. 8, 10, 12 and 14 Iron wire, or Nos. 6, 8, 10 and 12 Copper wire, Nos. 10, 12 and 14 Sleeves B. & S. Gauge.

As shown the clamp is set for holding sleeves. When the handles are reversed it is converted into a four round hole clamp for holding wire.

Fig. 132-3

No.	Size	Weight per doz.	Price per doz.
132-3.	10½ inch.....	15½ lbs.	\$29.00

Has five holes for Nos. 6, 8, 10, 12 and 14 Iron wire, Nos. 4, 6, 8, 10 and 12 Copper wire, and 8, 10, 12 and 14 Sleeves, B. & S. Gauge.

No.	Size	Weight per doz.	Price per doz.
132-4.	10½ inch.....	15½ lbs.	\$29.00

Same as 132-3 only, fitted for Nos. 6, 8, 10 and 12 Sleeves, B. & S. Gauge. Nos. 6, 8, 10, 12 and 14 Iron wire, Nos. 4, 6, 8, 10 and 12 Copper wire.

Fig. 132-5

No.	Size	Weight per doz.	Price per doz.
132-5.	11½ inch.....	17½ lbs.	\$32.00

For Nos. 6, 8, 9, 10, 12, 14 and 16 Iron wires, Nos. 4, 6, 8, 9, 10, 11, 12 and 14 Copper wires, Nos. 6, 8, 9, 10, 11, 12 and 14 Copper Sleeves, B. & S. Gauge. Nos. 8, 9, 10, 11, 12, 14 and 16 Iron Sleeves, B. W. G. Gauge.

## OBLIQUE CUTTING PLIERS

Fig. 202-5

No.	Size	Weight per doz.	Price per doz.
202-5.	5 inch.....	4 lbs.	\$16.25
202-6.	6 inch.....	4½ lbs.	17.50

For close cutting and in confined places. Cuts through silk insulation. This tool is also used by Shoemen for cutting-out shoe buttons. Packed one in a carton. Have polished heads and black handles.

## CARBORUNDUM PRODUCTS

### ALOXITE CLOTH

Aloxite is the ideal abrasive material for cutting steel, and when coated on cloth it is far superior to emery for general machine shop work. It is exceedingly hard and extremely tough, and it not only does better and faster work than emery, but the Aloxite cloth, because of the toughness of the grain, shows much longer life.

#### ALOXITE CLOTH IN ECONOMY STRIPS

Some mechanics prefer Aloxite cloth in strips and to satisfy the demand, this material is made up in packages containing 15 strips 11 inches long and 1 1/4 inches wide either of one or assorted grits.

No. 66. Aloxite Cloth Strips (packages).....Price per gross \$21.60

#### ALOXITE CLOTH IN ECONOMY ROLLS

Aloxite cloth which is rapidly succeeding the old time emery cloth for general machine shop work is put up in economy rolls as well as in reams, sheets, and rolls. The cloth is cut in 1/2, 3/4, 1, 1 1/2, 2 and 2 1/2 inch widths, snugly wound on wood spools. The machine-shop operator simply cuts off a piece in any length of the width he desires. Loss of time and the destruction of good cloth by tearing strips from the regular sheets is eliminated. The rolls are 50 yards long and are made in any desired grit.

## CARBORUNDUM WHEELS—POWDER—STONES GRITS AND GRADES OF CARBORUNDUM AND ALOXITE WHEELS FOR VARIOUS CLASSES OF GRINDING

In submitting the following table of grits and grades of wheels for different kinds of grinding it must be distinctly understood that the information is general. Conditions under which wheels are used vary so greatly that we do not wish our present and prospective customers to accept the grading as our best recommendation for their work. If a customer orders a wheel from this table and finds that it is not accomplishing the work as he desires, we request that he write to us stating in what manner the wheel fails.

Work	Grit Numbers	Grade Letters
Brass	24 to 36	I to J
Cast Iron	20 to 30	G x to H x
Knives	60 to 80	M
Shoes	100 to 120	K to M
Tools (large)	30 to 40	I to J
Tools (small)	50 to 70	J to K
General use	30 to 40	H to J

## CARBORUNDUM AND ALOXITE GRAINS AND POWDERS

Carborundum and Aloxite grains are produced by crushing and grinding the crude crystals, washing and separating by sieves into various sizes. These are numbered, the same as emery, in accordance with the number of threads per lineal inch of the sieve through which they have passed as follows: 6, 8, 10, 12, 14, 16, 20, 24, 30, 36, 40, 50, 60, 70, 80, 90, 100, 120, 150, 180, 220.

Powders are the grains too fine to size by ordinary sieving. These are graded by floating in water. F, FF, FFF powders include in their numbers all grades of fineness from F, the next finest after No. 220, to FFF, which contains the very finest dust.

### PRICE LIST

Crude Carborundum Crystal (Selected)

Any quantity, carefully packed..... per lb. \$0.50

Carborundum and Aloxite Grains in Grits Packed for Shipment as follows:

Grains in 5 lb. tin cans..... per lb. \$0.20  
Grains in 1 lb. tin cans..... " .25  
Grains in 1/2 lb. tin cans..... " .30  
Emery Powder..... " .20

## CARBORUNDUM COMBINATION STONES

Made in Five Sizes

These stones are designed especially for carpenters and mechanics.

They are made with one face of coarse and one face of very fine grit. The coarse side can be used for sharpening very dull tools; the fine side for giving required keen, lasting edge.

No. 108.	8x2	x1	inches	per doz.	\$18.00

Above list is figured on a basis of Cylinders 7 inches long. Other lengths at proportionate rates. To obtain price of Cup Wheels, add to the price of Cylinder of same dimensions the price of a regular wheel whose diameter is the inside diameter of the Cylinder, the thickness whatever is required for the back of Cup Wheel.

FOR GRINDERS, ARBORS, ETC., SEE INDEX

Fig. 4M

## TOOL GRINDERS

## MECHANICS' SPECIAL LINE

Built for long life and hard usage. The cases are one-piece, which insures perfect alignment. The handle, drive gears and wheel are fastened by tapered bearings. Each machine is equipped with adjustable tool rests, for right or left hand use, and is finished in black, baked enamel. The gears are overhanging, the drive gear being dished so as to bring the weight over the bearing in place of at the end of the shaft. The gears are cut spiral, which makes them run quieter, smoother and last longer. Each machine is well packed in an individual carton. Each machine is equipped with a Carborundum grinding wheel

No. 4M.	Fitted with Tool Rest and Carborundum Wheel, 4x1 inch in size. Weight, boxed, 7 lbs. Price.....	\$4.50
No. 5M.	Fitted with Tool Rest and Carborundum Wheel, 5x1 inch in size. Weight, boxed, 9 lbs. Price.....	6.50
No. 6M.	Fitted with adjustable Tool Rest and Chisel Guide. Carborundum Wheel, 6x1 inch in size. Weight, boxed, 13 lbs. Price.....	9.00
No. 7M.	Fitted with adjustable Tool Rest and Patented Chisel and Plane Bit Guide, with Carborundum Wheel, 7x1 1/4 inch in size. Weight, boxed, 24 lbs. Price...	13.50

## CHALLENGE LINE

Low priced, but efficient. Finished in black baked enamel; equipped with Adjustable Tool Rest

No. 4C.	4x1 Carborundum Wheel; weight, boxed, 6 lbs. Price.....	\$3.50
No. 95.	5x1 Carborundum Wheel; weight, boxed, 8 lbs. Price.....	5.50
No. 96.	6x1 Carborundum Wheel; weight, boxed, 10 lbs. Price.....	7.50

Fig. 4C

Fig. 104C

## MULTIGEAR No. 104C

Built for high speed and very rapid grinding. Gears interchangeable, and made for hard wear and long life. Case oil tight. Finished in black, baked enamel. Each turn of the handle makes 30 turns of grinding wheel. Fitted with adjustable Tool Rest, and Wheel 4x1 inches in size. Weight, boxed, 8 lbs. Price.....

\$7.50

## BEST MADE No. 51

Worm Gear, Ball Bearings, runs in oil. Chambered Case, which allows oil to automatically lubricate every bearing. Wide bearings, which insure ample oil retaining surfaces. Adjustable Tool Rest, case finished in black, baked enamel. Exceptionally well built, easy running machine. Equipped with double grit Grinding Wheel, having extra fine face, and medium body. Grinder can be swiveled to any position.

Equipped with 5x1 1/2 inch Carborundum Double Grit Wheel. Weight, boxed, 12 lbs. Price.....

\$9.00

Fig. 51

## TOOL GRINDERS

## HUMMER No. 271C

Hummer. Fig. 271C

All Metal Frame, Shaft Drive, gravity lubrication, Grinding Head capable of being swiveled to any angle, Beveled Gears, strongly braced, Bicycle Tread, many special attachments, finished in red and black baked enamel. This is by all means one of the very best foot power grinders imaginable. It operates as easy as a bicycle and cuts many times faster than emery, without drawing temper. It does not matter how difficult a tool may be to grind, the head of the machine can be swiveled so as to make it convenient to grind even the most difficult tool. The two combination tool rests are universally adjustable, so that practically any angle or shape can be given to any tool. Height of machine over all, 42 inches. Each machine is equipped with one medium Carborundum Wheel, one coarse Carborundum Wheel, one Universal Tool Rest, and one Chisel and Plane Bit Guide. 6x1 3/4 inch Wheels. Weight, boxed, 65 lbs. Price.....\$20.00

Fig. 309C

## POWER BENCH GRINDERS

Built very strong and heavy and suitable for all kinds of shop and heavy grinding. Power Bench Grinders Nos. 310C and 309C are equipped with 2 1/4 x 2 1/4 inch Pulleys, Spring Oil Cups, adjustable Tool Rests, and 7x1 1/4 inch Carborundum Wheels. The bearings on these machines are steel on gray iron. Those on No. 310C are adjustable, while those on No. 309C are solid. The wheels on these machines are fastened by collars and burrs.

No. 309C is equipped with one medium and one coarse 7x1 1/4 inch Carborundum Wheels, one Pulley, solid bearings. Weight, boxed, 32 lbs. Price.....\$15.00

No. 310C is equipped with one medium and one coarse 7x1 1/4 inch Carborundum Wheels. Tight and loose Pulleys, adjustable bearings. Weight, boxed, 35 lbs. Price. 18.50

No. 306C. A lighter Power Bench Grinder, built for long life, equipped with adjustable Tool Rests, 6x1 inch Carborundum Wheels (one medium and one fine), held by steel collars and burrs. Power can come from above, at the side or underneath. One pulley only, 1 3/4 inch diameter by 2 1/2 inch face. Weight, boxed, 14 lbs. Price.....\$10.00

No. 305C. is a very practical Power Bench Grinder, which can be clamped to almost any beam, bench or other support, and run by a 2 inch pulley. Equipped with one medium Carborundum Wheel, 5x1 3/8 inches in size. Weight, boxed, 15 lbs. Price..... 6.00

Fig. 305C

Fig. 401C

## "ON THE JOB" GRINDER

We show here an emergency and portable foot-power grinder, giving 3,000 revolutions per minute; cool cutting; wheel 6x1 1/2 inches; made of genuine corundum. No belts to slip, no gears to break, no chains to stretch. We absolutely guarantee 40 per cent more utility than any other grinder on the market regardless of size or price. It is the only foot-power grinder on the market with an unlimited guarantee. Just the thing for a boat house, small shop or engine room. Weighs only 9 pounds complete. It can be attached to any bench or shelf and removed in one minute's time when done with.

Each .....\$6.00

## ELECTRICALLY-DRIVEN TOOLS

### BENCH GRINDERS

These machines are of practical value for any class of grinding and may be used anywhere in shop or mill where current is available. The motor is completely inclosed, with starting and stopping device conveniently located in the base. There is practically no cost for setting up. Can also be used as portable grinders.

Extended spindle for buffer in place of one wheel can be furnished.

### FLOOR GRINDERS

These grinders are very substantially and carefully made, with self-oiling bearings of large and ample size. The shaft is very stiff and tool rests are easily adjusted for any position. The motor is particularly designed for this service, completely inclosed from dirt or emery grindings, and is constructed with the greatest care in every detail. The motor frame and pedestal are one casting, and the starter is contained in the pedestal where it is out of the way and well protected.

When desired, a surface grinding attachment for one of the wheels, hoods for both wheels, or extended spindle for buffing can be supplied.

### PRICES

Size	110-220 V. Direct Current	110-220-440 V. A. C. 2 or 3-phase 60 cycle	110-220 V. A. C. Single-phase
No. 1 Bench	\$150.00	\$160.00	\$170.00
No. 2 Bench	180.00	190.00	200.00
Floor Grinder	274.00	284.00	294.00

These prices cover above grinders equipped with guards, wheels and water pot. Cast-iron pedestals can be furnished for either the No. 1 or No. 2 for \$24.00 additional.

The speed of these grinders will vary somewhat from the speeds given according to the voltage and kind of current ordered.

### HAND GRINDERS AND BUFFERS

These portable machines are adapted not only for grinding, but also for buffing, polishing, sanding or smoothing down castings; different wheels being required for different classes of work. Can be carried from place to place, and are ready for use when plug is fitted to lamp socket. Operators can stop and start these tools instantaneously. The

motor is air cooled. Furnished with wheel, as shown.

Size of Wheel	Dimensions, inches		Wt. Lbs.	H. P.	Speed R. P. M.	Price, each		
	Machine	Motor				Direct Current	2 or 3- phase	Single- phase
5x3/8 x 1/2-in. hole	5x9 3/4 x 10 1/2	5x7 1/4	16	1/4	3600	\$90.00	\$85.00	

Wound for either 110 or 220 volts, direct or alternating current, 60 cycles.

Made in larger sizes, also with 12 and 20-inch extension arms. Prices on application.

Note.—Speeds of all the above grinders vary somewhat from those given, according to voltage and kind of current.

## CROWN COUNTERSHAFTS

Fig. 6

All loose pulleys on Countershafts have long chamber hubs fitted with grease cup and will run for years and not wear out or wobble.

## No. 1 PORTABLE SHAFT KEYSEATER

This machine will mill keyseats in shafting up to 5-in. diameter without taking the shaft down. It will mill keyseats up to 1 1/2 x 5 in., full width, at one cut. The keyseats cut have true sides and bottoms and are without chatters. The machine is self-centering and has automatic feed. Five cutters are furnished with the machine, with which keyseats from 1/4 to 1 1/2 in. wide, and varying by 1-16 in., may be cut at one operation. Each.....\$50.00

Fig. 530S

# HACK SAW FRAMES, CHAIN AND BENCH DRILLS

## BENCH DRILL PRESS

## CHAIN DRILL

## CHAIN DRILL

Fig. 210

Strong cast iron standard. Hand feed. Instantly changeable speed,  $1\frac{1}{2}$  to 1 and 4 to 1. Adjustable crank, extensible from 3 to 6 inches in radius. Chuck of Star pattern, holding round shanks from 0 to  $\frac{1}{2}$  inch; and jaws operated by springs that are protected from injury. Height over all, 24 inches. Maximum distance from chuck to table, 9 inches. Weight boxed,  $27\frac{1}{2}$  lbs.; net, 22 lbs.

Price each \$8.00  
Packed 1 in a Wooden Box

Fig. 820

Free acting, hand feed. Four feet of stout chain. Ball bearing. Diameter of hole in socket,  $\frac{1}{2}$  inch. Barber improved chuck is provided, made especially for holding bit stock shanks and many sizes of round shanks. Length, with chuck inserted, 10 $\frac{1}{2}$  inches.

No. 820. Each \$2.50

Fig. 718

Automatic, self-regulating feed or may be fed by hand. Four feet of stout chain. Ball bearing. Diameter of hole in socket,  $\frac{1}{2}$  inch. Master chuck is added for holding round shanks from  $\frac{1}{4}$  to  $\frac{1}{2}$  inch in diameter, bit stock, and Morse taper shanks. Length, with chuck inserted, 11 $\frac{1}{2}$  inches.

No. 718. Each \$3.00

Above Drill without Master Chuck  
No. 717. Each 2.00

## STAR HACK SAW FRAME

Fig. 1027

Polished and nicked steel frame. Black composition "Pistol Grip" handle that fits any hand. Perfectly balanced frame with extra strength in the middle of the back. Blades faceable in four directions. Adjustable for blades 8 to 12 inches. Depth under back,  $3\frac{1}{2}$  inches.

No. 1027. Each \$1.50

## STAR HACK SAW FRAME

Fig. 66

Tropical wood handle. Nicked steel stock, stiff strong back. Quickly adjustable for blades 6 to 12 inches. Blades are strained by turn of handle and are faceable in four directions. Depth under back,  $2\frac{1}{2}$  inches.

No. 66. Each \$1.30

## No. 77

Fig. 77. Star Hack Saw Frame

Burnished and nicked steel stock,  $5/32 \times 5/16$  inch. Adjustable for blades from 8 to 12 inches in length. Blades may be faced in four different directions. Depth under back,  $2\frac{1}{2}$  inches.

No. 77. Per dozen \$6.00

## RAIL HACK SAW FRAMES

Fig. 6

Nos. 6, 7, 8, 9, 10, steel frame, polished, riveted sockets. These are specially adapted for large work, cutting off iron beams, girders, etc. and will be found a very valuable tool for contractors.

No. 6.  $7\frac{1}{4}$  inches inside of frame to tooth-edge, suitable for 9 inch blades; frame only. per dozen \$15.00

No. 7.  $10\frac{1}{4}$  inches inside of frame to tooth-edge, suitable for 12 inch blades; frame only. per dozen 18.00

No. 8.  $10\frac{1}{4}$  inches inside of frame to tooth-edge, suitable for 14 inch blades; frame only. per dozen 19.00

No. 9.  $10\frac{1}{4}$  inches inside of frame to tooth-edge, suitable for 16 inch blades; frame only. per dozen 23.00

No. 10.  $10\frac{1}{4}$  inches inside of frame to tooth-edge, suitable for 18 inch blades; frame only. per dozen 28.00

Nos. 9 and 10 made with handle on each end.

Fig. 30. Cast Iron Hack Saw Frames

Cast iron, handsomely enameled. Made for 8 inch or 9 inch blades.

No. 30. For 8 inch blades. per dozen \$5.00

No. 30. For 9 inch blades. " 6.00

FOR POWER HACK SAWS, SEE INDEX

## MARVEL DRAW CUT HACK SAW No. 1

Saws fast and straight. Saves blades.

Is exceptionally well made, and includes the following valuable improvements:

**A draw cut.** An eccentric on inner portion of crank, fitted to an arm that presses against the coiled steel spring, through which extends a steel rod, hooked firmly to rear portion of saw frame bearing, the tension pressing the saw down on material on the draw cut. On return or push motion the tension releases. The tension on spring is regulated by hand nut at end of spring.

**A quick action vise that saves time.** Saws close to vise.

**A device that raises or lowers saw and holds it** at any desired angle, allowing free use of both hands in measuring material.

**An extension to table** so material rests on both sides of saw.

**The wear** can be taken up to any extent in the two saw bearings, which have also receptacles for oiled waste. The slide is of square steel set on the quarter so that wear can be taken up absolutely straight.

The drive shaft has bronze bearing.

Starter and automatic stop are at front of machine.

Capacity—4x4 inches. Length of blade—12 inches. Size of pulley—13x2 3/4 inches.

Revolutions—60 to 90 per minute. Takes 2 1/2 inch belt.

Net weight—110 lbs. Shipping weight crated—120 lbs.

List price.....\$16.75

## MARVEL DRAW CUT HACK SAW No. 2

With Swivel Vise that Swivels Both Ways

Saws Fast and Straight. Saves Blades

Heavy and exceptionally rigid in construction.

Pressure on saw blade is actuated by an eccentric in connection with the compression spring, alternately pressing on the draw stroke and relieving on the return stroke. The tension on spring is regulated by hand nut at end of spring.

Feed lever at top carries tension thumb screw, and should be left engaged when sawing medium or light material. The same lever raises or lowers saw and holds it in any position, a great convenience in measuring.

The quick action, heavy vise swivels both ways so that material can be inserted to cut on an angle either way.

The wear can be taken up to any extent in the two saw bearings which have also receptacles for oiled waste. The slide is of square steel set on the quarter so that the wear can be taken up absolutely straight.

The drive shaft has bronze bearing.

Starter and automatic stop are at front of machine.

Has adjustable stroke. Longest 6 3/4 inches, shortest 4 inches.

Capacity—6x6 inches on long stroke, and 8x8 inches on short stroke.

Takes blade from 12 inches to 17 inches. Revolutions—50 to 70 per minute.

Size of pulley—17x3 3/4 inches. Takes 3 inch belt.

Net weight—260 lbs. Shipping weight crated—285 lbs.

List price.....\$35.00

FOR HACK SAW BLADES, FILES, AND SCREW SLOTTERS, SEE INDEX

## THE MARVEL HIGH SPEED SAW No. 5

## WITH AUTOMATIC STOCK FEED

The stock feeding attachment raises the saw frame, opens the chuck, feeds the bar forward, closes chuck and starts a new cut in 0.0 seconds. The saw frame always moves in a horizontal position, is actuated by a crank lever which imparts a smooth, even cutting stroke to the saw blade, and gives a quick return.

The entire blade can be used up by shifting the saw frame by means of a right and left screw on the connecting rod while running.

The chuck has liberal dimensions with jaws which extend out flush with saw blade. It can also be shifted forward or back and will swivel to either right or left for cutting on an angle. Stops in a lot in saddle in back of machine and easy of access are two dogs, upper one of which may be instantly set to stop the cut at any desired depth. The stroke can be changed from four to six and one-half inches by means of shifting bolt in the crank.

The pump. This machine is provided with the old reliable plunger pump with ball valves and overflow tank which gives a steady stream of compound on the saw blade. It is immersed in the bottom of tank. Pump and all connections may be removed in five minutes by removal of the two cap screws in outer wall of large tank. The saw cuts on the draw stroke and lifts free of the cut on the return. Capacity, 1 inch by 6 inch.

Takes 3-inch belt. Speed, 135 R. P. M. for varied carbon steel (using short stroke on high carbon), 145 R. P. M. when all cutting is low carbon. Size of Pulley, 6x3 1/4 inches. Net weight, 565 lbs. Weight, crated, 650 lbs.

This machine can also be furnished motor driven, if desired.

List Price ..... \$175.00

FIG. 680A

## LITTLE GIANT POWER HAMMER

The main frame of this hammer is one solid casting, facilitating and simplifying erection. The ram or striking head is a steel casting with machined bearings and runs in a pressed steel channel which is provided with means for taking up wear. The dies are tempered tool steel placed in machined seats and held in position by dowel pins and keys.

The crank plate and connection between ram and crank pin, form a combination, giving to the ram a balanced reciprocating motion and a perfectly cushioned blow at both upper and lower extremities of the stroke.

Hammer has adjusting knuckle, the raising or lowering of which adjusts the hammer for work on large or small material. Crank box is brass and fitted with grease cup. Babbitted shaft boxes are long with take-up for wear.

The friction spider is keyed to shaft and has a long hub forming bearing for pulley. The pulley has compression grease cup lubricating the pulley through the hollow shaft. The friction is operated by a foot treadle provided with spring for releasing the friction automatically. The friction device disposes of the countershaft as hammer can be belted direct to line shaft and run in either direction. The dies regularly furnished are adapted for general blacksmithing. Special dies of any kind can be supplied.

FIG. 680B

## HACK SAW BLADES

Prices Apply to Both ALL HARD and HARD EDGE Blades Either Hand or Power

These blades, because they cut with less resistance, remove no more metal than necessary, and outwear other makes, are the most economical Hack Saw Blades on the market.  
The steel used in them is made and toughened by a special process for hard cutting service. It is the basis on which this exceptionally high grade blade is built.

## PRICE LIST HAND HACK SAW BLADES

Length Inches	Width Inches	Gauge	Number of Teeth per Inch				List Price per gross	Number in Box, gross
			Regular	Medium	Fine	Extra Fine		
8	1/2	23	14	18	24	32	\$8.00	1/2
9	1/2	23	14	18	24	32	9.00	1/2
10	1/2	23	14	18	24	32	10.00	1/2

16	1/2 or 5/8	23	14	18	24	32	17.00	1/2

Odd sizes, not listed, take price of next longer or wider size of same gauge.

**Regular**—For cutting soft steel, iron solids, and rails.

**Medium**—For cutting tool steel, iron pipe, hard metals, and light angle iron.

**Fine**—For cutting brass, copper, drill rod, medium tubing, and sheet metals.

**Extra Fine**—For cutting thin tubing and thin sheet metals.

Unless specified, "Regular" blades will be sent.

## RAIL OR POWER MACHINE HACK SAW BLADES

Length Inches	Width Inches	Gauge	Number of Teeth per Inch			List Price per gross	Number in Box, gross
			Regular	Medium	Fine		
10	5/8	21	12 or 14	18	24	\$12.00	1/2
10	5/8	21	12 or 14	18	24	13.50	1/2
12	5/8	21	12 or 14	18	24	14.40	1/2
12	5/8	21	12 or 14	18	24	16.20	1/2
14	5/8	21	12 or 14	18	24	16.80	1/2
14	5/8	21	12 or 14	18	24	18.90	1/2
17	5/8	21	12 or 14	18	24	22.95	1/2

**Regular**—For cutting solids in iron or steel, and for general shop saw work.

**Medium**—For cutting brass, castings, iron pipe, heavy tubing, etc.

**Fine**—Where fine tooth is deemed necessary.

We recommend (and unless otherwise specified, furnish on orders) power blades with 12 teeth, rather than 14 teeth, as they will cut faster and last longer.

\*This number of teeth furnished unless the optional number is specified.

14 inch and 17 inch power blades measure 13 1/4 inches and 16 1/2 inches between centers of holes respectively. All other power blades measure from center to center of holes.

Odd sizes, not listed, take price of next longer or wider size of same gauge.

Unless specified, "Regular" blades will be sent.

## GENUINE REED VISES

## REED COMBINATION PIPE VISES

With Solid Pipe Jaw

Fig. 931A. Stationary

Fig. 931B. Swivel.

For severe service, and having ample cross section at all points where metal is needed. Solid tool steel pipe jaws, oil tempered with front jaw reversible. The main nut has a milled base which fits into a milled slot in the body. All jaws have hardened tool steel facings. All parts finished to limit gauges, and interchangeable. The swivel base improved by lugs on the base plate so that it may be securely bolted to the bench, instead of using wood screws.

## PRENTISS' VISES

Prentiss' Patent Self-Adjusting Jaw Vises, are of superior quality and workmanship, and possess manifest advantages. With the patent swivel bottom and late improvements in manufacture, the Prentiss' Vise needs only to be seen to be approved; and being complete in itself, without "attachments," it possesses, in addition to its own peculiar advantages, all the merits claimed for other vises.

The back jaw of this Vise is Self-Adjusting and in use conforms by automatic action to any angle, adjusts itself, and makes firm the object held, whether it be straight, bevelled or wedged-shaped. By inserting pin A, the jaw becomes fixed, thus making a parallel solid jaw Vise.

The Self Adjusting Jaw, resting and working as it does upon and against the solid body of the Vise, is thereby rendered absolutely as strong and durable as a solid jaw.

## 20th CENTURY PIPE VISE

Fig. 285

Strongest Pipe Vise Made.

More Convenient and More Durable than Old Style "Malleable Vise."

Can be Used on Bench or Post, in any Position.  
Finest Finish. Best Materials.

Guaranteed Superior to any other Pipe Vise

No. 285	Holds ¼ to 2 in. pipe. Weight 8 lbs....	\$ 5.00
No. 286	Holds ¼ to 3 in. pipe. Weight 18 lbs....	7.50
No. 288	Holds ¼ to 4 in. pipe. Weight 40 lbs....	14.00

## TABLE CLAMP VISES

Fig. 152

These vises have wrought steel sliding bars, screws and levers. The jaws are hardened and checked. Each vise is provided with handsomely polished anvil. The screws are large and smoothly cut. The clamp is very much heavier than on other makes of Table Clamp Vises, thus insuring against breakage. The vises are very highly finished.

We guarantee these Clamp Vises, to be the strongest, best made, finest finished and most thoroughly satisfactory and attractive line of vises of this style ever offered on the market.

No. 152	Jaws 1½ in. Opens 1½ in. Weight 1½ lbs....	\$0.30
No. 153	Jaws 1¾ in. Opens 1¾ in. Weight 2½ lbs....	.60
No. 154	Jaws 2 in. Opens 2 in. Weight 3 lbs....	.75

## MISCELLANEOUS VISES MARVEL DRILL PRESS VISE

Fig. 40

This tool fills a long felt want for a work holder or vise with deep liberal jaws, the whole being of medium weight, with quick acting slideable jaw and of sufficient strength and yet not cumbersome to handle.

Is machined true on all sides, may be used laid on one side when desired, and has clamping strip around entire edge, and also an elongated slot in solid jaw suitable for clamping the vise itself or clamping bushing holders for jig work, etc.

The jaws have sufficient overhang at one side to take in long upright pieces 2 1/2 in. diameter on the No. 40 and 3 in. diameter on the No. 41.

	Capacity	Width of Jaws	Height of Jaws	Weight	Price
No. 40.	5 inches	5 5/8 inches	2 1/2 inches	28 lbs.	\$10.00
No. 41.	8 inches	7 inches	4 inches	56 lbs.	12.25

## MALLEABLE HINGE PIPE VISE

### Latch Pattern

This vise is designed to give the greatest strength and durability with the least weight. The yoke, base and slide are made of malleable iron. It is fitted with self-locking latch as well as bolt and chain, and since the base has lugs on both sides, the vise may be opened either way.

### Price List

# VICES

Fig. 3/0X

Parker Vises are adapted to locomotive works, car builders, wood workers, machinists, gun, sewing machine and carriage manufacturers, jewelers and artisans generally. These Vises are made with a patented reinforced sliding jaw, consisting of a solid steel bar inserted the entire length of the slide, and thoroughly welded into the casting, thus rendering the slide, or movable jaw, practically unbreakable. No other Vises made have this feature, and in connection with the fact that the Vises are made from a mixture of cast iron and Bessemer steel, we unhesitatingly guarantee them to be one of the strongest and most durable Vises in the market.

Fig. 21X

the tire length of the slide, and thoroughly welded into the casting, thus rendering the slide, or movable jaw, practically unbreakable. No other Vises made have this feature, and in connection with the fact that the Vises are made from a mixture of cast iron and Bessemer steel, we unhesitatingly guarantee them to be one of the strongest and most durable Vises in the market.

## "VULCAN" DROP-FORGED CHAIN PIPE VISE

For Holding Pipe, Bolts, Bars, Shafts, etc., from 1/8 to 8 Inches in Diam.

These Vises are unbreakable, compact, rapid in action and positive in gripping pipe. All are equally serviceable upon and suitable for fastening to bench or post. The smaller sizes are well adapted for carrying by hand or in tool bag.

Adjustment is quickly effected by slightly turning the screw, and further quick adjustment is gained by engaging the projecting rivets of chain with a series of bosses on base.

They are made entirely of wrought steel; the drop-forged jaws are of saw-tempered steel for file-sharpening. The hand-made chains are of same quality as those of our Vulcan Chain Pipe Wrenches; all parts are fully guaranteed.

The jaws of size No. 1 are designed to prevent the bending of weaker and smaller sizes of pipe, should an excess of chain pressure be placed upon them.

#### DIRECTIONS

In order to open the Jaws, lift the handle to a horizontal position, or as high as it will go, and draw towards you, in this way the Sliding Jaw can be moved instantly to any position. In order to grasp the work, push in the Sliding Jaw until it presses against the work; then depress the handle, which causes the Jaws to securely grasp the work.

#### A COMBINATION PIPE VISE AND ANVIL

This vise is especially adapted for automobile repair work. There is nothing on the market so suitable for all kinds of repair work. This vise is very heavy, is made of same material as the other well-known types.

## VICTOR "JERSEY" VISES

Victor "Jersey" Vises are strong, serviceable tools, and have long been popular with both mechanics and amateurs. The screw (body, head and collar) is in one piece, turned from cold rolled steel, and has a square, lathe-cut thread. The steel jaws are hardened, and all jaws are ground to insure that they meet squarely when tightened. Both back and front jaws are filed to a fit.

FOR COMPLETE LINES OF MACHINIST AND BLACKSMITH TOOLS, SEE INDEX

## STARRETT TOOLS

## BLACKSMITHS' STEEL RULES

Fig. 400  
Folding

Made of best quality spring-tempered steel. Two feet long,  $\frac{3}{4}$  inch wide, 12 inch joints, 2 fold. Graduated in 8ths of an inch on one side and 16ths on the other.  
Price, per dozen ..... \$6.00  
Price, each ..... .50

## NARROW HOOK RULES

Fig. 422

Designed for use in taking measurements through small holes where regular hook rules cannot be used. They can also be used for setting inside calipers, etc. Measurements through holes as small as  $\frac{3}{8}$  inch can be obtained.  
The rules are graduated one side in 32ds and the other in 64ths of an inch.

Length, inches ..... 4 ..... 6 ..... 9 ..... 12  
Price ..... \$0.70 ..... .90 ..... 1.25 ..... 1.50

## STARRETT PATENT KEY-SEAT RULE

Fig. 100

The Starrett patent key seat rule is an improvement over the ordinary type in that the machinist's scale is used as part of the key seat rule. This is made possible by a device which holds two straight edges together in the form of a box square. One of these rules is a plain straight edge and the other the rule with which the machinist ordinarily works. The two edges forming the box square when applied to the surface of the cylindrical piece keep the graduated edge of the rule in a line parallel with the axis.

The steel auxiliary straight edge is either plain or graduated in 32ds, and 64ths as desired and sent when ordered. Unless otherwise ordered the key seat rule is sent without auxiliary straight edges.

## Prices

No. 105A. 6 inch ..... \$2.25  
No. 105B. With auxiliary straight edge, plain, 6 inch. 2.75  
No. 105C. With auxiliary straight edge, graduated, 6 inch ..... 3.00

One edge only is beveled, and this to  $\frac{1}{16}$  inch thick from  $\frac{1}{2}$  to  $\frac{3}{8}$  inch back.

## COMBINATION STRAIGHT EDGE

Fig. 167

The needle carriers at each end swing on taper studs, and carry needle-pointed brads frictionally held in their split ends. These may be swung to bring the points close to the working edge, and by a slight turn of a knurled nut may be rigidly locked, holding the straight edge bradded to the paper. Using one brad secured at the working edge and the swinging the jointed arm, the protractor being removed, over against the straight edge to form a corner to place pencil, circular lines may be struck any desired size, and radial lines drawn to perfection. The straight edges, either graduated or plain, will be furnished with the brad carriers without the other attachments, or with any or all of them, making a complete set—the different lengths governing the price. Those having use for the set will highly appreciate it. They are also furnished plain without carriers.

## Prices

	Not Graduated	Graduated in 32ds
18 inches long, $1\frac{1}{4}$ wide	\$2.25	\$2.25
24 inches long, $1\frac{1}{2}$ wide	2.75	3.50
30 inches long, $1\frac{3}{4}$ wide	3.50	4.75

48 inches long, $1\frac{3}{4}$ wide	5.00	6.75
48 inches long, $1\frac{1}{2}$ wide	5.75	8.00

Extra needle points, 30 cents per dozen; extra needle holders, 10 cents each. In ordering the latter, mention the width of straight edge blade.

## ADJUSTABLE METAL EDGE

Fig. 168

We furnish a metal T rail, or straight edge with attachments to secure it to end, or end and side of drafting board or table. These are ground perfectly straight and are nickel plated. The T square used against this insures more accurate results than can be obtained by working against a wooden board or table.

## Prices

## STARRETT TOOLS

## SPECIAL STANDARD SQUARE

Fig. 8

Specially designed for the use of manufacturers who desire to keep a reliable standard. Hardened blade.

## Prices. No Center Heads

18 inch, blade 1 1/4 inch wide, 5/16 inch thick; 3/4 inch stock, with 5 inch miter.....	\$5.00
24 inch, blade 1 1/4 inch wide, 5/16 inch thick; 3/4 inch stock, with 5 inch miter.....	6.00
Center head only, for either size, as shown under No. 17.....	1.00

## COMBINATION SETS

Fig. 9

The combination square met with such universal approval from machinists that it was but a step to add to it the protractor head and have a combination set, made up of the rule on which slide the square, center, and protractor-heads. This makes possible more varieties of uses in laying out and testing work than are possible with any other instrument used by mechanics. Hardened blade.

## Prices

## STARRETT TOOLS.

### PATENT INCLINOMETERS

Fig. 10

This cut represents an inclinometer, try square, and bevel protractor combined. It is compact, convenient, and a complete and perfect substitute for several costly tools.

It consists of a stock and disc, both slotted to receive the blade, which folds in the stock. The blade attached to the graduated rotary disc may be secured at any angle from 0 to 90 degrees, and by loosening the clamp screw it may be shortened or extended full length, or removed for a straight edge.

The working face of the stock, extending both sides of the blade, admits of its being reversed, so that the same angle may be laid off in opposite directions without changing the angle in the tool, thus requiring but 1/4 of a graduated circle to obtain all angles both ways.

At 90 degrees, the blade brings up against a case-hardened screw accurately adjusted, thus forming a try square; by holding the blade perpendicular the level in the stock (being at right angles), a plumb; by folding the tool, a level, length of blade.

The blades are graduated one edge each in 8ths, 16ths, 32ds, and 64ths.

#### Prices

With 12 inch blade, without center head.....	\$4.00
With 18 inch blade, without center head.....	5.00
With 24 inch blade, without center head.....	6.00
Center head, to fit all sizes.....	.75

Sent without center head unless otherwise ordered.

### PATENT PROTRACTOR

This protractor blade closes in the stock either way against a stop, making a perfect square, plumb and level. With a 24 inch blade it weighs but 1 1/4 pounds. The turret is graduated on both sides, one in degrees, the other to show pitch to the foot, so that the blade may be set by the graduation for laying off angles to any degree or any pitch, and the opposite branch of the stock will be right to lay out the complementary angle without mental calculation or error, for valley roofs, bridge work, stair gauges, etc. The levels are so arranged that work can be leveled up to any degree or pitch underneath or on top of a roof, rafter, stair stringer, etc.

Without the blade the stock may be used in contracted places as a 6 inch level and plumb, while with an 18 or 24 inch blade, a level and plumb of corresponding length is obtained. Altogether this tool makes a kit that will be appreciated by every progressive mechanic.

#### Prices

With 12 inch blade.....	\$4.75
With 18 inch blade.....	5.50
With 24 inch blade.....	6.00
Stock only.....	3.50

The 12 inch, 18 inch, and 24 inch blades of our combination squares will fit the protractor stock, but the 18 inch and 24 inch lengths are best adapted for this tool.

### NEW BEVEL PROTRACTOR

#### With Hardened Blade and Reversible Head

Fig. 400

This tool has the head extend both sides of the blade, which greatly increases the usefulness of the tool, as the same angles may be transferred from either side of the frame without resetting. Another improvement is that the turret is graduated to read both ways from 0 to 180 degrees. Mechanics will clearly appreciate this point, as direct readings may be had from the turret, indicating the supplement of the angle, as well as the angle required. There is but one zero line on the frame eliminates all possible chance of confusion as to whether acute or obtuse angles are obtained.

#### Prices

9 inch, complete.....	\$3.50
12 inch, complete.....	3.75
18 inch, complete.....	4.50
24 inch, complete.....	5.00

## STARRETT TOOLS

Fig. 24

## MICROMETER CALIPER GAUGES

This gauge is made to fit scales 1 1/4 inches wide, .085 inch thick, and 12, 18, 24, and 36 inches long, affording longer scope than anything of the kind heretofore made. The head of the gauge carries auxiliary Tram Points. Attachments are also made to slip on and off the ends of the caliper, so that they may be used to set inside or outside calipers for making close or drive fits. These attachments are made of the best tool steel, hardened and ground. The inside calipers are set against the inside face of gauge and resting on the seat of the attachments, which keep them in perfect line. The outside calipers are set against an extended seat of the attachment in line with the inside faces of the gauge so that both inside and outside calipers may be set to exactly agree with each other.

For measuring distances, the gauge may not only be set by the graduated scale but varied by the micrometer adjusting nut to read additional thousandths. The scale and all necessary working parts are hardened, making a first-class tool in every respect.

## Prices

36 inch .....	20.00
48 inch .....	26.00

Fig. 424

## SLIDE RULE CALIPER AND CIRCUMFERENCE GAUGE

This gauge has a double function—being graduated to read the circumference as well as the diameter of the thing measured, the relation of circumference to diameter being shown by the graduations on upper corners of the rule (capacity 3 1/4 inches, about 11 inches circumference). It was originally designed for rope or cordage manufacturers. It makes a first-class slide rule caliper of large scope, opening 3 1/4 inches. The jaws, being 1-5/16 inches deep, will caliper a cylinder up to 2 1/4 inches in diameter. The rule is graduated in 32ds of an inch standard and 16ths of an inch circumference measure.

Rule.—The circumference being shown by the gauge, multiply the same by the speed the lath runs per minute and the result will show the number of inches or feet the circumference is running and the tool cutting.

Price .....

Fig. 427

## CALIPER SQUARE

Designed primarily for use where extreme accuracy is not required, in measuring milled and planed surfaces, rough boring holes and in gauging duplicate pieces of work. It is made both plain and adjustable, the front side graduated to read in 64ths, and the reverse side graduated whole length in 32ds.

We can furnish these micrometers in corresponding metric sizes.

## HEAVY ONE INCH MICROMETER

Fig. 238

This micrometer is made with the frame and the other parts much heavier than the regular one inch micrometer and will last longer under hard usage, on account of its stiffness and because of larger bearing surface for the threads. Especially useful on grinding work and wherever it is necessary to take measurements after the lock nut is set.

To prevent wear the measuring surfaces and bearing parts are hardened. These micrometers have the decimal equivalents stamped on the frame and are packed each in a strong wooden box.

For measurements by thousandths up to one inch. Has ratchet stop and lock nut.

Price .....

## ONE INCH MICROMETER

Fig. 230

For measurement by thousandths up to one inch. The anvil is shortened for use in places where the ordinary anvil is too long to be inserted.  
Has lock nut and ratchet stop.

## Prices

No. 230 .....	\$6.00
In leather case .....	6.50

## HEAVY MICROMETERS

Fig. 239

Designed to meet the exacting demands of heavy and severe usage. The spindle and screw portion is of larger area than in the regular micrometer, insuring longer wear and greater rigidity; those from two inch to six inch inclusive, are made from drop forgings and the larger sizes, from seven inch to twelve inch, from steel castings. The bearing parts and measuring surfaces are hardened to prevent wear, and the same means provided for adjustment as in our other micrometers. Made with lock nut and ratchet stop. Sizes are stamped to show their capacity.

## Prices

## U. S. GOVERNMENT MICROMETER GAUGES

Designed and made to meet the requirements of the Government in making big guns and other work in the Ordnance Department of Government shops, where they are now used. The frames are cut from steel plates, nicely finished. The slides are covered with hard rubber, put on with brass screws, preventing inaccuracy through expansion caused by change in temperature when held in warm hands. The micrometer screw adjusts one inch, reading 1/1000 of an inch, and is provided with our patent lock nut. The different length tail spindles, forming anvils, are interchangeable and have positive stops to set against their socketed seats. The adjusting collars on these anvils have notches to facilitate the removal of dirt, which would prevent them from setting accurately against the seat. The contact ends of spindles are slightly convex, to prevent catching on cylindrical work. Furnished with ratchet stop or speeded screw thumb piece, as desired.

Furnished in case without extra charge.			
Prices on larger sizes quoted on application.			

## PATENT SIX INCH MICROMETERS

Fig. 128

This micrometer will measure round work to 4 1/4 inches, and flat work to 6 inches. It weighs 21 ounces, and is rigid and accurate. It can be quickly set to exact position, from 1 inch to 6 inches, by inserting a plug as shown. A valuable feature of this tool is a set of six independent

holes through both the movable part and the beam, each hole being bushed with hardened steel bushings, ground and lapped to fit the plug, which locates to exactness the various inch settings.

Price	.....	\$20.00
In leather case	.....	21.50
Sent with case unless otherwise ordered.		

## QUICK ADJUSTING METRIC MICROMETER, 25 MM.

For measurements by hundredths of a millimeter up to twenty-five millimeters.

Has ratchet stop and lock nut.

## Prices

No. 204M.	.....	\$10.00
In leather case	.....	10.50

Fig. 204M

## IMPROVED MICROMETER STAND

Fig. 206

Where frequent reference is to be made to a micrometer that is set at a given size, or where a number of pieces must be made of the same size it is sometimes more convenient to bring the work to the micrometer than to bring the micrometer to the work. The use of a micrometer also occupies

one hand, while, if the mechanic could use both hands he could work faster. To meet such conditions as these we offer the Starrett Improved micrometer stand. This consists of a solid base with a tilting bracket having a clamp which holds the micrometer in any convenient position. A turn of the winged nut locks in place both the hinged bracket and the micrometer. Both hands are then free for the work.

Price, each	.....	\$2.00
-------------	-------	--------

## HUB MICROMETER

This micrometer is especially useful in the manufacture of cutters and such articles where exact hub lengths are required.

The frame will easily pass through a 3/4 inch hole. The micrometer is made for measurements by thousandths up to one inch. Has lock nut and ratchet stop.

Fig. 228

## Prices

No. 228.	.....	\$6.00
In leather case	.....	6.50

## MICROMETER HEADS

## English, One Inch

Fig. 263

These heads are easily attached to tools or machines when fine measurements are required. They have ratchet stops, and are graduated to read to thousandths of an inch. They will be furnished without ratchet or lock nut when so desired, at same price.

Price	.....	\$3.50
-------	-------	--------

## BENCH MICROMETER

For measurements by thousandths or ten thousandths up to one inch.

This caliper is made with a heavy base, which makes a very rigid and accurate tool, and will be found of advantage to inspectors, watch-makers, etc., who need to take fine measurements on work of such a class that it can be better inspected when used on a bench. This micrometer can also be supplied with regular anvil and spindle in place of those shown in cut when so desired.

Made with lock nut and ratchet stop. Can be supplied without ratchet stop at reduction of 50 cents from price given.

## STARRETT TOOLS

## INSIDE MICROMETERS

Fig. 120-A

Both have screw and nut same as our Improved No. 3 Micrometer Caliper and read in thousandths. Set A measures from 2 inches to 8 inches, has  $\frac{1}{2}$  inch movement of screw and requires four extension rods. The rods are provided with a hardened steel adjustable anvil in ends, which permits adjusting for wear. A small binding screw locks rods when set. Rods are marked in  $\frac{1}{2}$  inch divisions and set to a similar line on a projection of the barrel.

Fig. 120-C

Set C is similar in all respects with the exception that it measures from 8 inches to 32 inches with four extension rods, and has a lock for the rods; and has one inch movement of the screw. This is a very strong and serviceable tool as well as an accurate one. We can furnish rods of extra lengths for these tools when desired.

Handle

When so ordered an auxiliary handle accompanies Sets A, B, and D, which is used by removing the nut opposite the lock nut and screwing the handle in place of same, thereby enabling one to take measurements in holes and other places where the micrometer could not otherwise be used.

## Prices

Set A. With 4 rods, to measure from 2 to 8 inches, with case \$4.75, without .....	\$4.00
Set B. With 7 rods, to measure from 2 to 12 inches, with case \$6.00, without .....	5.00

Handle, extra .....	.50
Extra rods at 5 cents per inch.	
Sent with case unless otherwise ordered.	

## STANDARD END MEASURING RODS

Fig. 234

These rods are made of steel, hardened and lapped spherical on the ends with a radius of one-half the length of the rod. The handles are of rubber, two-thirds the length of the rod, and guard against any expansion due to change in temperature when held in the hands, thereby maintaining their accuracy under adverse conditions. The one inch and 25 mm. are in the form of a round disc, as shown in cut.

2 inch to 6 inch are  $\frac{1}{4}$  inch diameter with handles  $\frac{7}{16}$  inch diameter.  
6 inch to 12 inch are  $\frac{3}{8}$  inch diameter with handles  $\frac{5}{8}$  inch diameter.

## ADJUSTABLE CALIPER GAUGE

Fig. 125

Designed for internal measurements of large cylinders and of distances between uprights. The body of the tool is a steel tube provided with a binding chuck on each of its ends. Into one end is clamped a plain rod, that, when the chuck is loosened, can be quickly adjusted to any approximate size. Into the other end is screwed a threaded anvil for fine adjustment.

Made from steel throughout, and nicely finished.

## Prices

2½ inch, with three rods, capacity from 2½ inches to 6½ inches .....	\$1.00
6 inch with three rods, capacity from 6 inches to 16 inches .....	1.25
The diameter of the steel rod is .150 inch. Extra rods furnished at 3 cents per inch.	

## MICROMETER CALIPER GAUGES

Fig. 126

Designed for close internal measurements, indicating thousandths where a definite distance in inches is not essential. The body of the tool is a steel tube, provided at one end with a binding chuck in which are fastened the plain rods, and it can quickly be adjusted to any approximate size.

## Prices

Capacity 2½ inch to 10 inch (with five rods) .....	\$2.00
In leather case .....	2.75
Extra rods at 3 cents per inch.	
Sent without case unless otherwise ordered.	

## INSIDE MICROMETERS

Fig. 121

When linear measurements are beyond the capacity of the ordinary micrometer it is frequently necessary to have a more accurate instrument than the rule or steel tape. The inside micrometers shown here were designed for and are now used by the Government in navy yards and arsenals. They consist of steel tubes with telescoping extensions combined with a one-inch screw micrometer movement. The tubes are accurately graduated and figured in inches and set to the inch marks showing the length wanted, and are firmly held by a knurled locking nut. The ends of the rods have hardened steel anvils. Combinations are possible which give a range from 32 to 107 inches and with micrometer accuracy over the whole range. A case is furnished with each set.

## Prices

Set A. Stock with one rod, 32 to 57 inches .....	\$25.00
Set B. Stock with two rods, 32 to 82 inches .....	30.00
Set C. Stock with three rods, 32 to 107 inches .....	35.00

## UNIVERSAL BEVEL

Fig. 15

Another valuable feature is, one edge of the case being solid, a rest is formed, directly under the blade, where thin templates may be placed and accurately fitted.

Price, 3 inch.....\$1.50

## COMBINATION BEVEL

Fig. 19

ing out work, measuring, or showing any angle desired. The stock is about 4 inches long.

Price.....\$2.00

## PROTRACTOR

Fig. 13

square, or for a large number of other uses which will readily occur to a machinist or draftsman, and will be found reliable, and very satisfactory by any mechanic, especially those who do not care to pay for a more expensive tool.

Price.....\$1.50

These are instruments from which the exact size of holes or slots can be taken by an outside caliper or micrometer, so that shrink, close or loose fits, varying in thousandths, or less, can be made and measured.

Improved features. The set-off in the blade increases its capacity and usefulness for bevel gear work, etc., so that any angle, however slight, may be obtained.

Bevel has a stud riveted in the straight edge stock or head, on which split blade is hinged, to swing over stock and be clamped at any angle. The slotted auxiliary blade with clamp bolt may be slipped on to the split blade and be clamped at any desired angle and used, in combination with the stock of the other, for laying out work, measuring, or showing any angle desired. The stock is about 4 inches long.

Graduated in degrees from 0 to 90, both ways. Blade is 6 inches long. Set firmly by a slight turn of the nut. The back of the tool is flat. This protractor is accurate, and is convenient for setting bevels, for transferring angles, as a small T-square, or for a large number of other uses which will readily occur to a machinist or draftsman, and will be found reliable, and very satisfactory by any mechanic, especially those who do not care to pay for a more expensive tool.

Price.....\$1.50

## UNIVERSAL BEVEL PROTRACTOR

Fig. 360

When angles other than 90° and 45° are to be laid off, a protractor must be used because all angles are not obtainable with a square or bevel. The Starrett Universal Bevel Protractor is a graduated disc with a fixed blade and adjustable stock. Any given angle may be laid off or measured by setting the stock at that angle by the graduated disc. This tool has a very wide range of usefulness.

The blade is either 7 or 12 inches by  $\frac{1}{2}$  inch and the stock is 4 inches long; both are made from sheet steel nicely finished. The tool weighs 6 ounces. The disc is graduated in degrees from zero to 90° each way and rotates the entire circle on a center stud.

## Prices

The attachment shown in the small cut will be found convenient for grinding worm read tools, tapers on lathe centers, and all long tapers.

No. 360A.	7 inch.....	\$6.00

No. 360F.	Same in leather case.....	8.50
No. 360G.	Attachment, extra.....	1.00
No. 360B.	(7 inch in case) sent unless otherwise ordered.	

## DRAFTSMEN'S PROTRACTOR

Fig. 361

This protractor is made of sheet steel, nickel plated, graduated in degrees and figured to read from either right or left, with vernier to read in five minutes. The three straight edges of the protractor are graduated in inches and 16ths, the longer part, 8 inches. The tool will lie flat on the paper. By loosening the binding nut, friction is taken off, making it easy to adjust to degrees, when the tool may be again firmly locked.

This is a high grade protractor and one greatly appreciated by draftsmen.

No. 361A.	.....	\$6.50
No. 361B.	In leather case.....	7.75

## UNIVERSAL BEVEL PROTRACTOR WITH VERNIER AND ACUTE ANGLE ATTACHMENT

Fig. 364

This protractor is the same as No. 362, with the addition of the acute angle attachment, which enables the user to obtain very small angles.

## STARRETT TOOLS

## U. S. STANDARD SCREW PITCH GAUGE

Fig. 153

This gauge has 25 pitches, viz.: 2 1/4, 2 3/4, 2 1/2, 2 3/8, 2 1/2, 3, 3 1/4, 3 1/2, 4, 4 1/2, 5, 5 1/2, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 18, 20.

Also a center gauge with coarse and fine notch.

Price .....\$1.50

## WHITWORTH SCREW PITCH GAUGE

Fig. 7

Has the following pitches: 4, 4 1/2, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 18, 19, 20, 22, 24, 25, 26, 28, 30, 32, 40, 48, 60.

Price .....\$1.25

For Whitworth Standard Thread only.

## SCREW PITCH GAUGE

Fig. 4

Has the following pitches: 4, 4 1/2, 5, 5 1/2, 6, 7, 8, 9, 10, 11, 11 1/2, 12, 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, 30. The teeth are sharp and clean cut. Like our No. 40 it can be used inside of a nut as well as on outside of a screw or bolt. It is also a convenient and reliable tool to use as a 60-degree center gauge and gauge to test the grinding of either an inside or outside threading tool.

Price .....\$1.25

## IMPROVED SCREW PITCH GAUGE

Fig. 40

If not known, the pitch of a thread may be readily determined by comparison with the standards given on our improved screw pitch gauge. On the edge of the thin leaves there are teeth corresponding to standard thread sections and by placing leaves successively over the thread some one leaf will coincide, when the pitch of the thread can be read from the stamping on the leaf.

The gauge has 22 pitches, viz.: 9, 10, 11, 11 1/2, 12, 13, 14, 15, 16, 18, 20, 22, 24, 26, 27, 28, 30, 32, 34, 36, 38, 40.

Price .....\$1.00

## POSITIVE STOP THREAD GAUGE

Fig. 473

This gauge has a positive stop which holds the blade in a fixed and convenient position for use. It has 30 pitches from 6 to 60 inclusive, as follows: 6, 7, 8, 9, 10, 11, 11 1/2, 12, 13, 14, 15, 16, 18, 20, 22 in one end of the Case, 24, 26, 27, 28, 30, 32, 34, 36, 38, 40, 42, 48, 50, 56, 60 in the other. The number of pitch is stamped on the right side of each blade.

Price .....\$1.50

## THICKNESS GAUGE OR "FEELER"

Fig. 72

long, a convenient size to carry in the pocket.

Price .....\$1.50

## THICKNESS GAUGE

Fig. 172

Size A has nine leaves, viz.: .0015, .002, .003, .004, .006, .008, .010, .012 and .015.

Sizes B and C have eight leaves, the same as A with the omission of .0015.

The leaves are tempered and have the thickness marked upon them.

Size A is made with either straight leaves as shown, or with tapering leaves. Sent with straight leaves unless otherwise ordered.

No. 172A. Case 3 3/4 in. long by 1/2 in. wide;

leaves 3 1/16 in. long by 1/2 in. wide.....\$1.00

No. 172B. Case 4 3/4 in. long by 1/2 in. wide; leaves 4 1/2 in. long by 1/2 in. wide.....1.50

No. 172C. Case 6 1/4 in. long by 1/2 in. wide; leaves 6 in. long by 1/2 in. wide.....2.00

Set A will be sent unless otherwise ordered.

## FILLET OR RADIUS GAUGE

Fig. 272

This gauge affords means of obtaining the radii of fillets, corners, etc., as shown by the illustrations. Each blade is stamped with the radius in 64ths, the external being on one side and the internal on the other. It can be used in any position or at any angle, the formation allowing it to be used up to a shoulder, and for duplicating sample pieces. The studs holding blades in place are eccentric with the round end of case. This is of advantage as when the gauge is opened the edge of case stands well away from the edge of blades.

Size A has 16 blades, with radii from 1/32 to 17/64 in. inclusive, by 64ths

Size B has 16 blades, with radii from 9/32 to 33/64 in. inclusive, by 64ths

Prices

No. 272A. Each .....\$1.00  
No. 272B. Each .....1.50

## STARRETT TOOLS

## ENGINEERS' TAPER, WIRE AND THICKNESS GAUGE

Fig. 245

Especially designed for use by marine engineers, machinists and others desiring a set of gauges in compact form. The taper gauge shows the thickness in 64ths to 3/16ths of an inch on one side, and on the reverse side is graduated as a rule three inches of its length, reading in 8ths and 16ths of an inch.

The wire gauge, English Standard, shows on one side sizes numbered from 19 to 36, with two extra slots, one 1/16, the other 1/8 of an inch, and on the reverse side shows the decimal equivalents expressed in thousandths. This gauge has also 9 thickness or feeler gauge leaves, approximately 4 inches long, of the following thicknesses: .002, .003, .004, .006, .008, .010, .012, .015 and 1/16th of an inch, all folded within the case, which is 4 3/4 inches long, convenient to handle or to carry in the pocket.

Price, each .....\$4.00

## DEPTH GAUGE

Fig. 45

The wire in this gauge is held to a groove by a friction spring inside the nut while adjusting, and may be used close to the end, as well as in the middle of the straight edge.

By loosening the nut, the gauge may be neatly folded.

## Prices

No. 45A.	With 3 1/2 inch stock	.....\$0.75
No. 45B.	With 6 inch stock	.....1.15
No. 45C.	With 10 inch stock	.....1.35

Fig. 237 Price .....\$1.25

## DEPTH GAUGE

The head of this gauge is steel, nicely finished and case-hardened; 2 inches wide across the base, 1/4 inch thick.

The blade which is conveniently held in the groove of the head by a knurled lock nut, is a 6 inch narrow spring-tempered rule, and can be used separately from the gauge. Blades graduated in 32ds and 64ths of an inch will be sent unless otherwise ordered, but we can also supply them graduated in 50ths and 100ths, or 64ths and 100ths.

## PATENT INSPECTOR'S GAUGE

This gauge was designed at the suggestion of a government inspector to fill their need of a tool for measuring the thickness of ship plates, boiler plates, etc., where measure has to be taken through a bolt hole or hole drilled for the purpose.

The contact point is carried in beyond any burr formed by drilling, insuring correct measurement.

The slide measuring rod is graduated on two opposite sides, one side reading 32ds, the other 40ths. Reading from the top of the knurled friction slide, which, after the contact ends of the gauge are brought together against the thing being measured, is slipped down against the top, the graduations above it show the exact measure. Then the measuring rod may be instantly withdrawn, the hook part removed and all taken to the light and the correct measure indicated above the friction slide easily read.

The knurled nut over the split hub serves to contract same to fit close on the slide or to lock firm, making a solid gauge, convenient for any mechanic.

The gauge weighs about 1 ounce and is adapted for the vast pocket. Width, 1 inch. Capacity, 1 1/2 inch.

Price .....\$2.00

This gauge is similar to No. 30, but is made narrower for use in smaller holes. Width, 7/16 inch. Capacity, 1-13/16 inches.

Fig. 30

Fig. 31

Price .....\$3.00

## HUB GAUGE

Fig. 430

Used for measuring the length of pulley hubs, wagon wheel hubs, thickness of iron plate through holes, etc. The gauge will measure all lengths to 7 1/2 inches, and can be inserted through a 5/8 inch hole.

Price .....\$1.50

## PLANER AND SHAPER GAUGE

Fig. 246

The level in the base of the gauge is convenient for leveling pieces on the platen of a planer or the bed of a milling machine. Placing the square end of the level base against a finished point of work with which another point is required to be planed or milled to agree, the level used as a plumb will indicate when the position is right.

The gauge with extensions will give any height between 1/4 and 5 1/2 inches.

Price .....\$3.75

## TOOL MAKERS' STEEL CLAMPS

Made from drop forgings, nicely finished, case-hardened, and have take-up blocks to slip on and off end of screw, and are held to same in a novel manner. They will hold work square and parallel for laying out on surface plates, fitting or drilling.

A round piece may be rigidly held in two of the clamps and drilled on an upright, central and parallel. Put up and sold in pairs. With the small block in use, the capacity of the smaller clamp is a little over one inch, and that of the larger clamp two inches.

## Prices

1 inch	per pair	\$1.35

## STARRETT TOOLS

## IMPROVED SCRIBER

Fig. 67

Made for mechanics who want a better scriber than has been heretofore obtainable. Points are made of a fine grade of steel, nicely tempered. The knurled stock is of sufficient size to be easily held without cramping or turning in the fingers. The long, bent point will be found a valuable auxiliary for reaching through holes, etc. Length, with short, bent point, 9 inches; with long point, 12 inches. All parts are interchangeable. The knurled sleeve is nickled.

## Prices

Complete	\$0.50
Without long point	.35
Straight point or short bent point, each	.10
Long bent point	.15

The tool will be sent complete unless otherwise ordered.

Fig. 70

## POCKET SCRIBER

Made from steel tubing, knurled and nickel plated. The scriber is made from the best quality of steel, knurled and nickel plated. It is reversible, telescoping into the stock, and is held by a slight turn of the chuck so that it is always as safe to carry in the pocket as a penknife.

Mechanics find this a convenient tool to have always with them.

## Prices

No. 70A. Handle $\frac{1}{4}$ inch diameter, blade $2\frac{3}{4}$ inches long, weight 1 oz.	\$0.25
No. 70B. Handle $\frac{3}{8}$ inch diameter, blade $2\frac{3}{4}$ inches long, weight $1\frac{1}{2}$ oz.	.35

## IMPROVED MERCURY PLUMB BOBS

Fig. 87B

Fig. 87A

The improvement consists of the patented device for fastening the string without a knot to tie or untie, simply by drawing it into the peculiarly slotted neck at the top, after unwinding the required length, when the bob will hang perfectly true.

These plumb bobs are made from solid steel, bored and filled with mercury. Noteworthy features are their great weight in proportion to size, low center of gravity, small diameter, hardened and ground points, knurling on the body and the simple and effective device at top for fastening end of line after winding up. Nickel plated. Each is provided with a braided silk line.

## Prices

4 inches long, $\frac{1}{2}$ inch diameter, $2\frac{1}{2}$ oz.	\$1.00
5 inches long, $\frac{3}{8}$ inch diameter, 6 oz.	1.50
5 inches long, $\frac{7}{8}$ inch diameter, 12 oz.	2.00
6 inches long, 1 inch diameter, 16 oz.	2.50

## LITTLE GIANT JACK SCREWS

Fig. 190

Designed for tool-room use, for leveling up work on a planer-bed or under an upright drill, setting up machinery, etc. All parts are case hardened.

No. 190. The Jack (A) is  $\frac{1}{4}$  inch diameter at the base and has a range from  $2\frac{1}{4}$  to 3 inches. It will raise 1,000 pounds or more. Two extension bases (B and C) are made to fit the base of the main part (A) and are 2 and 1 inch high respectively. With these two extensions used singly or together a reach from  $2\frac{1}{4}$  to  $6\frac{1}{2}$  inches may be obtained.

An auxiliary pointed screw (D) is supplied to be used in place of the screw with the cap in certain places where it may be preferable. The base (E) is also provided, for use in cases where such a shape may be desirable.

## Prices

Jack (A)	\$0.75
Extension Base (B)	.20
Extension Base (C)	.15
Extension Base (E)	.15
Extra Screw (D)	.15
Jack, with all attachments	1.40

Sent complete (\$1.40) unless otherwise ordered.

## STEEL DRILL BLOCKS AND CLAMP

## Case Hardened

Fig. 271

These blocks are designed to be used singly or in pairs in connection with drill presses and for laying out work, prick punching, etc. The blocks may be used close together or separated and are kept in line by a spindle passing through friction bushings. They will be found convenient when holding pieces with shoulders, which may rest between the blocks. The blocks are  $1\frac{1}{4}$  inches square and will hold round pieces to  $1\frac{1}{4}$  inches diameter. The two grooves in each side take up the length and hold the clamp for small or large work.

## Prices

No. 271A. Two Drill Blocks	\$2.00
No. 271B. Clamp	.75
No. 271C. Set, complete	2.75

## DRILL BLOCKS AND CLAMP

Fig. 268B

The drill blocks are furnished in pairs. The size of each is 2 inches by  $1\frac{1}{2}$  inches.

The Clamp will hold a round piece up to  $1\frac{1}{4}$  inch diameter firmly in the groove of the Blocks, for prick punching, drilling or laying out a series of holes before and while being drilled.

No. 268A. Two Drill Blocks	\$1.00

No. 268C. Set, complete	1.50

Fig. 268A

## STARRETT TOOLS

## HIGH SPEED INDICATOR

Fig. 104

This indicator may be run at highest speed required without heating, and this on account of our frictionless bearing against which the inner end of the spindle revolves (a Starrett feature).

The working parts of this instrument are encased, and the dial plate has two rows of figures, reading right or left, as the shaft may run.

A late improvement in this indicator consists in the rotating disc, which, being carried by friction, may be moved to the starting point where the raised knobs coincide. When the spindle is placed in connection with the revolving shaft, pressing the raised knob with the thumb will prevent the disc from rotating, while the hand of the watch gets to the right position to take the time. By releasing the pressure the disc is liberated for counting the revolutions of the shaft when every 100 may be noted by feeling the knob pass under the thumb lightly pressed against it, thus relieving the eye which has only to look on the watch to note the time.

An important improvement which is now applied to all of our Speed Indicators, without extra charge, consists in adding to the hardened steel pointed spindle, rubber tips for both pointed and centered shafts, which not only remove the jar and run smoothly, but produce a stronger frictional contact between the shaft and the instrument. Nickel plated.

## Prices

In pasteboard box .....	\$1.00
In leather case .....	1.50

## IMPROVED STEEL INDICATOR

Fig. 106

A nicely made and finely working indicator. The working parts are inclosed like a watch, and as well made. The graduations show every revolution, and with two rows of figures read both right and left as the shaft may run. While looking at the watch each hundred revolutions may be counted by allowing the oval headed pin on the revolving disc to pass under the thumb as the instrument is pressed to its work.

This indicator is equipped with a rolling disc, as described above in our high speed indicator.

The instrument is nickel plated, and has a rubber tip on the end, so that it will not hurt the fingers when run at high speed.

Every indicator is warranted first-class.

## Prices

In pasteboard box .....	\$1.50
In leather case .....	2.00

## SURFACE GAUGES

Fig. 52

The sleeve and needle clasp, when loosened for adjustment, are both held by a slight spring friction, and by a single knurled nut both are rigidly clamped. For fine adjustment, the spindle in the base is raised or lowered by a knurled nut, and all backlash is taken up by a spiral spring in the base.

For above 12 inch lengths, an extension is provided to couple on to the spindle.

## Prices

No. 52A. 8 inch .....	\$2.00
No. 52B. 12 inch .....	2.75
No. 52C. 12 inch with 6 inch extension .....	3.25
Sleeve alone .....	.75

## MICROMETER SURFACE GAUGE

This gauge has a turned and polished base, a micrometer adjusting nut reading two thousandths, and a six inch extension for the spindle. By means of springs and taper fitting parts of the sleeve (not shown in cut) the scriber is held by slight friction in any position while adjustments are made and firmly held by a turn of the nut. A knurled cam on the base releases and locks the spindle for adjusting.

## STARRETT TOOLS

### YANKEE OUTSIDE AND INSIDE CALIPERS

Yankee Callipers and Dividers are manufactured under the Fay patent, are not quite so heavy as the Fay, and cost less. They are much liked, and on account of price are preferred by many to the higher cost tools.

All sizes are supplied with either solid or quick adjusting nut.

No. 73 represents a new Yankee Inside Transfer Caliper with either spring or solid nut. The bow is stiff, making the caliper reliable. After caliper inside of chambered cavity by springing in the legs they may be withdrawn, and as they spring back will show the exact size calipered.

#### Prices, No. 79 or No. 73

2½ inch, with solid nut...	\$0.65	With spring nut...	\$0.80
3 inch, with solid nut...	.70	With spring nut...	.85

### IMPROVED FIRM-JOINT CALIPERS

#### Prices

3 inch.....	\$0.40
4 inch.....	.50
5 inch.....	.55
6 inch.....	.65
8 inch.....	.80
10 inch.....	.90
12 inch.....	1.00
14 inch.....	1.50
16 inch.....	1.75
18 inch.....	2.10
20 inch.....	2.50
24 inch.....	3.00
30 inch, No. 26 only.....	5.00
36 inch, No. 26 only.....	6.00

The above sizes refer to the length of the calipers.

Their capacity is about one-third greater than the size given; for example, the 30 inch size will caliper 38 inch, and the 36 inch size will caliper 46 inch diameter.

The improvement in these calipers consists in the construction of the joint, which is so made as to be drawn together by means of a screw. The main stud is squared and fitted to one leg, thus preventing the stud from turning when loosening and tightening, and insuring a smooth and uniform friction of more or less tension to suit the user.

The quality of these calipers is incomparably superior to that of any old style riveted-joint caliper on the market.

No. 36

No. 37

These instruments may be used inside of chambered cavities, over flanges, etc., removed and replaced without losing the size calipered. This is done by loosening the nut binding one arm to the auxiliary leaf and swinging it out or in (while the joint is locked) to clear the obstruction, then moving it back against a stop where it will show the exact size measured.

The sizes given refer to the length of the calipers, but the outside ones will caliper a cylinder 20 per cent. larger than their length, and the inside calipers will open nearly twice their length.

## FIRM-JOINT HERMAPHRODITE CALIPERS

These calipers have an adjustable point, as well as the improved firm-joint. This joint, with its smooth and uniform friction, is incomparably superior to the old style riveted joint.

## STARRETT TOOLS

### UNIVERSAL DIVIDERS

Fig. 89

The adjustable scriber holder is reversible and carries either a fine tempered steel point or a pencil lead, held in a split socket by a knurled nut. With the holder turned outward it is possible to work close to shoulders, something that cannot be done by a similar tool of any other make; turned inward, points may be brought close together to scribe the smallest circle. With 4 inch beam  $7\frac{1}{2}$  inch and under may be scribed. An auxiliary beam 13 inches long is furnished, with which a 25 inch circle may be drawn. The V center point may be substituted for the regular point, adapting the tool for scribing around a drilled hole. We also furnish a pen attachment.

#### Prices

Tool with 4 inch beam and V center point.....\$1.75

F. Coupling.....		.35

Total for tool and all attachments.....\$4.00

Tool and V center point listing at \$1.75 sent unless otherwise ordered.

### PATENT DIVIDERS

Fig. 92

Bath points are crucible forged steel, nicely tempered. The quadrant passes through the leg and the clamp screw frictionally locks it firm. The screw threads have stock enough to last a lifetime. After fine adjustments are made, our patent lock nut between the arms locks the spring in the leg firm, curing the defect in the old style dividers of the points dodging out and in with the grain of the wood. The adjustable point may be instantly removed and a common pencil inserted in its place. The dividers are light yet rigid and pretty to handle, and are worth twice the price of the cheap malleable dividers now on the market.

#### Prices

Inches	6	7	8	9
Plain.....	\$0.85	\$0.90	\$1.00	\$1.15
Nickeled.....	1.10	1.15	1.25	1.40

Sent plain unless otherwise ordered.

### BALL POINTS

For Use With No. 51 and No. 59 Trammels

Fig. 88

When it is necessary to use a hole as center for dividers or trammels it is, of course, impossible to use an ordinary divider point. In such cases the Ball Point placed in the hole and bearing against the edges forms a seat for the divider leg in scribing circles or arcs around the hole. For very accurate work, however, the Ball Point is not recommended for it is impossible to keep the center exactly.

This set consists of four balls, 1-9-16 inch, 1 inch,  $\frac{3}{4}$  inch and  $\frac{1}{2}$  inch diameter, respectively.

In ordering this set for use with trammels, please give tool number of the trammel so that the proper holder may be sent.

#### Prices

Complete, 4 balls and holder.....	\$1.25
Either ball or holder.....	.25

### EXTENSION BEAM TRAMMELS

Fig. 51. Nickel Plated

This cut represents a pair of Trammel Heads, with an opening through the under side to accommodate the extension, giving width and stiffness in proportion to the length required for large work, while it is equally well adapted to receive a narrow beam for light work.

The points are eccentric, and may be loosened and rotated in their sockets to make fine adjustments. Either point may be removed and a common pencil inserted.

#### Prices

No. 51A. Complete.....	\$3.25
No. 51B. Without caliper legs.....	2.50

Sent complete (No. 51A) unless otherwise ordered.

### NEW TRAMMELS

Fig. 59A

This cut shows the Trammels fastened to a wooden beam, which may be any size from  $\frac{3}{4}$  inch to 1 $\frac{1}{2}$  inches wide, and of any thickness desired (requiring no fitting), giving stiffness according to the length and adapting it for small or large work.

The auxiliaries designed to go with the trammel heads are as shown above, viz., inside and outside caliper legs, an extra pair of long points, a set of four ball points with holder, which enable one to scribe a circle from the center of any hole up to 1 $\frac{1}{2}$  inches and under. A lead pencil may be used in place of either of the steel points. The clamping device is adapted to take in either a small or common sized pencil. The Trammels are furnished with or without auxiliaries.

The small engraving to the left gives a more detailed representation of one of the heads.

#### Prices

Trammel Heads with one pair of points (No. 59A) will be sent unless otherwise ordered.

Fig. 59 B

## STARRETT TOOLS

## ADJUSTABLE BENCH LEVELS

With ground and graduated vials—accurate and very sensitive.

These levels are so constructed that they can be accurately adjusted, and when so adjusted are not liable to get out of truth, the vials being set in tubes having solid ends which are firmly clamped to the base. The tubes are nickel plated, the bases japanned or nickel plated. The outer tube may be turned so as to protect the glass when not in use. These levels have longitudinal grooves.

The bottoms of these levels are all ground true.

## MEASURING BAR CLAMPS

Fig. 69

These clamps are one inch square inside, and are to be used with two wooden bars about 1x½ inch of any desired length. The clamps and bars thus combined will be found very convenient by carpenters as adjustable measuring rods, as well as for extension beams for the No. 59 Trammels, Nickel plated.

Price, per pair.....\$0.75

## ELECTRICIANS' POCKET SCREWDRIVER

The handle of this screwdriver is covered with hard rubber for insulation from electrical currents, and is nicely ribbed so as to insure a firm grip when using the tool.

Price, complete.....\$1.50

Extra Blades.....each .10

Fig. 560

## AUTOMATIC ADJUSTABLE-STROKE CENTER PUNCH

Fig. 18

The ordinary hammer and center punch are not sufficiently accurate when laying out fine work. They require the use of both hands and the accuracy of the blow depends upon the skill of the mechanic.

The center punch shown here (patent applied for) contains a mechanism which automatically strikes a blow of any required force when the punch is in the exact position desired by the operator. It is provided with a knurled adjustable screw cap, which, working in connection with a spring, regulates the stroke. For work requiring a heavy mark, turn cap down; for work requiring a light mark, turn it up. To use it, no hammer is needed. The punch being placed in an upright position over the working line, a downward pressure releases the striking block and makes the impression without danger of slipping, as is liable when a hammer is used. When adjusted for either light or heavy stroke, all indentations are of a uniform size for the starting of the drill, etc., and accurate and quicker work can be done. The working parts are hardened, durable and accessible for such repairs as may ever be needed. The adjustable cap fits the hand, with no stroke adjusting screw through and above it to bother. The point can be removed for regrinding and easily replaced. The AA size is 3¼ inches long when adjusted for medium stroke, ¾ inch diameter and weighs one ounce. The A size is 5 inches long when adjusted for a medium stroke, ¾ inch in diameter and weighs 3 ounces. The B size is 6 inches long when adjusted for a medium stroke, ¾ inch in diameter and weighs 4 ounces. It differs from the other sizes in being larger and capable of striking a much heavier blow.

## Prices

No. 18AA.....	\$1.50	No. 18B.....	\$2.50

Each.....	.20
Per dozen, assorted A, B and C, in round wooden box.....	2.15
Sent in round box only when so ordered.....	

## SPACING CENTER PUNCH

Starrett's Combination Prick Punch and Spacing Tool is just the thing for laying off work quickly and accurately—for drilling, cutting out dies, etc. The prick punch is solid—made from best tool steel, properly tempered. The guide point is set in a socket with a spiral spring to press it down. When the punch is struck, the guide presses back into its socket, permitting the punch to be held straight over its work, and insuring accurate results. The screw with check nuts sets the spacer right for small or large drill, and has a variation from 5/64 inch to ¾ inch.

Price.....\$0.75

## PATENT NAIL HOLDER AND SET

Fig. 119

This cut shows our Nail Holder and Set combined. The nail may be instantly placed under the spring in the lower end of the holder and there retained by the pressure of same, ready to be driven home. After one blow is struck, the holder is withdrawn and the nail driven in and sunk with the punch—a great improvement over the difficult way of trying to hold a small nail between the thumb and finger at the risk of pounding them. The holder also admits of the nail being held to drive in places where the hand cannot go.

Price, each.....\$0.25

24 inch, as in bottom cut.....	2.25

## ENGINEERS' AND PLUMBERS' LEVEL

Fig. 133

The above represents an adjustable, incline level, a fixed level, and a plumb. The hinged tube inside the working faces of the frame, carrying a level glass, is adjustable to the graduated scale, and shows any incline by 32ds (or less) to 2 inches to the foot without interfering in the least with the plumb or level.

A longitudinal groove in seat of frame (not shown in cut) adapts it to rest on a cylindrical shaft or pipe as well as on flat surfaces, making it convenient to determine the pitch of drain pipes, etc.

These instruments are supplied with either ground or plain glasses.

### Prices

No. 133A.	10 inch with plain glasses.....	\$2.75
No. 133B.	15 inch with plain glasses.....	3.00
No. 133C.	10 inch with ground glasses.....	5.75
No. 133D.	15 inch with ground glasses.....	6.00

Size A will be sent unless otherwise ordered.

## TOOL MAKERS' STEEL CLAMPS

Fig. 160

These clamps are made from drop forgings, nicely finished, case hardened, and have take-up blocks to slip on and off end of screw, and are held to same in a novel manner. They will hold work square and parallel for laying out on surface plates, fitting or drilling. A round piece may be rigidly held in two of the clamps and drilled on an upright, central and parallel. Put up and sold in pairs. With the small block in use, the capacity of the smaller clamp is a little over one inch, and that of the larger clamp two inches. Has hole in block to insert screw, so that block may be fastened to bench, and used as a small vise.

### Prices

1 inch.....	per pair	\$2.00
2 inch.....	per pair	2.50

## SETS OF TOOLS

Fig. 901

In nicely finished wooden case. Size of case, 12 inches x 7 inches x 1 1/2 inches.

Set No. 901 consists of the wooden case and the following tools:

No. 11.	6 inch Combination Square, complete.
No. 321.	6 inch Flexible Steel Rule in pocket case.
No. 117B.	Center Punch.
No. 390.	Center Gage.
No. 77.	5 inch Divider with solid nut.
No. 79.	6 inch Outside Caliper with solid nut.
No. 73.	6 inch Inside Caliper with solid nut.

### Price

Set, complete.....\$6.15

## FIRM DOUBLE JOINT CALIPERS FOR BLACKSMITHS

These callipers are well made, have perfect joints and a long handle to enable the user to grip with comfort hot forgings—the long arm to be used for the greater and the short one for the smaller or finished size. The difference in the length of arms prevents using the wrong caliper when there is but slight variation in the work measured. The caliper is 22 inches in length over all and has a 6-inch caliper on one side and a 12-inch caliper on the other side.

Fig. 173

### Price

Each .....\$2.00

## STARRETT TOOLS

## LEVELING INSTRUMENT

Fig. 101

Designed for the use of architects, contractors, carpenters, millwrights, masons, surveyors, etc.

Its lightness, simple construction, and extremely moderate price, combined with the wide range of work to which it can be applied, make it very desirable for all who have occasion to use such an instrument.

The tripod is of iron, and has improved extension legs. The upper parts are hollow, to receive within them the lower parts, which may be held at any desired length by clamp screws.

The upper plate is connected to the tripod head by a ball and socket joint, and can be leveled by the leveling screws. This plate is recessed to contain a graduated arc below its upper surface, and has a center stud on which the arc and level turn. The graduated arc is of steel, and has on it one half of a circumference divided to degrees and properly numbered. This arc turns on the center stud of the upper plate, independent of the level or sight tube.

The sight tube is a brass tube twelve inches long, and in one end is a small eye aperture, while the other end has the usual cross wires.

With extension legs, the height can be from two feet six inches to four feet six inches. The sight tube, level case, and graduated arcs are nickel plated, the other parts are japanned.

The advantages of this instrument are as follows: The head is held to the tripod with a bolt and nut, so as to make it stationary at any given point; the graduated arc can be clamped to the base plate by throwing a small cam arrangement.

Weight packed in box for shipment, 13½ pounds.

## Prices

- No. 101A. Japanned, nickeled tube.....\$12.50  
No. 101B. Japanned, nickeled tube with ground vial in level..... 14.00

No. 101A will be sent when style is not specified.  
A special circular of this instrument will be sent on request.

## ELECTRICIAN'S LEVEL

## Un-Magnetic

This level is especially designed for use about electrical works, setting up electrical engines, dynamos, etc., or in any place where an iron or steel level is liable to be magnetized.

The base is made of bronze, is un-magnetic and has concave groove in the bottom, running through the center full length, adapting it to rest on a shaft or pipe as well as on a flat surface.

Fig. 197

## TRANSIT

Fig. 99

To meet the demands of contractors, builders, carpenters, farmers, and others for a transit and level, low in price yet sufficiently accurate for their needs, we offer the Starrett transit and level. These instruments are very simple; they do not have the expensive attachments found on engineers' instruments. The builder and contractor find them indispensable in laying out building lots, locating batter boards, leveling foundation walls, and in pouring concrete floors.

## Prices

- No. 99A. With plain sight tube and short legs.....\$15.00  
No. 99B. With plain sight tube and long legs..... 16.50

Target to go on common ten-foot pole, extra..... 1.50  
No. 99F will be sent when style is not specified.  
A special circular of this instrument will be sent on request.

## PIN VISES

These vises have hardened jaws with chucks so made that they will hold firmly anything inserted in them. The hole extends through full length of the handle. The handle is reduced in size, so that it may be more rapidly rotated between thumb and finger when filing small work. They are convenient handles for holding scribers, small files, etc. Nickel plated.

## DRAFTSMEN'S SCALES, PATENTED

Fig. 405

This scale has tilting studs, so placed that each of its four corners, with different graduations, will come in contact with the paper by its own weight when resting on the studs, with the back edge raised at an angle of about 30°. The scales are graduated on each of their four corners in parts of inches as follows:

- No. 405. 10ths, 40ths, 50ths, 100ths.  
No. 405A. 8ths, 16ths, 32ds, 64ths.

## Prices

## STARRETT TOOLS

## TIME SAVER DRILL, TAP, AND STEEL WIRE GAUGE

By use of this gauge, one is enabled to select at once the right sized drill to suit machine screw tap most commonly used, leaving just stock enough for the tap to cut as near a full thread as is practicable for one tap without breaking it, thus saving much time and uncertainty of result attending the former crude ways of making a selection.

Explaining the chart, the first row of figures, for an example, read thus, 14x20 10  $\frac{1}{4}$ . The number 14 (in the first row of figures) means the number or size of tap; 20 the pitch or size of thread; 10 the size of drill to use which will leave the right stock for proper thread; and  $\frac{1}{4}$ , size of drill to use to let this tap or screw through outside of the thread.

The figures—1, etc., up to 60—designate the number of drill (size agreeing with the holes). Other figures, 228, 221, etc., designate the size of hole in thousandths of an inch.

Price .....\$1.75

Fig. 185

## DRILL AND STEEL WIRE GAUGE

This gauge gives the number of drill to fit each hole, and the size of the hole in thousandths of an inch.

Price, No. 186.....\$1.50

## JOBBER'S DRILL GAUGE

For Gauging Twist Drills

This gauge shows sizes from 1/16 inch to  $\frac{1}{2}$  inch, varying by 64ths. Each size is designated by both common and decimal fractions. The gauge is hardened and tempered and the holes standard.

# BUILDERS', ARCHITECTS' AND SURVEYORS' INSTRUMENTS

Fig. 5160

Engineers' R. R. Transit

Fig. 5129

Builders' Transit

Fig. 5110

Builders' or Architects' Level

No. 5160, Engineers' Railroad Transit (for repeating angles) achromatic terrestrial telescope  $11\frac{1}{2}$  inch, with dust cap and sun shade, fine spirit level to telescope, graduated on the glass. Object glass  $1\frac{1}{2}$  inch with improved rack movement, eyepiece with patent micrometer focusing arrangement with lock out. Clamp and tangent screw of improved pattern with counter-spring. Compass with silvered raised ring, graduated to half-degrees, with variation plate set by capstan-head pinion. Needle about 5 inch. Vertical limb 5 inch diameter, graduated on solid silver to half-degrees with vernier reading to one minute. Horizontal limb  $6\frac{1}{2}$  inch graduated on solid silver to half-degrees reading to one minute by two opposite verniers placed at about  $30^\circ$  with telescope. Two spirit levels to horizontal limb, graduated on the glass. Improved tangent screws with counter-spring. Long centres. Four leveling screws; leveling arms adjustable for wear. Shifting centre.

Instrument complete, with plumb bob, reading glass, adjusting pins, waterproof cover, etc., packed in polished mahogany box with split tripod. \$175.00

## BUILDERS' TRANSIT WITH COMPASS

No. 5129, Builders' Transit with vertical limb,  $3\frac{1}{2}$  inch diameter, graduated to degrees, reading to five minutes. Instrument complete, with tripod, etc. \$110.00  
Vertical Limb reading to one minute, extra. 5.00  
Patent Extension Tripod in place of regular tripod, extra. 6.00

## BUILDERS' OR ARCHITECTS' Y LEVEL

Builders' or Architects' Y Level, achromatic terrestrial telescope 11 inch with dust shade and cross-hairs, spirit level graduated on the glass, object-glass  $1\frac{1}{2}$  inch with rack-movement, eye piece adjustable to focus the cross-hairs. The Y's have patent locking arrangement dispensing with the pin bolts. Horizontal circle 3 inch graduated to degrees, with vernier reading to 5 minutes. A most serviceable and compact instrument.

No. 5110, Builders' or Architects' Y Level, complete, with metal trivet, plumb bob and adjusting pins, in polished mahogany box with hardwood tripod. \$45.00  
No. 5111, Builders' or Architects' Y Level, like No. 5110, but with improved tangent screw with counter-spring. 50.00

6	7.00
7	8.50
8	11.00
10	15.00
12	17.00

### GANG PLANER TOOL

As each chip is comparatively light, a planer will, with this tool, carry with ease a feed and depth of cut much greater than is possible when using an ordinary tool, and there is much less tendency to "break out" at the end of cut. On large surfaces, this tool has reduced time 50 to 75 per cent.

The illustration shows plan of cut made by Gang Planer Tool with feed set to 1/4 inch, distributing the cut so that each cutter takes but 1/8 inch.

Price includes one set of self-hardening steel cutters, gauge for grinding cutters, and wrench.

Fig. 519A

Fig. 519B

No.	Size Shank inches	Size Cutter inches	Feed Ad Justment inches	Complete	Extra Cutters each

17	2 x 2 3/4	1 3/4	2	4.50	.65

### PLANER TOOL

Fig. 519C

Pat. May 28, 1901.

Works at Any Angle, Right or Left Hand. Equals a Complete Set of Forged Planer Tools

Price includes a drop forged wrench and two self-hardening steel cutters.

No.	Size Shank inches	Length inches	Size Cutter inches	Complete	Extra Cutters each
40	1 1/2 x 1	6	1/4 x 3/8	\$3.10	\$0.45
401	5/8 x 1 1/4	8	1/4 x 1/2	4.00	.65

45	2 1/4 x 2 3/4	20	7/8 x 1 1/4	30.00	8.50

### BORING TOOL

Fig. 519D

This is a stiff, handy tool and can be used on any lathe without fitting. Effectively equal to a dozen forged tools.

Price includes straight and 45° end caps, two cutters and wrench.

No.	Size Shank inches	Flam. Bar inches	Size Cutter in. sq.	Complete	Extra Cutters each
00B	1/2 x 5/8	1/2	3/8	\$3.25	\$0.25
8	3/4 x 3/4	1/2	1/2	3.25	.25
9	1/2 x 1	3/4	3/4	3.85	.30
10	5/8 x 1 1/4	1	1/2	5.10	.45
11	3/4 x 1 1/2	1 1/8	3/4	7.25	.65
12	1 1/8 x 1 3/4	1 1/2	1	10.75	.90
13	1 x 1 3/4	1 1/2	1 1/2	15.00	1.20

SPECIAL DIAMETERS OR LENGTHS FURNISHED TO ORDER. FOR CHUCKS FOR ABOVE  
DRILLS, SEE INDEX  
FOR DECIMAL EQUIVALENTS, SEE INDEX

## DRILLS FOR BLACKSMITHS' DRILL PRESSES

Fig. 506A

High Speed Drills with  $\frac{1}{2}$  inch shanks will be furnished in sizes over  $\frac{3}{4}$  inch diameter only at customer's risk, as we do not consider the shanks strong enough.

Unless otherwise specified these drills will always be furnished with flatted shanks.

Shanks  $\frac{1}{2}$  Inch Diameter and  $2\frac{1}{4}$  Inches Long

Diameter inches	Price each		Length Over All inches
	Carbon Steel	High Speed	
$\frac{1}{8}$	\$0.45	....	$4\frac{7}{8}$
$\frac{3}{16}$	.45	....	$4\frac{7}{8}$
$\frac{1}{4}$	.50	....	$5\frac{5}{8}$
$\frac{5}{16}$	.55	....	$5\frac{5}{8}$
$\frac{3}{8}$	.60	\$1.10	6
$\frac{7}{16}$	.65	1.20	6
$\frac{1}{2}$	.70	1.30	6
$\frac{9}{16}$	.75	1.40	6

$\frac{1}{2}$	9.25	.77	$6\frac{1}{4}$	$1\frac{1}{8}$	45.00	3.75	$7\frac{1}{2}$
$\frac{1}{2}$	10.50	.87	$6\frac{1}{2}$	$1\frac{1}{4}$	48.00	4.00	$7\frac{1}{2}$

These Bit Stock Drills fit any brace on the market and will drill steel, iron or other metals as well as wood. They are not injured by contact with screws or nails, and will bore straight any kind of wood without splitting it.

## TAPER SQUARE SHANK RATCHET DRILLS

Fig. 504D

No. 1 Shanks— $\frac{3}{8}$  inch by  $\frac{5}{8}$  inch by  $1\frac{1}{2}$  inches long. No. 2 Shanks— $\frac{1}{2}$  inch by  $\frac{3}{4}$  inch by  $1\frac{3}{4}$  inches long. Unless otherwise specified No. 1 Shank will be furnished, except on High Speed Drills over 1 inch, which will be equipped with No. 2 Shank.

To avoid mistakes in ordering specify figure number and dimensions of shank.

## DRILLS IN SETS

Fig. 80

## No. 80 SET

This set comprises all the sizes of straight shank drills, steel wire gauge, from No. 1 to 60, inclusive. The size drill fitting each hole is plainly marked on the stand. As even numbers are placed on one side and odd on the other, selection is made easy.

## PRICES

Stand with drills, complete.....\$0.75 Stand only.....\$1.00

These stands are of a peculiar composition metal, admirably adapted for the purpose and will not rust. The finish is in oxidized copper, making a very beautiful and lasting effect. They are especially useful in tool rooms and on mechanics' benches.

## No. 50 SET

This set comprises all the sizes of Jobbers' straight shank drills from  $\frac{1}{16}$  inch to  $\frac{1}{2}$  inch, inclusive, by 64ths. Each drill fits in a hole plainly marked with its size.

As all the 32nd sizes are on one side and the 64th sizes on the opposite side, selection is made easy.

## PRICES

Stand with drills, complete.....\$11.50 Stand only.....\$1.00

Fig. 50

## No. 14B SET

This set consists of the following sizes Bit Stock Drills:

$\frac{1}{8}$ ,  $\frac{3}{16}$ ,  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$  inch.

The flat case that goes with this set is covered with a strong leatherette, green in color, gold embossed.

Size,  $7 \times 3 \frac{1}{2} \times \frac{3}{4}$  inches.

Price complete, \$2.65

Fig. 14B

## No. 13 SET

This set consists of the following sizes Bit Stock Drills:

$\frac{1}{16}$ ,  $\frac{3}{32}$ ,  $\frac{1}{8}$ ,  $\frac{5}{32}$ ,  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$ ,  $\frac{7}{8}$ ,  $\frac{1}{2}$  inch.

They are contained in a handsome hardwood box,  $2 \frac{1}{2}$  inches in diameter and 6  $\frac{1}{2}$  inches long.

Price complete, \$2.75

Shanks for sizes 2 and  $2\frac{1}{2}$  inches are 1 inch by  $\frac{3}{4}$  inch, and 2 inches long.

MUD PLUG OR WASHOUT TAPS  
For Washout Holes in Locomotives

Fig. 4991	No. 1. $1\frac{3}{4}$ to $2\frac{1}{8}$	each \$6.00
Fig. 4992	No. 2. $2\frac{1}{8}$ to $2\frac{3}{8}$	7.50
Fig. 4493	No. 3. $2\frac{3}{8}$ to $2\frac{1}{2}$	9.00
Fig. 4994	No. 4. $2\frac{1}{2}$ to 3	10.50

These Taps will be furnished with "V" form thread, 12 to the inch unless otherwise ordered.

PATCH BOLT TAPS  
12 "V" Threads per Inch

We can furnish the above threads in "V" and United States Standard Shapes.

Unless advised to the contrary, we fill orders with "V" form and in threads as indicated in heavy type.

We also can furnish  $\frac{1}{16}$  and  $\frac{1}{8}$  oversize, up to  $\frac{3}{4}$  inch, and  $\frac{1}{2}$  oversize, up to  $1\frac{1}{2}$  inch.

In ordering, always state exact diameter and thread wanted.

## KEYSTONE REVERSIBLE RATCHET

### Combination No. 200

Consists of Morse Taper Ratchet for Twist Drills, Sleeve for Square Shank Drills, and Short Boiler Socket for Square Shank Drills. Sockets interchangeable.

The Bore of Socket for 10 inch Ratchet is No. 2, Taper taking Drills up to  $\frac{3}{8}$  of an inch.

The Bore of Socket for 14 and 16 inch Ratchet is No. 3, Taper taking Drills up to  $1\frac{1}{4}$  inches.

The Bore of Socket for 18 to 28 inch Ratchet is No. 4, Taper taking Drills up to 2 inches.

The Socket for 10-inch Ratchet takes No. 1 Morse Taper Sleeve.

The Socket for 14 and 16-inch Ratchet takes No. 2 Morse Taper Sleeve.

The Socket for 18 and 28-inch Ratchet takes No. 3 Morse Taper Sleeve.

No. 51. Combination complete with 10 inch handle ..... \$ 7.75

No. 52. Combination complete with 14 inch handle ..... 9.00

No. 53. Combination complete with 16 inch handle ..... 10.00

No. 54. Combination complete with 18 inch handle ..... 11.25

No. 55. Combination complete with 22 inch handle ..... 11.25

No. 56. Combination complete with 24 inch handle ..... 11.75

No. 57. Combination complete with 28 inch handle ..... 12.25

## RENSHAW'S RATCHET DRILLS

These Ratchets are made to take the taper shank and also the ordinary square shank drills. By transferring the collet and feed-screw, as arranged for right-hand drilling, to opposite ends of the spindle, the ratchet may be used for left-hand drilling.

No. 1. Length of handles over all,  $9\frac{1}{2}$  inches; length from top of spindle to bottom of feed collet, 3 inches; length of feed,  $1\frac{1}{2}$  inches.

No. 3. Length of handles over all 18 inches; length from top of spindle to bottom of feed collet, 5 inches; length of feed,  $2\frac{1}{2}$  inches.

No. 1 has one collet for drills with bit stocks, and one collet for drills fitting No. 1 Morse's Standard Taper Socket.

Price ..... \$11.00

Less for either collet, if not wanted ..... 1.60

..... 15.00

No. 3 and No. 5 collets are held in the spindle by screw-thread. No. 1 and No. 2 collets are tapered externally to fit No. 3 socket.

Less for collets Nos. 1 and 2 ..... each \$1.10

Less for collets Nos. 3 and 5 ..... " 1.75

..... 15.00

The No. 3 ratchet, for use of boiler-makers, for whose use it is especially adapted, is provided with an extended feed-screw, having a knurled shank  $3\frac{1}{4}$  inches long, by which the ratchet may be held by hand in starting the drill, and fed by hand also. When this extended screw is substituted for the regular one the price is the same; if it is taken as an extra attachment, it is furnished at..... \$3.50

Adjustable friction feed attachment..... extra 4.00

Keystone No. 200

Fig. 502C

No. 3 has one collet, No. 5, for drills with square shank of  $\frac{1}{2}$  to  $1\frac{1}{2}$  inches diameter, and collets Nos. 1, 2 and 3 for Morse's Standard Taper Shanks. No. 3 and No. 5 collets are held in the spindle by screw-thread. No. 1 and No. 2 collets are tapered externally to fit No. 3 socket.

Less for collets Nos. 1 and 2 ..... each \$1.10

Less for collets Nos. 3 and 5 ..... " 1.75

..... 15.00

The No. 3 ratchet, for use of boiler-makers, for whose use it is especially adapted, is provided with an extended feed-screw, having a knurled shank  $3\frac{1}{4}$  inches long, by which the ratchet may be held by hand in starting the drill, and fed by hand also. When this extended screw is substituted for the regular one the price is the same; if it is taken as an extra attachment, it is furnished at..... \$3.50

Adjustable friction feed attachment..... extra 4.00

## RATCHETS—BENCH SHEARS

## KEYSTONE REVERSIBLE

A represents ratchet adjusted, with socket for square shanks. B, boiler makers' socket. C, Morse taper socket. D, square shank sleeve. E, cap for securing socket in holder. F, knob for reversing movement. No drift required for discharging Morse taper drill or sleeve.

## SLEEVE RATCHETS

- No. 1. 10 in. handle, for Square shanks, \$5.00; for Morse Taper.....\$5.25  
 No. 2. 14 in. handle, for Square Shanks, 5.75; for Morse Taper..... 6.00  
 No. 3. 16 in. handle, for Square Shanks, \$6.50; for Morse Taper..... 6.75  
 No. 4. 18-22 in. handle, for Square Shanks, \$7.25; for Morse Taper..... 7.50  
 No. 4. 24 in. handle, for Square Shanks. 7.75  
 for Morse Taper 8.00  
 No. 4. 28 in. handle, for Square Shanks. 8.25  
 for Morse Taper..... 8.50

## RATCHET No. 4

Complete, with one Spindle only.....\$12.00

This Ratchet is designed for ordinary work, and is guaranteed for drilling holes up to one inch in diameter. Length, 14 inches. Weight, 4 1/4 lbs.

Extra Spindles for No. 4 ratchet, each.....\$2.40

Style M Spindle, taking No. 1 square taper shank drills with shank 3/8-inch square on small end.

Style B Spindle, taking No. 2 square taper shank drills with shank 1/2 inch square on small end.

Style K Spindle, taking drills with No. 2 Morse taper shanks, up to 3/8 in. diameter.

## RATCHET No. 6

Complete, with one Spindle only.....\$18.00

This Ratchet is designed for very heavy work, being guaranteed to drill holes up to two inches in diameter. Length, 18 inches. Weight, 10 1/2 lbs.

Extra Spindles for No. 6 ratchet..... each \$3.60

Style C Spindle, taking No. 1 square taper shank drills with shank 3/8 inch square on small end.

Style F Spindle, taking No. 2 square taper shank drills with shank 1/2 inch square on small end.

Style N Spindle, taking drills with No. 3 Morse taper shanks, up to 1 1/4 inch diameter.

Style S Spindle, taking drills with No. 4 Morse taper shanks, up to 2 inch diameter.

NOTE—Regular Morse Taper Reducing Sleeves can be used in K, N, and Spindles.

When ordering be careful to specify style spindle wanted. Unless otherwise specified we will ship No. 4 Ratchet equipped with M Spindle and No. 6 equipped with C Spindle.

33	Elbow Bench	7 1/2	46	14	48	25.00

FOR TINNERS' SNIPS AND CRIMPING MACHINES, SEE INDEX

## BEAVER EASY-WORKING DIE STOCKS

Beaver Die Stocks use narrow receding chasers—hence are "Easy Workers." Every tool is adjustable and threads four or more sizes of pipe. No dies to change. A self centering chuck does away with the bother of extra bushings. Tools are made from the finest quality of material and are absolutely guaranteed.

No. 6. Beaverette

### No. 6 "BEAVERETTE" $\frac{1}{4}$ to $\frac{3}{4}$ Inch

The Beaverette uses two sets of non-receding dies which are instantly adjusted to thread  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$  or  $\frac{3}{4}$  inches pipe by a slight movement of the adjusting handle. The tool is simple, strong, does perfect work and is self-contained. No extra dies or bushings. When desired we can furnish special sets of  $\frac{1}{8}$  inch dies to go with the "Beaverette."

Threads pipe,  $\frac{1}{4}$ ,  $\frac{3}{8}$ ,  $\frac{1}{2}$ ,  $\frac{3}{4}$  inches.

Price complete .....each \$15.00  
Price extra Dies,  $\frac{1}{8}$ ,  $\frac{1}{4}$  and  $\frac{3}{8}$ , or  $\frac{1}{2}$  and  $\frac{3}{4}$  inch R. or L. ....per set 3.00

No. 25. Plain  
1,  $1\frac{1}{4}$ ,  $1\frac{1}{2}$ , and 2 inch

Numbers 25 and 26 thread 1,  $1\frac{1}{4}$ ,  $1\frac{1}{2}$  and 2 inch without changing dies. The tools are similar in construction with the exception that the No. 26 is designed for ratchet operation and for use in confined quarters, in ditches, etc. Other ways the tools are identical. One set of dies cuts four sizes. Adjustment from one size to the other can be made in 5 seconds by shifting control lever. No slipping—the action is positive. A universal chuck centers the pipe, eliminating bushings. Tools are made of the highest quality of steel and malleable iron and will withstand more than the usual amount of abuse. "Beaver" Tools are absolutely guaranteed.

### SIZES CHANGED INSTANTLY

No. 41. Beaver ( $2\frac{1}{2}$  to 4 inch)  
No. 61. Beaver ( $2\frac{1}{2}$  to 6 inch)  
No. 80. Beaver ( $4\frac{1}{2}$  to 8 inch)  
No. 90. Beaver (9 to 12 inch)

These large "Beaver" Tools are self-contained. Strong construction. Will withstand hardest field use. Large tools are similar to the No. 41 herewith illustrated and have the same advantages. Two sets of dies are contained in the stock and are both controlled by same lever. One man threads steel or wrought iron pipe up to 12 inches perfectly. Every "Beaver" tool guaranteed.

## BEAVER SQUARE-END PIPE CUTTERS

No. 5 "Beaver" cuts  $\frac{1}{2}$ ,  $\frac{3}{4}$ , 1,  $1\frac{1}{4}$ ,  $1\frac{1}{2}$  and 2 inch

Beaver Square-End Pipe Cutters cut pipe off absolutely square and smooth by means of two specially designed cutting knives automatically fed by powerful coiled springs. Saves reaming and filing to remove burrs. Cannot split the pipe. No. 10 and 15 are ratchet operated. One man cuts any size easily.

## OSTER STOCKS AND DIES FOR HAND OPERATION

Fig. 201  
Front View

Figs. 204 and 206

Figs. 16 and 17  
From the FrontFigs. 16 and 17  
From the SideOSTER PIPE MACHINES  
For Hand Operation

These machines are complete with a self-centering pipe vise. By the movement of the top vise wheel, the pipe is brought central with the dies, assuring straight threads without further attention on the part of the operator. No previous experience is required in cutting a straight and perfect thread in this machine. The dies are opened or closed by the movement of the small lever handle, which you will notice on the top at the front of the machine. By throwing this lever handle the pipe can be removed, without turning back over the finished threads.

No.	Sizes R. Hand inches	Sets of Dies	Price Without Tripod	Extra Dies per Set	Price Tripod Stand
201	1/4 to 2	4	\$ 94.50	\$4.50	\$10.50
204	1 to 4	4	210.00	6.00	15.00
206	1 to 6	6	337.00	7.50	37.50

OSTER GEARED DIE-STOCKS  
With Adjustable Centering Chuck

One set of dies threads two sizes of pipe. To change dies simply move the setting plate to the left as far as it will go. The dies can then be inserted or removed through the die-head without removing any part of the machine.

These are portable pipe tools which can be used as a Die-Stock; as a Bench tool; or complete with Tripod Stand. Each tool is strictly a one-man outfit.

These tools have no leading screw; the dies are started with a lever handle. One movement of the lever brings the head to position for the next cut without backing over the finished threads. No pipe vise required.

## OSTER BULLDOG DIE-STOCKS

Every Bulldog Tool has the 5 BIG OSTER FEATURES—(1), self-locking, quick-opening, adjustable dies; (2), self-locking, quick-opening, self-centering guides; (3), three-lever control; (4), no loose bushings or breakable small parts; (5), no running back over newly-cut threads. Built for perfect lubrication and long service.

Bulldog No. 82, 1/4 to 3/4 inch, the "baby" of the line, is entirely self-contained. One set of double-end protected dies thread all four sizes. No loose parts.

Bulldog Ratchet Die-Stocks No. 102R to 105 1/2 R, in addition to all features of above tool, have the easy-pulling ratchet.

Nos. 105 to 107 1/2, operated with four handles. Nos. 107R to 108 1/2 R, operated with four handles or two handles as a ratchet stock. All tools supplied with dies and handles complete at above prices.

FOR OTHER STYLES OF PIPE STOCKS, SEE INDEX

## OSTER POWER PIPE THREADING MACHINES

Fig. 300A to 308A  
Belt Driven Model

The Oster two-piece Nipple Jaws are attached to the regular vise on the machine, by means of two bolts. When the vise jaws are opened, the nipple is released from the jaw threads, the same as an ordinary piece of pipe. These jaws are made of steel, hardened, and will hold a close nipple.

Fig. 300B to 308B  
Motor Driven Model

These machines perform every one of the many pipe threading jobs in ordinary use—pieces long or short, straight or bent, over or under size, nipples, any length, and all thread nipples.

Every operating part is right under the hand, so that not a moment is wasted in useless action of the operator. Without changing his position, he sees the work of the threading dies at all times. Quick results are given by the lever controlled die head, which is released and reset instantly after the thread is finished. The vise grips the work by a single turn of the wheel, bringing it to an absolute center. All bearings are large and the vise has no chance of getting out of alignment with the center of the dies.

An Automatic Die Release can be added to these machines, designed for cutting all threads equal length. It is recommended where a number of pieces of the same length must be threaded. When adjusted it will automatically open the dies and remove the work from the dies without any attention on the part of the operator. It can be set to cut any length thread desired.

The Oster Fountain Oil Flood pumps an individual stream of oil to each die, constantly, and to all positions underneath of this die, even when in position underneath the pipe. This saves your dies, produces smoother and better threads, prevents splashing the oil all over the machine, and also prevents oil draining inside the pipe.

An unusual feature is the threading of short lengths. No. 300A will handle pieces down to 3 1/2 inches; No. 304A, 4 1/2 inches; No. 306A, 5 1/2 inches, all with the regular equipment.

Number	Size of Pipe	Sets of Dies	Price	Extra Dies, per set (4 Pcs.)	Drive	Nipple Jaws Each Size	Shipping wt., lbs.

## OSTER MATCHLESS DIE-STOCKS

For Hand Operation

Fig. 3B

No. 3B MATCHLESS EASY-CUTTING STOCK is another self-contained, all-in-one tool with no loose parts. Narrow, receding, easy-cutting, adjustable dies, steel guides and the patented Oster chip shield for the leader screw assures good threads and long wear.

No. 3BR MATCHLESS RATCHET STOCK is similar, but has the added convenience of the ratchet feature. Chips and oil cannot clog the leader screw in either tool.

This new 4BR MATCHLESS RATCHET STOCK

Fig. 4BR  
Ratchet Pattern; Top View

is built to meet the demands for a Matchless Stock of greater capacity—2 1/2 to 4 inches. One man can operate this tool on all sizes of pipe within the range as catalogued.

Number	Sets of Dies	Price	Extra Dies	Ship'g. Wt.
1B 1/4 to 3/4 in.....	2	\$14.50	\$1.50	11 lbs.

FOR OTHER STYLES OF SCREW PLATES, SEE INDEX

## "TOLEDO" PIPE THREADING DEVICES

Toledo Pipe Threading Devices are generally acknowledged to be the greatest labor-saving pipe threading tools on the market. Today one man can do the work that formerly required the services of two—and sometimes—four men. Toledo tools eliminate friction at the cutting edge, made possible by the use of very narrow dies, and by mechanically giving these dies a receding motion while cutting a thread. This makes the actual operation of cutting a thread such a simple matter that one man can cut any size thread, even up to 12 inch.

Fig. 0. "Toledo" Adjustable Threading Device  
No. 0

Capacity  $\frac{1}{8}$  inch to  $\frac{3}{4}$  inch Pipe Inclusive  
Complete with R. H. Dies

This tool is very light and compact; net weight 7 pounds; total length, from tip to tip of the handles, 24 inches.

It differs from every other tool of its capacity in that it embodies the receding-die feature for threading  $\frac{1}{8}$  inch and  $\frac{1}{4}$  inch pipe, and is the easiest operating tool for these sizes.

One set of dies is used for threading  $\frac{1}{8}$  inch pipe, another set for  $\frac{1}{4}$  inch and  $\frac{3}{8}$  inch pipe, and another for  $\frac{1}{2}$  inch and  $\frac{3}{4}$  inch pipe.

Left-hand dies can be furnished on special order, but when cutting left-hand threads it requires a separate set for each size pipe.

List price complete.....\$16.00  
Extra dies, per single set.....2.50

Fig. 00. "Toledo" Pipe Threader

Capacity  $\frac{1}{8}$  to  $\frac{3}{4}$  inch Inclusive

The newest thing in pipe threaders for small sizes of pipe. It produces perfectly true tapered threads of standard size. Lay the desired die-head on the ratchet, pull back the pawl and it drops into place. You are then ready to thread your pipe.

This tool can be used in the closest corners. There is nothing else on the market that is nearly so compact as this device, and it threads easily.

If you do not want all the die-heads, buy as many as you want. The dies can be taken from the die-heads and reground several times. When they wear out others can be bought in sets of four segments.

List price, ratchet only.....\$3.00  
 $\frac{1}{8}$ ,  $\frac{1}{4}$  and  $\frac{3}{8}$  inch die-heads with dies.....each 3.00  
 $\frac{1}{2}$  and  $\frac{3}{4}$  inch die-heads with dies....." 3.50  
New dies .....per set 2.00  
Special case for ratchet and die-heads.....each 1.00

Fig. 1. "Toledo" Adjustable Threading Device  
No. 1

Capacity 1 inch to 2 inch Pipe Inclusive

This tool is the "standard" among pipe-fitters of long practical experience.

Made either for cutting right-hand or left-hand threads. Neither tool will do both.

List price .....\$24.00  
Extra dies, per single set.....2.50

### "Toledo" Adjustable Ratchet Threading Device No. 1A (Not Illustrated)

Capacity 1 inch to 2 inch Pipe Inclusive

This tool is in every essential like the No. 1 except that it is equipped with a ratchet. It may be used with two handles as an ordinary die stock, or with one handle inserted in the ratchet case. It is desirable for threading pipe down in a trench or against walls, between rafters, etc. It is the easiest operating pipe threading tool in existence.

Made either for cutting right-hand or left-hand threads. Neither tool will do both.

List price .....\$30.00  
Extra dies, per single set.....2.50

Fig. 10. "Toledo" Adjustable Threading  
Device No. 10

Capacity 1 inch to 2 inch Pipe Inclusive

This tool is offered to those desiring a tool threading several sizes of pipe with one set of dies. While we do not believe this the most desirable practice from the standpoint of die service, yet a large number of users would rather buy new dies often than change dies for each size of pipe threaded. Left hand dies can be used in this tool and can be furnished on special order. It requires, however, a separate set of left hand dies for each size of pipe.

List price, complete with right hand dies.....\$28.00

# TOLEDO PIPE THREADING DEVICES

Fig. 2

Fig. 2. "Toledo" Geared Adjustable Threading Device No. 2

Capacity 2½ inch to 4 inch Pipe Inclusive  
Complete with Dies, Ratchet and Driving Cross

A light and compact tool, and the most easily operated pipe threading device in existence. Neither is the ease of operation obtained at the expense of speed. A 4 inch thread may be completed in ten minutes without undue effort. A 4 inch thread has been cut in six minutes.

List price .....\$100.00  
Extra dies, per single set..... 8.00

Fig. 3

Fig. 3. "Toledo" Geared Adjustable Threading Device No. 3

Capacity 4½ inch to 8 inch Pipe Inclusive  
Complete with Dies, Ratchet and Driving Cross

The lightest and most compact and by far the most easily operated pipe threading device of its capacity in existence. Its net weight is 155 pounds. With clearance in other directions, it may be operated on a pipe the center of which is within 10 inches of a wall or other obstruction.

One man can readily cut an 8 inch thread with same. Ease of operation is not obtained at the expense of speed.

List Price .....\$300.00  
Extra dies, per single set..... 12.00

All Right-Hand Tools are carried in stock for prompt shipment. Left-Hand Tools are shipped direct from factory.

Fig. 25

Fig. 25. "Toledo" Geared Adjustable Threading Device No. 25

Threads 2½ inch to 6 inch Pipe Inclusive  
Complete with Dies, Ratchet and Driving Cross

A tool intermediate in size to the No. 2 and No. 3. For those who require to thread pipe a little larger than the No. 2 will handle, yet do not need one as large as the No. 3.

Threads entire range of sizes with one set of dies. An extra set of dies furnished with the tools so a sharp set may always be on hand.

Embodies the die-receding principle; has no cam-plate, is very simple and positive in its action.

One man can thread 6 inch pipe easily.

List Price .....\$230.00  
Extra dies, per single set..... 8.00

Fig. 4

Fig. 4. "Toledo" Geared Adjustable Threading Device No. 4

Capacity 9 inch, 10 inch and 12 inch Inclusive  
Complete with Dies, Ratchet and Driving Cross

The illustration shows the "big fellow" of the line. There is no other apparatus for threading pipe of these sizes that does not weigh a ton or more. The "Toledo" No. 4 weighs 255 pounds. It is strictly portable. May be put on a pipe anywhere and operated. It takes two men to put it on a pipe, but after it is on, one man can cut the thread.

List price .....\$500.00  
Extra dies, per single set..... 20.00

IF YOU WANT TO KNOW WHAT EFFICIENCY IN SERVICE REALLY MEANS, SEND US YOUR NEXT ORDER

## PIPE STOCKS PUMP MAKERS' STOCKS AND DIES

Fig. 250

These double stocks are fitted with Little Giant adjustable bolt dies which are held in place by wedges. The wedges have beveled sides which fit the bevel on the dies. Tightening the wedge holds the dies rigidly in place.

No. 250—Cutting sizes,  $\frac{3}{8}$  14,  $\frac{1}{2}$  12, length of stock,  $13\frac{1}{2}$  inches; net weight,  $1\frac{1}{2}$  lbs.; price.....each **\$3.35**

Fig. 490

## SQUARE PIPE STOCKS AND DIES

With Square Solid Dies

These Pipe Stocks and Dies are designed to thread cast or wrought iron and steel pipe and are guaranteed to work to Briggs standard.

The Stocks are of malleable iron with nickel plated caps. The handles are of drawn steel tubing with outer ends rounded and welded solid. They are screwed into the stock and are nickel plated. The Dies are of the highest grade tool steel specially treated and tempered and will interchange with all makes of standard solid pipe dies. The material, its careful and uniform treatment and minimum tooth clearance combine to produce a die which will cut with reasonable ease and hold its cutting edges for a long period of time.

While dies with greater clearance may cut more easily at first, they will quickly lose this temporary advantage and becoming dull will break the teeth, lose size and produce a very poor thread.

## HICKEYS OR ROD BENDERS

For Bending Reinforcing Bars That Are Already Laid in the Forms

We manufacture these in sizes ranging from  $\frac{1}{4}$  inch to  $1\frac{1}{4}$  inches, inclusive, each being made to withstand the strain of the rod for which it is intended. Furnished complete with handles. Prices upon receipt of quantity and specifications.

FOR COMPLETE LINE OF ROD BENDERS AND CUTTERS, SEE INDEX

**"RELIABLE" SCREW PLATES****THIS CUT ILLUSTRATES  
NEW HEXAGON SHAPED GUIDE**

Which We are Now Furnishing with All  
"RELIABLE" Screw Plates

This guide can be turned in or out of the cap with an ordinary monkey wrench.

It will save trouble in adjusting the die. Simply hold the collet in the stock and turn the guide with a wrench.

It is also very useful in places where an ordinary stock cannot be used, in dressing over bruised threads or threading new

work, as with this guide the dies can be turned on with a wrench.

\*All assortments having a 15 inch stock include a handy Bit Brace Die Holder for use in threading Clip Bolts on wagons and automobiles without removing them from their places, also for other work where an ordinary stock cannot be used.

When ordering always specify the style of thread, whether "V" exact or oversize, or U. S. Standard.

All "Reliable" Screw Plates are fitted with dies that can be turned over in the collets; this enables you to use them for any purpose that a die can be used, hand work, machine work, cutting close to a bolt head or shoulder, cutting threads on short bolts that are not long enough to reach through the guide or follower; and then our handy bit brace feature enables you to use them in any ordinary bit brace, so you can dress over threads in many places where you cannot use an ordinary stock.

**FULL STOCKED LIST OF ASSORTMENTS**

## TAPS—DIES—COLLETS

## BIT BRACE DIES AND COLLETS

Fig. 858

Bit Brace Dies and Collets are very convenient for redressing threads or working in close quarters where it would be impossible to use a screw plate.

United States Standard threads recommended and furnished unless otherwise ordered.

Sizes and pitches not listed are special.

Left-hand threads are special.

Size	Threads per in.		Tap only	Die only	Collet only	Tap, Die and Collet

## ADJUSTABLE TAP WRENCHES

These Adjustable Tap Wrenches will hold both Hand and Pipe Taps. Adjustment is obtained by revolving one of the handles. The jaws are made of fine tool steel, are rigidly held in place, and give a tight, strong grip.

Sizes No. 7 and smaller are made from drop forgings. The body parts of larger sizes are malleable castings, with handles of electrically welded steel tubing, light and very strong. The bodies of all wrenches have a neat mottled finish.

No.	Capacity (Tap Sizes)			Full Length inches	Weight	Price
	Hand Inclusive inches	Machine Screw Inclusive	Pipe Inclusive inches

## SOLID HEXAGON DIES FOR BOLTS

Fig. S56A

These dies are used principally for repair work, and for dressing over bruised or rusty threads, and will go into any space that hexagon nuts will go into.

They can be used in bit-brace sockets, ratchet or monkey wrenches, and will be found convenient in many ways.

They are accurate, durable and will give satisfactory service.

United States Standard threads recommended and furnished unless otherwise ordered.

V exact and V oversize threads furnished to order at regular prices.

## NYE "SKIP TOOTH" DIES IMPROVED SOLID DIES FOR PIPE

Fig. S56C

Toolmakers know by experience that a square corner must be avoided in any hardened or tempered tool, and according to this law the Nye "skip tooth" feature has now been perfected by rounding out the bottom of the "skip tooth." These rounded bottoms are extended below the root line of the chaser, and they are exactly the same construction as that adopted in all circular saws.

In the Improved Nye Die the chasers are cast into a block of metal, and the angle of rake is controlled by the core boxes which are made absolutely true.

## HAND POWER BOLT THREADING MACHINES

THREADING MACHINE FOR  
BOLTS AND NUTS

Bench or Floor Machine for Hand Use

**Capacity**— $\frac{1}{4}$  inch to  $\frac{3}{4}$  inch bolt threads.  
**Spindle**— $\frac{1}{8}$  inch diameter hole full length to cut any length of thread.**Length of Thread**— $15\frac{1}{2}$  inches at one setting.**Carriage**—Moved forward and backward by lever to facilitate starting of thread. Jaw supports opened and closed by hand wheel and fitted with hardened tool steel grip-jaws for holding a variety of sizes and shapes.**Standard Equipment**Tap Chuck, Oil Tank, Wrench, Machine Nut Taps, Dies and Machine Collets for cutting  $\frac{1}{4}$  inch,  $\frac{5}{16}$  inch,  $\frac{3}{8}$  inch,  $\frac{7}{16}$  inch,  $\frac{1}{2}$  inch,  $\frac{5}{8}$  inch,  $\frac{3}{4}$  inch.**Prices with Standard Equipment**Bench machine complete.....\$50.00  
Mounted on legs.....57.00**U. S. Standard Threads furnished unless otherwise specified.**

V form and Whitworth threads furnished when requested.

**Space Occupied, Bench or Floor**— $34 \times 20$  inches.**Weights**—Net 260 lbs., boxed 255 lbs. With legs, net 300 lbs., boxed 375 lbs.

Fig. 6

THE CHAMPION  
THREAD-CUTTING  
MACHINEFurnished with Dies only, or with  
Dies, Taps and Tap Chucks

The Champion Thread-Cutting Machine is furnished with dies complete as shown in illustration or with dies, taps and tap chucks complete at a price so reasonable that it produces a pronounced new outfit for every blacksmith that is not already supplied with some machine representing far greater investment with possibly not as great capacity.

It has a rack for starting the thread on the bolt instantly and with the long leveraged crank which can be shortened or lengthened according to the work. The mechanical eye at once discovers that this is just the machine he wants to place any shop in shape to meet any and all competition.

The Champion is sold with our guarantee that the workmanship and material must be the very best.

- No. 1 Champion Thread-Cutting Machine with Dies only cutting  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{7}{16}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$  and  $\frac{3}{4}$  inches. Weight 40 lbs.....\$18.00
- No. 2 Champion Thread-Cutting Machine with Dies only cutting  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{7}{16}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$ ,  $\frac{7}{8}$  and 1 inch. Weight 45 lbs.....22.00
- No. 3 Champion Thread-Cutting Machine with

- Dies, Taps and Tap Chuck, complete, cutting  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{7}{16}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$  and  $\frac{3}{4}$  inch. Weight 45 lbs.....\$24.00
- No. 4 Champion Thread-Cutting Machine with Dies, Taps and with two Tap Chucks, complete, cutting  $\frac{1}{4}$ ,  $\frac{5}{16}$ ,  $\frac{3}{8}$ ,  $\frac{7}{16}$ ,  $\frac{1}{2}$ ,  $\frac{5}{8}$ ,  $\frac{3}{4}$ ,  $\frac{7}{8}$  and 1 inch. Weight 55 lbs.....30.00

## PRICE LIST OF DIES FOR THE CHAMPION THREAD-CUTTING MACHINE

Size	Price	Size	Price	Size	Price
$\frac{1}{16}$	\$1.50	$\frac{1}{4}$	\$1.50	$\frac{1}{2}$	\$1.50
$\frac{3}{16}$	1.65	$\frac{5}{16}$	1.80	$\frac{3}{4}$	2.00
$\frac{1}{8}$	2.25	$\frac{3}{8}$	2.40	$\frac{7}{8}$	2.60
$\frac{5}{16}$	2.85	$\frac{7}{16}$	2.90	1	3.00
$\frac{3}{8}$	3.40		3.75		

Unless otherwise ordered, we will furnish Dies of Thread-Cutting Machines  $\frac{1}{2}$  oversize V thread. Can supply these Dies with exact size V, U. S. Standard, or Franklin Institute, A. L. A. M., and Whitworth form of thread, at regular prices, when specially ordered.

SEE INDEX FOR EXTRA TAPS AND COLLETS

## THREADING MACHINES—HAND STOCKS

### Nos. 10 and 10½ Threading Machines for Bolts, Nuts and Pipe

Capacity, ¼ inch to 1¼ inch Bolt Threads, ¼ inch to 2 inch Pipe Threads. Right or left hand. Spindle, 1¼ inch diameter of hole full length to cut any length of thread. Length of thread, 14¼ inches at one setting. Carriage, vise is opened and closed by hand wheel and fitted with interchangeable hardened tool steel grip-jaws for holding a variety of sizes and shapes. Drive, Cone pulley; 3 step; 6, 8 and 10 inch for 3 inch belt. Countershaft speed, 10x3½ inch pulley, 250 R. P. M. Geared 5 to 1. Oil pump geared direct to spindle. Works equally well with right or left hand drive.

#### Standard Equipment

Machine Nut Taps, Little Giant Dies and Machine Collets, Tap Chuck, Oil Pump and Tank, Gear Guards.

No. 10—Cutting ¼ inch, ⅝ inch, ¾ inch, ⅞ inch, 1 inch (right hand). With Friction Countershaft.....	\$125.00
With Plain Countershaft.....	115.00
No. 10½—Cutting ¼ inch, ⅝ inch, ¾ inch, ⅞ inch, 1 inch, 1¼ inch, 1½ inch, 1¾ inch (right hand). With Friction Countershaft.....	143.90
With Plain Countershaft.....	133.90

Fig. 10

U. S. Standard threads furnished unless otherwise specified.

V form and Whitworth threads furnished when requested.

#### Extra Equipment

Right hand Adjustable Pipe Dies and Collets cutting ¼ inch, ⅝ inch, ¾ inch, ⅞ inch, 1 inch, 1¼ inch, 1½ inch, 2 inch (extra)..... \$31.00  
FOR EXTRA DIES, SEE "LITTLE GIANT DIES"

#### IN INDEX

Floor space, 53x27 inches. Weights (including Plain Countershaft) No. 10, net 630 lbs., crated 750 lbs.; No. 10½, net 655 lbs., crated 800 lbs.

#### Assortments of Full Mounted Stocks and Dies for Pipes

Briggs standard right-hand threads furnished in United States and Whitworth in other countries unless otherwise specified.

Left-hand threads at regular prices.

For convenience in shipping, the rack is knocked down and packed with the stocks in a plain durable case.

No. 271—Assortment of 4 stocks, dies and guides, cutting ¼, ⅝, ¾ and 1. Weighs 17½ lbs. Price including rack..... \$ 8.00

No. 272—Assortment of 5 stocks, dies and guides, cutting ¼, ⅝, ¾ and 1. Weighs 32 lbs. Price including rack..... 11.00

No. 273—Assortment of 6 stocks, dies and guides, cutting ¼, ⅝, ¾, 1 and 1¼. Weighs 43½ lbs. Price including rack 16.00

No. 274—Assortment of 8 stocks, dies and guides, cutting ¼, ⅝, ¾, 1, 1¼, 1½, 2. Weighs 71 lbs. Price including rack... 28.00

FOR PRICE OF PARTS, SEE "FULL MOUNTED STOCKS" IN INDEX

**Floor space occupied, 41x69 inches. Weights**  
 (including Friction Countershaft) net 1625 lbs.,  
 crated 1950 lbs.

**With Automatic Opening Die Head**

**Capacity,**  $\frac{1}{2}$  to 2 inch bolt threads,  $\frac{1}{4}$  to 2 inch pipe threads.\* Cuts right or left hand. **Spindle,**  $2\frac{1}{8}$  inch diameter of hole full length to cut any length of thread. **Length of thread,** 17 inches at one setting. **Carriage** moved forward and backward by hand wheel to facilitate starting of threads. **Vise** is opened and closed by hand wheel and fitted with interchangeable hardened tool steel grip-jaws for holding a variety of sizes and shapes. **Drive,** Cone pulley; 3 step; 10, 12 and 14 inch for  $4\frac{1}{2}$  inch belt. **Countershaft speed,** 14x4 inch pulley, 300 R. P. M. **Geared** 12 to 1. **Oil Pump** geared direct to spindle. Works equally well with right or left hand drive.

**Machine Equipped as Follows:**

Automatic Opening Die Head, Tap Jaws, Oil Pump and Tank, Gear Guards, Splash Hood and Wrenches. Machine Nut Taps and Die-lands cutting right hand threads as follows:  $\frac{1}{2}$  inch,  $\frac{3}{8}$  inch,  $\frac{1}{4}$  inch,  $\frac{3}{4}$  inch, 1 inch,  $1\frac{1}{2}$  inch,  $1\frac{3}{4}$  inch, 2 inch.

Including Friction Countershaft.....\$335.00  
 Including Plain Countershaft..... 325.00  
 Without Countershaft..... 300.00  
 Extra Die-lands, per set 4 pieces..... 4.00

**U. S. Standard threads furnished unless otherwise specified.**

Whitworth threads furnished when requested.

V form threads are not furnished with this size machine.

## No. 32 LITTLE GIANT OUTFIT

**With Automatic Opening Die Head**

**Capacity,**  $\frac{1}{4}$  inch to 1 inch bolt,  $\frac{1}{4}$  inch to 1 inch pipe.\* Cuts right or left hand. **Spindle,**  $1\frac{1}{2}$  inch diameter of hole full length to cut any length of thread. **Length of thread,** 14 inches at one setting. **Carriage** moved forward and backward by hand wheel to facilitate starting of threads. **Vise** is opened and closed by hand wheel and fitted with interchangeable hardened tool steel grip-jaws, for holding a variety of sizes and shapes. **Drive,** Cone pulley; 3 step, 6, 8 and 10 inch for 3 inch belt. **Countershaft speed,** 12x4 inch pulley, 250 R. P. M. **Geared** 5 to 1. **Oil Pump** geared direct to spindle. Works equally well with right or left hand drive.

**Machine Equipped as Follows:**

Automatic Opening Die Head, Tap Jaws, Oil Pump and Tank, Gear Guards, Splash Hood, Wrenches.

Machine Nut Taps and Die-lands cutting right-hand threads as follows:  $\frac{1}{4}$  inch,  $\frac{3}{8}$  inch,  $\frac{1}{2}$  inch,  $\frac{3}{4}$  inch, 1 inch,  $1\frac{1}{2}$  inch,  $1\frac{3}{4}$  inch, 2 inch.

With Friction Countershaft.....\$190.00  
 With Plain Countershaft..... 180.00  
 Without Countershaft..... 165.00  
 Extra Die-lands per set 4 pieces..... 2.50

**U. S. Standard threads furnished unless otherwise specified.**

V form and Whitworth threads furnished when requested.

Fig. 32

**\*Extra Equipment**

Right-hand Pipe Die-lands cutting  $\frac{1}{4}$  inch,  $\frac{1}{2}$  inch,  $\frac{3}{8}$  inch,  $\frac{1}{2}$  inch,  $\frac{3}{4}$  inch, 1 inch (extra).....\$15.00  
 Briggs standard furnished unless otherwise specified. Whitworth standard furnished when requested.

**Floor space,** 32x56 inches. **Weights** (including Friction Countershaft) net 925 lbs., crated 1050 lbs.

## FLOOR AND POST DRILLS WESTERN CHIEF ELECTRIC DRILL No. 20

A Long Stroke Post Drill equipped with a high class, powerful motor of the best make, costing less than 25c a day to operate.

There are no belts, the motor being directly connected with spur gear drive, accurately cut.

Fast and slow speed, instant change.

Horizontal positive gear driven worm feed, changeable instantly to fast, slow or medium, as desired.

Up and down run of spindle 8 inches, which is very important for shops, especially where wood-work is done.

Drills to center of 18 inch circle.

Bores 0 to 1½ inches.

Up and Down run of Spindle, 8 inches.

Up and Down run of Table, 20 inches.

Greatest distance from Table to Spindle, 19 inches.

Spindle bored for ½ or ¼ inch shank bits. Always state size when ordering.

Weight, 350 pounds.

List Price (as illustrated) .....\$135.00

Fig. 28

## WESTERN CHIEF SENSITIVE BENCH DRILL No. 28

For Light and Rapid Drilling

Drills to the center of a 9 inch circle. Bores 0 to ½ inch. Vertical traverse of spindle, 3¼ inches. Vertical traverse of table, 8 inches. Greatest distance from table to spindle, 8 inches. Diameter of column, 2½ inches. Size of tight and loose pulleys,

List price .....\$25.00

4x1½ inches. Should run 650 revolutions per minute. Size of large cone pulley, 4¾x1½ inches. Size of small cone pulley, 3x1½ inches. Spindle is fitted with holes for drills having No. 1 taper shanks. Height, 32 inches. Weight, 85 pounds.

Fig. 0½

Fig. 0

Fig. 00

Fig. 3

No. 0½. Bores 0 to ¾ inch. Drills to center of 12 inch circle. Up and down run of spindle, 2¾ inches. Up and down run of table, 9½ inches. Greatest distance from table to spindle, 9½ inches. Takes bits with ½ inch shanks. Weight, 50 pounds. List each .....\$5.50

No. 0. Bores 0 to ¾ inch. Drills to center of 12 inch circle. Up and down run of spindle, 2¾ inches. Up and down run of table, 9½ inches. Greatest distance from table to spindle, 9½ inches. Takes bits with ½ inch shanks. Weight, 75 pounds. List each .....\$7.50

No. 00. Bores from 0 to 1¼ inches. Drills to center of 15-inch circle. Up and down run of spindle, 3 inches. Up and down run of table, 10¾ inches. Greatest distance from spindle to table, 13 inches. Size of pulleys for power, 8x2¼ inches, should run 200 revolutions per minute. Weight, 110 pounds. Spindle bored for ½ to 41/64 inch shank bits. Always state size when ordering. List each .....\$10.00

No. 3. Automatic self-feed. Drills to center of 14½ inch circle. Bores 0 to 1 inch. Up and down run of spindle, 3½ inches. Up and down run of table, 11 inches. Greatest distance from table to spindle, 10½ inches. Spindle bored for ½ or 41/64 inch shank bits. Size of pulleys, for power, 8x2¾ inches. Always state size when ordering. Weight 95 lbs. List price each .....\$10.00

## FLOOR AND POST DRILLS

No. 16. A Post Drill with all the fine features of machine shop floor drills. Straight and bevel gears are cut. Fast and slow speed, instant change. Hand lever feed, also horizontal gear-driven positive self-feed, changed to fast, slow or medium speed instantly. These feeds work independently of each other, and bit is lifted quickly. Raise and lower device to table. Drills to center of 24 inch circle. Bores 0 to 1½ inches. Up and down run of spindle 6¼ inches. Up and down run of table, 15½ inches. Greatest distance from table to spindle, 18½ inches. Size of pulley, 10¼x2½ inches. Should run 175 to 180 revolutions per minute. Spindle bored for ½ to ¾ inch shank bits. Always state size when ordering. Weight, hand power 340 pounds; hand and power 360 pounds. Always shipped without pulleys, unless ordered.

Hand Power only ..... List \$42.50  
With Pulley (as illustrated) ..... " 46.50

Fig. 16

Fig. 17

No. 17. A finished floor Drill, both hand and pulley power. Straight and bevel gears are cut. Fast and slow speed, instant change. Hand lever feed, also horizontal gear-driven positive self-feed, changed to fast, slow or medium instantly. These feeds work independently of each other, and bit is lifted quickly. Raise and lower device to table. Drills to center of 24 inch circle. Bores 0 to 1½ inches. Up and down run of spindle, 6¼ inches. Up and down run of table, 15½ inches. Greatest distance from table to spindle, 18½ inches. Height of machine, 71 inches. Floor space, 15x26 inches. Size of pulleys, 10¼x2½ inches. Should run 175 to 180 revolutions per minute. Spindle bored for ½ or ¾ inch shank bits. Always state size when ordering. When specially ordered we will bore spindle to receive No. 3 Morse taper. Weight, 535 pounds, hand and pulley power as shown.

List price, Hand and Pulley Power (as illustrated) ..... \$65.00

No. 7. Automatic self-feed. Cut gears, fast and slow speed, instant change. Drills to center of 21 inch circle. Bores 0 to 1½ inches. Up and down run of spindle, 5 inches. Up and down run of table, 16½ inches. Greatest distance from table to spindle, 19½ inches. Size of pulleys for power, 10¼x2½ inches. Should run 175 to 180 revolutions per minute. Spindle bored for ½ or ¾ inch shank bits. Always state size when ordering. Weight, hand power, 275 pounds; pulley power, 295 pounds. The shaft of this drill (when ordered hand power) is left extended to receive pulleys any time thereafter. Always shipped without pulleys, unless ordered.

List price, without pulleys, Hand Power only ..... \$33.50  
List price, with Pulleys (as illustrated) ..... 37.50

No. 18. Spindle is double equipped with ball bearings. Straight and bevel gears are cut. Fast and slow speed, instant change. Horizontal, positive, gear-driven self-feed, changeable instantly to fast, slow or medium as desired. Hand lever feed, working independent of self-feed; the most powerful of any post drill on the market. Permits a quick lift or return of spindle, an excellent feature for wood boring. Raise and lower device to table. Drills to center of 21 inch circle. Bores 0 to 1½ inches. Up and down run of spindle, 5½ inches. Up and down run of table, 16½ inches. Greatest distance from table to spindle, 18 inches. Size of pulleys, 10¼x2½ inches. Should run 175 to 180 revolutions per minute. Spindle bored for ½ or ¾ inch shank bits. Always state size when ordering.

When ordered hand power only, shaft is left extended so that pulleys may be placed at any time.

Hand Power only, weight, 300 lbs. .... List price \$40.50

Hand and Power (as shown), weight, 320 lbs. .... List price 44.50

Fig. 7

Diameter of spindle in sleeve,  $1\frac{1}{8}$  inches.

Spindle socket, No. 3 Morse.

Drills to center of 21 inch circle.

Diameter of table, 16 inches.

Fig. 35. Upright Drill

### DESCRIPTION

Diameter of column,  $5\frac{1}{2}$  inches.

Travel of table on column, 17 inches.

Size of cone pulleys,  $8\frac{1}{2}$ ,  $7\frac{1}{4}$ ,  $5\frac{1}{2}$ ,  $4\frac{1}{2}$  inch face.

Diameter of tight and loose pulleys,  $8\frac{1}{2}$  inch face.

Speed of countershaft, about 380 R. P. M.

Net weight, No. 36, 680 pounds.

Net weight, No. 35, 590 pounds.

## NO. 15 WESTERN CHIEF DRILL

Ball Bearings. Cut Gears. Back Geared. Self-feed. Changeable Speed.

Drills to center of 19-inch Circle. Bores 0 to  $1\frac{1}{2}$  inches. Up and down run of spindle 4 inches. Up and down run of table,  $11\frac{3}{4}$  inches. Greatest distance from table to spindle,  $13\frac{1}{4}$  inches. Size of pulleys,  $8\frac{1}{2}$  inches. Should run 200 revolutions per minute. Spindle bored for  $\frac{1}{2}$  or  $\frac{5}{8}$  inch shank bits. Always state size when ordering.

It has two speeds. Fast and Slow, and for heavy drilling the slow speed is instantly obtained by inserting the crank handle in rim of fly wheel.

The shaft on this drill (when ordered hand power) is left extended, to receive pul-

Fig. 15. Western Chief

leys at any time thereafter.

Hand Power (as shown), weight 180

lbs. .... Each, \$17.50

Hand and Pulley Power, weight 190

lbs. .... 19.50

## WESTERN CHIEF DRILL NO. 19

A low-priced combined hand and self-feed Drill. Adapted to ordinary shop use.

The hand and self-feed are independent of each other, and for quick work, such as wood boring, it is unsurpassed, as bit is quick-lifted.

Drills to center of  $16\frac{1}{2}$  inch circle.

Bores 0 to  $1\frac{1}{4}$  inch.

Up and down run of spindle,  $5\frac{1}{2}$  inches.

Up and down run of table, 11 inches.

Greatest distance from table to spindle, 14 inches.

Spindle bored for  $\frac{1}{2}$  or  $\frac{3}{4}$  inch shank bits. Always state size when ordering.

When ordered hand power only, the shaft is left extended, so that pulleys may be placed at any time.

### PRICES

Hand Power only .....\$18.00

With Pulley (as illustrated) ..... 20.00

Fig. 19. Western Chief

## WALL OR POST RADIAL DRILLS

Drill No. 50

These drills are extremely accurate and powerful. They embody many exclusive and valuable features, and combine several drills in one—all stationary floor drills up to 30 inch and 2 1/2 foot radial. The radial type of drill represents the only complete type of drilling machine and can be used where the stationary spindle type cannot. This is especially true in garages, bridge, boiler, machine, blacksmith shops, etc., or any place where a wide range of drilling is done.

The arm can be swung against the wall and securely tightened in any position. These drills are driven by a four-step cone countershaft (with self oiling bearings) which should be attached to the ceiling. The spindle head can be traversed along the arm by means of hand wheel screw, and can be firmly clamped in any position. The spindle has a quick return hand lever, in addition to the regular hand feed lever.

## SPECIFICATIONS

Height of drill, 56 inches.

Drills to center of circle outside of column, 64 inches with 2 1/2 foot arm—84 inches with 3 1/2 foot arm.

Greatest distance of center of spindle to column, 32 inches with 2 1/2 foot arm—42 inches with 3 1/2 foot arm.

Smallest distance of center of spindle to column, 7 inches.

Greatest distance of spindle table, 18 inches.

Traverse of spindle up and down, 9 inches.

Diameter of spindle inside sleeve, 1 1/8 inches.

Diameter of column, 5 1/2 inches.

Size of cone pulleys, 8 3/4, 7 1/4, 5 1/2, 4x2 1/2 inch face.

Diameter of tight and loose pulleys, 8x2 1/2 inch face.

Speed of countershaft, about 380 R. P. M.

Net weight, No. 50, 800 lbs; No. 51, 850 lbs.

Spindle, No. 3 Morse, will carry 1 1/4 inch drill.

Equipped with all necessary gear guards (not illustrated). Four-step countershaft furnished as part of regular equipment. Wood post not furnished with drill.

Drill No. 51

## LIST PRICE

Model 50, 2 1/2 feet.....	\$200.00
Model 50, 3 1/2 feet.....	225.00
Model 51, 2 1/2 feet.....	300.00
Model 51, 3 1/2 feet.....	325.00

## ELECTRICALLY-DRIVEN SENSITIVE DRILLS

## FRICTION AND DIRECT DRIVE

These tools are designed for light work and will drill holes up to  $\frac{5}{8}$  inch in diameter. The spindle is made of tool steel, is counterbalanced by a spring, and is provided with a ball thrust bearing. The weight and thrust of the friction disc is also carried on a ball bearing.

The table is counterbalanced by a weight in the column and can be swung around out of the way when desired. A finished boss is provided on the base under the spindle for convenience in centering long shafts. There is an index line on column for setting the table central at any height. The friction disc drive permits of quick adjustment of speed and also keeps the power in proper proportion to the size of the drill. Furnished complete, ready to run. No belts, shafting or countershafting necessary.

## PORTABLE ELECTRIC DRILLS

## Direct Current

For drilling holes in castings and metals for all kinds. No. 3 drill has two speeds; the slow speed for drills larger than  $\frac{3}{8}$  inch, and high speed for drills  $\frac{3}{8}$  inch and smaller.

No. 4 is fitted with No. 2 Morse taper instead of chuck,

Fig. 0

No.	Capacity inches		Size of Chuck inches	Speed R. P. M.	H. P.	Wt., lbs.	Price Each
	Metal	Wood					
0	$\frac{1}{4}$	$\frac{1}{8}$	$\frac{1}{4}$	1500	$\frac{1}{8}$	6 $\frac{1}{2}$	\$ 60.00

4	1	1 $\frac{1}{4}$	..	250 & 460	$\frac{3}{8}$	33	180.00

Wound for either 110 or 220 volts, direct current

## Alternating and Direct Current

These drills are fitted with a universal motor and will therefore operate on any single phase circuit, 60 cycles or less, as well as on direct current of the same voltage. Fan cooled. Complete as shown, except screw feed attachment, which is supplied at a slight additional cost. Handles removable.

No. 3U is the same as No. 2U except that it is provided with two speeds. For drilling larger holes than  $\frac{3}{8}$  inch the drill bit must run at a slower speed than when drilling  $\frac{3}{8}$  inch and smaller.

No. 4U is fitted with No. 2 Morse taper instead of chuck. Speeds given are those of drill spindle when drilling to a maximum capacity; as the size of holes is decreased, the speed is increased.

TABLE OF U MODEL DRILLS

No.	Capacity inches		Size of Chuck inches	Speed R. P. M.	Wt. lbs.	Price Each
	Metal	Wood

4U	1	1 $\frac{1}{4}$	..	340 & 600	27	180.00

Wound for either 110 or 220 volts.

Fig. 1U

Fig. 2U

## CENTER GRINDERS

**With Hand Feed** These machines have been designed specially for grinding lathe centers. They are entirely self-contained, and have no loose parts to get lost or misplaced. Complete as shown, with wheel and internal grinding attachment. Larger or smaller wheels can be used.

When used for other than cutter grinding, the clamp for holding adjustment arm can be removed. The wheel end bearings are all made taper with adjustment for taking up wear. Made in three sizes. Shank removable.

No.	Traverse of Wheel inches	Size of Wheel Inches, Hole	Size of Shank inches	Wt. lbs.	H. P. of Motor	Speed R. P. M.	Direct Current	Price, Each 2 or 3-phase	Price, Each Single-phase

2	5	8x $\frac{3}{8}$ x $\frac{3}{4}$	$\frac{7}{8}$ x 1 $\frac{1}{2}$	45	$\frac{3}{4}$	2000	140.00	\$150.00	160.00

Wound for either 110 or 220 volts, direct or alternating current, 60 cycles. These grinders can also be furnished without hand feed, at a reduction in price.

FOR OTHER STYLES OF ELECTRIC TOOLS, SEE INDEX

## PORTABLE ELECTRIC DRILLS

## MODELS B AND C DRILLS

When Ordering, Specify Your Voltage

These drills deviate somewhat in design from that followed by other manufacturers of electric portable drills. It will be noticed that restored in the Temco drills is the original and convenient shape of the ordinary breast drill. This type of drill is still used by many today in preference to power driven drills no doubt on account of its simplicity in design and convenience in handling.

The motors used in Temco tools are of the high speed commutator type. The armature shaft is from nickel forging steel, and the armature core is built up from thin sheets of magnetic steel, the cores carefully wound and insulated. The commutator is made from hard drawn copper bars forced together under strong pressure. The mica is cut back from the surface under strong possibility of it protruding and preventing full contact of the brushes. This construction also causes a current of air to pass over the armature sufficient to keep the motor cool.

The bearings are of non-gran bronze, conceded the most efficient and durable bearing made for high speed work.

The brushes are of hard carbon and have a broad surface on the commutator. The brush springs are bronze and have a large number of coils, insuring a uniform tension on the brushes at all times regardless of wear.

The fields are built up of laminations of electrical sheet of the highest quality, and the coils are carefully wound and insulated.

## Convenient Features

They operate on either alternating or direct current. Attachment is made to the ordinary drop cord or incandescent lamp socket.

They run forward or reverse.

The switch reverses the motor instantly. It is conveniently located near the handle and is always accessible. It is operated without moving the hand of the handle.

The breaker feature for changing drills or taps instantly by hand without the use of the ordinary chuck wrench or key. The spindle speed of Model B Drill is regulated automatically by the amount of pressure back of the drill.

Model C Drill has two speeds, the gears running in grease.

The ratchet feed may be removed, the attachment in no way causing any inconvenience to the operator when the drill is used for strictly portable purposes.

Model C Drill has the off-set spindle allowing close quarter drilling. (Applies also to Model A Drill.)

## Model B Drill

Length over all including chuck.....15 inches  
Weight complete with cord, plug and chuck.....12 lbs.  
Capacity for drilling in steel or other metals..... $\frac{3}{8}$  inch  
Capacity for tapping in cast iron or thin sheet steel..... $\frac{3}{16}$  inch  
Speed—Spindle speed running idle.....900 r. p. m.  
Consumption under load (maximum).....200 watts  
Voltage (carried in stock).....110 or 220 volts  
(Wound for any voltage from 50 to 250)

Current from the ordinary drop cord either A. C. or D. C.  
Regular equipment includes standard  $\frac{3}{8}$  inch chuck, cord and attachment plug. The standard chuck furnished is for round or straight shank drills. It has hardened tool steel jaws and is strong, accurate and well made. A key is furnished with regular equipment but it is not needed when operating this chuck on account of the breaker attachment.

Special Equipment—A  $\frac{1}{2}$  inch geared chuck interchangeable with the standard chuck. Emery wheel ready for attachment. Automobile engine valve resator.

List price.....\$45.00

## Model A Drill (not illustrated)

This tool is designed for drilling in steel or wood. The off-set spindle allows drilling in close corners. The main driving spindle is run in a tobac bronze bushing, two inches in length. The lower handle can be readily removed whenever necessary.

The motor is the same as the motor used on our Model A Drill. The body of Model A Drill is made of aluminum. Arrangements are made for positive and effective oiling. The gears are accurately machined and run in grease. It is very light and convenient to handle, and is especially useful for drilling in sheet metal of all kinds.

## Specifications of Model A Drill

Length over all with chuck.....14 inches  
Distance from center of chuck to edge of motor body..... $\frac{3}{8}$  inch  
Weight complete with chuck.....9 lbs.  
Spindle speed, running idle.....2500 r. p. m.

## Model O Drill (not illustrated)

Model O Drill is especially designed for drilling in cast iron, brass and other soft metals. Also for light drilling in wood.

The general construction is similar to Model A Drill except in Model O Drill the chuck spindle is in the center of the motor body and is directly connected to the motor shaft without gear reduction. The chuck spindle runs in a tobac bronze bushing of ample bearing surface. Model O Drill will operate on either alternating or direct current.

## Specifications of Model O Drill

Length over all with chuck.....15 $\frac{1}{2}$  inches  
Speed under load.....4500 r. p. m.  
Weight, complete with chuck.....8 lbs.

## Model C Drill

Length, including chuck and ratchet.....16 $\frac{1}{2}$  inches  
Weight, including chuck and ratchet feed.....22 $\frac{1}{2}$  lbs.  
Length, including chuck only.....22 $\frac{1}{2}$  inches  
Weight, including chuck only.....21 $\frac{1}{2}$  lbs.  
Weight, equipped with sleeve for No. 2 Morse Taper Drills.....19 lbs.  
Capacity, in steel..... $\frac{1}{2}$  inch  
Capacity, tapping in cast iron or sheet metal..... $\frac{3}{8}$  inch  
Capacity of ratchet feed.....2 $\frac{1}{2}$  inches  
Speeds running idle (two speeds).....250-500 r. p. m.  
Speeds when ordered for special work.....500-1000 r. p. m.  
Consumption under load (maximum).....350 watts  
Voltage (carried in stock for 110 or 220).....50 to 250 volts  
Current from the ordinary drop cord either A. C. or D. C.

Regular equipment furnished with Model C Drill includes cord and plug, handle and  $\frac{1}{2}$  inch chuck for S. S. drills.  
Special Equipment—Model C Drill may be furnished with or without the ratchet feed.

A special sleeve may also be furnished to attach to the drill spindle for use with No. 2 Morse Taper Drills.

List price.....\$65.00

## ELECTRIC DRILLS CHICAGO PNEUMATIC

### HEAVY DUTY SIDE SPINDLE DRILL

Direct Current or Single Phase Alternating Current

Universal Type for 120-240 Volts

These drills, which are known as the Universal Type, possess the unique property of being capable of operation interchangeably on direct current or on single phase alternating current of 60 cycles or less. This feature is of great value to contractors or others who have occasion to do work in various localities which may be supplied with either current. The No. 000, No. 000X and No. 00 drills are supplied with breast plates only. The Nos. 0, 1 and 2 drills can be furnished with either feed screw, breast plate or spade handle, as desired.

Fig 1 S. S.

### ALTERNATING CURRENT ELECTRIC DRILLS

For 2 or 3 Phase—60 Cycles

Fig. 4 S. S.

Drills of the heavy duty type, can be furnished for two or three phase, 60-cycle current. The prices given below are for drills wound for either 120 or 240 volts, but the No. 2, 3 and 4 drills can be furnished for 440 volts, when required, at an additional cost of \$5.00 for each size. It is to be understood that these drills will not operate on single phase current, but it is necessary to have two or three phase for their operation.

## SOUTH BEND SCREW CUTTING ENGINE LATHES

Fitted with Automatic Longitudinal Feed and Automatic Cross Feed  
and Compound Rest

No. 40-16 INCH SWING

Regular equipment, as illustrated under lathe, is included in price

The following description applies to all sizes of South Bend Lathes No. 29, No. 33, No. 34, No. 36, No. 37, No. 40 and No. 44. The principal dimensions are shown in tabulated form on the opposite page.

**Bed** is rigid, cross ribbed by heavy box braces cast in at short intervals its entire length; has three V's and one flat way for front bearings of head and tail stock. The rack is of steel, cut from the solid bar.

**Head Stock** is equipped with improved reverse. Spindle is of special spindle steel accurately ground. Bearings are the best phosphor bronze with ample oiling facilities and adjustable for wear.

**Tail Stock** is off-set to allow compound rest to swivel parallel to the bed and is provided with set over for turning taper. Tail stock center is self-ejecting.

**Carriage** is strong with wide deep bridge; has T slots for clamping work for milling and boring. Both automatic cross feed and automatic longitudinal feed are operated from

front of apron and but one feed at a time can be engaged. Both feeds are driven by a splined screw and worm so that the thread of the lead screw is used for screw cutting only.

**Thread Cutting.** Lathe is indexed to cut standard threads from 4 to 40, right or left, including 11 1/2 pipe thread.

**Graduation.** The compound rest is graduated in degrees. The cross feed screw has graduated micrometer collar reading in one thousandths of an inch.

**Equipment** as shown in cut is included in the price and consists of large and small face plates, compound rest, two steel centers, center rest, change gears, adjustable stop for screw cutting, gear guards, necessary wrenches and double friction countershaft, also instruction book, How to Run a Lathe.

FOR PRICES SEE NEXT PAGE

EXTRAS:—Any of the above Lathes may be fitted with Raising Blocks, Taper Attachment, Gap Bed, Milling and Keyway Cutting Attachment.

## SOUTH BEND LATHES WITH GAP BED AND BRIDGE

**The Practical Lathe for all Around Work in the Machine and Repair Shop, adapted to Handling  
Work of both Small and Large Diameter**

**Sizes.** We furnish the 11 inch, 12 inch, 13 inch, 14 inch, 15 inch, 16 inch and 18 inch South Bend Lathes with gap bed when desired. For description and dimension of gap bed lathes see that of straight bed lathes, as the only difference between straight bed lathes and gap bed lathes is the bridge, and gap construction of bed, which requires more strength.

**Bridge** is used to close up the gap so that the lathe may be used as a straight bed for ordinary work. When work of large diameter is to be machined, bridge may be re-

moved from bed in a few moments, as it is accurately machined, scraped and fitted to gap, located by means of dowel pins and held in position by four substantial bolts. Bridge must be fitted in lathe at factory.

**Equipment** as shown in cut is included in the price of lathe and consists of large and small face plates, graduated compound rest, two steel centers, center rest, change gears, adjustable stop for screw cutting, a set of feed gears, gear guards, necessary wrenches, double friction counter shaft, and bridge.

### PRICE OF GAP AND BRIDGE IS EXTRA OVER STRAIGHT BED LATHE

**EXTRAS:** The gap bed lathe may be supplied at extra cost with—Milling and Keyway Cutting Attachment. Raising Blocks and Taper Attachment.

## SOUTH BEND MILLING AND KEY-WAY CUTTING ATTACHMENT FOR LATHES

This attachment is practical in the shop because it equips the lathe for doing the 101 jobs that otherwise could be done only on the shaper or milling machine.

The regular equipment consists of Milling Attachment, two steel V blocks, one crank handle, one double end wrench, and two bolts and nuts for attaching.

	No. 1	No. 3	No. 4	No. 5

No. 4 Attachment on a 15-inch Lathe

### KEY-SEATING WOODRUFF SYSTEM

The illustration is taken from the back of lathe, and shows the attachment holding a 1 ½ inch steel shaft which has been key-seated for the Woodruff system of key. A special chuck is fitted to the spindle lathe for holding the cutter.

No. 4 Attachment on a 15-inch Lathe

### SQUARING A STEEL SHAFT IN THE LATHE

Illustration shows a No. 4 attachment fitted to a lathe squaring a 1 ½ inch steel shaft. A spiral end mill is fitted into the taper of the spindle. The shaft is fed horizontally across the face of the end mill to the desired depth. Then by using the vertical feed you can get a clear sharp corner.

And end mill cutting in the above manner does not need near as much power as if it were cutting on the face, and it makes a much cleaner job.

# FORGES

Fig. BB and XBB

Fig. 8 and 9

## B. B. and X. B. B. FORGES

For Blacksmith, Wagon and Plow Shops, etc. Heavy and Light Work.

Stationary Blast Forges, very large, heavy and strong. Intended for shops supplied with power blast, or can be used with ordinary bellows or blower, if desired. Equipped with solid firepot with side and center blast tuyere ball. Have tool rest and racks and lever attachment to blast gate, by means of which the smith easily regulates the blast.

B. B. Height, 26 inches; hearth, 37½x41 inches; over all, 37½x51 inches.

	B. B.	X. B. B.
Plain, no Tank, no Hood, weight 375 lbs.	\$35.00	\$40.00
With Tank, no Hood, weight 440 lbs.	40.00	45.00
With Hood, no Tank, weight 390 lbs.	40.00	45.00
With Tank and Hood (as illustrated), weight 455 lbs.	45.00	50.00

(Always shipped PLAIN, unless otherwise ordered.)

## ROYAL FORGES NOS. 8 AND 9

For Large, Heavy Construction and Contractors' Work. Outdoor Use

Very large, roomy, heavy blacksmith Forges for plow and agricultural shops. These Forges are as large as any blacksmith will ever need for any kind of heavy work.

No. 8. Hearth, 27½x41 inches; over all, 27½x51 inches; fan, 12 inches; height, 26 inches.

	No. 8	No. 9
Plain, no Tank, no Hood, weight 435 lbs.	\$65.00	\$70.00
With Tank, no Hood, weight 500 lbs.	70.00	75.00
With Hood, no Tank, weight 450 lbs.	70.00	75.00
With Tank and Hood (as illustrated), weight 515 lbs.	75.00	80.00

(Always shipped PLAIN, unless otherwise ordered.)

When specially requested, will furnish Round Canopy Hood at same price as Half-hood.

Fig. 100

Fig. 253

Fig. 100—Royal Forge. For use of large Blacksmith, Wagon, Plow, and Railroad Shops, etc., where heavy work is done, and a first-class forge and fire needed. Blast is furnished by high grade blower with 12 inch fan geared 55 revolutions to one turn of crank, which furnishes blast ample for the largest work.	
The hearth is made of case iron; the legs are made of gas pipe and can be easily taken off for transportation. The tuyere iron is our genuine Royal Tuyere iron, which is made separate from the forge, preventing breakage when a fire is built on frosty mornings. This is one of the best forges made, and once used by a smith he will seldom use any other.	
The hearth is 31½ inches wide, 45½ inches long and 30 inches high; length over all, 53 inches. The crank turns either backward or forward and the capacity of the fire is to heat 4 inch iron to welding point.	
With one Tank, weight 395 lbs.	List Price \$30.00
With extra Tank (as illustrated), weight 325 lbs.	" 55.00
Fig. 253—Tiger Forge. For Well-drillers, Railroads, Boilermakers, Quarries, Contractors, Outdoor Work, etc. A good substantial, low cost Forge, equipped with high grade fan furnishing blast ample to heat 3½ inch iron. Hearth and fire-pot are heavy and will last a lifetime. A good rigid force, fully guaranteed.	
Blower, 9 inches; hearth, 25x36 inches; height, 30 inches; weight, 180 lbs.; capacity, 3½ inch iron.	
List Price	\$31.00

## FORGES

Fig. 35

Fig. 20

## ROYAL STEEL FORGE No. 35

The Royal Steel Forge No. 35 is extra large, well made, and is built for heavy work. It is well adapted for boiler makers, garages, repair shops, etc. Can be used for light work as well as for heavy, and is built to stand the heaviest work that comes to any shop. This Forge is equipped with The Royal Western Chief Blower, which is the best that money can buy. It has a 12 inch fan, geared 55 revolutions of the fan to one of the crank, producing a blast with a capacity to heat 4 inch iron to a welding heat. The hearth is made of steel, bound at the corners and top edges with angle steel, which not only makes a nice finish, but makes it exceedingly strong.

Fan, 12 inches.

Height, 30 inches.

Hearth, 30x36 inches.

Length over all, 44 inches.

Crank turns forward or backward.

List Price, without Tank, weight 195 lbs. .... \$60.00  
List Price, with Tank (as illustrated), weight 225 lbs. .... 65.00

## ROYAL FORGE No. 20

This forge is essentially the same as No. 35 Royal, except that it is not furnished with a full hood. It is intended for outdoor work and no provision is made to take care of the smoke. Equipped with Royal Western Chief Blower. Hearth is 30 inches wide, 36 inches long; height is 30 inches; length over all, 44 inches. Crank turns forward and backward. Forge has the same capacity as the Number 35, viz., heating 4-inch iron to welding point. It can easily be taken apart for transportation and all the parts packed in the hearth, which furnishes a very strong shipping case. This Forge has solid fire pot with ball tyure, furnishing both side and center blast.

List Price, without Tank, weight 190 lbs. .... \$58.00

List Price, with Tank (as illustrated) weight 220 lbs. .... 63.00

Always shipped without Tank, unless so ordered.

Fig. 36-37

Fig. 76

Fig. 40-60

## No. 36 and 37 ROYAL FORGES

Strong well-built, up-to-the-minute Forge, adapted for the use of repair shops, garages, etc. Equipped with the Royal Blower, which gives ample blast to heat 3½ inch iron. Fire pot is duck nest type with tyure ball, furnishing both side and center blast.

Fan, 10 inches.

Hearth, 24x24 inches.

Height, 30 inches.

Crank turns forward or backward.

Capacity to heat 3½ inch iron.

List Price, No. 36 (with shield), weight 135 lbs. .... \$40.00  
List Price, No. 37 (with hood), weight 140 lbs. .... 44.00

## ROYAL STEEL FORGES Nos. 40, 60 and 76

For Boilermakers, Rivet Work, Mines, Quarries and Army and Navy use. These Forges can be quickly knocked down and packed in a box 22x24x9 inches. Crank turns forward or backward. Capacity to heat 3½ inch iron.

No. 60 Blower, 10 inches. Hearth, 18 inches. Height, 30 inches. Weight, 90 lbs. .... List Price, 35.00  
No. 76 Blower, 9 inches. Hearth, 18 inches. Height, 30 inches. Weight, 85 lbs. .... List Price, 30.00

## THE No. 401 CHAMPION STEEL RIVET FORGE

Made With Adjustable Ball Bearings Only. Hearth 18 Inches in Diameter

No. 401 Champion Steel Rivet Forge has been on the market for 16 years and is used by the great majority of railroads, bridge builders, boiler and structural iron workers of the world, also very desirable for garages.

Nothing was ever seen to even approach it for a strong positive blast. We therefore can safely guarantee it to increase the work over and above any other make of Rivet Forge 25%. Its Gearing is the "Famous 400" Champion "Patented" High Speed Spiral-Type. It runs noiseless. It can be taken apart for transportation, and against set up in a few minutes. It will produce blasts to weld  $3\frac{1}{2}$  to 4-inch iron in ten minutes. No. 401 Steel Rivet Forge is used on 99 out of 100 structural steel buildings constructed. Crank turns either way to make the blast. Each turn of the crank produces 46 complete revolutions of the fan wing.

No. 401. Champion Steel Rivet Forge with Shield. Hearth 18 in. in diameter, height 30 in., fan 9 in. in diameter, weight 115 lbs. .... \$35.00

## TUYERE IRONS

## ROYAL TUYERE

Needs no clay

A large, heavy, solid iron fire-pot, with side and center blast Tuyere Ball.

Measures 8x9 ½ x4 inches inside.

Weights 50 pounds.

Diameter of inlet, 3 inches.

List price.....\$5.00

## MAMMOTH TUYERE

Same style as Royal, but extra large size.

Size, inside, 9x11 ½ inches, 4 inches deep.

No clay required.

Weights 55 pounds.

Has square ball, furnishing side and center blast.

Diameter of inlet, 3 inches.

List price.....\$5.00

## WESTERN CHIEF TUYERE

Has a loose ring top which rests on clay, to prevent falling or crumbling.

Weights 40 pounds.

Diameter of inlet, 3 inches.

List price.....\$2.50

FOR ALL KINDS OF FORGE TOOLS, SEE INDEX

Western Chief Tuyere

## PUNCHES AND FORGES

Fig. 254. Tiger Forge

**TIGER FORGE No. 254**

Each year the demand for crank gear forges is becoming greater, and in our No. 254, Tiger, we offer a forge in which the difference in price between the old lever type and the crank gear is small enough to allow anyone to possess an up-to-date forge.

Blower, 9 inches. Height, 30 inches.  
Hearth, 22 inches. Weight, 80 lbs.

Price, with shield.....\$24.55

Price, with hood.....27.00

Fig. 150. Chicago Forge

**CHICAGO FORGE No. 150**

Blower.....	8 inches	Height.....	30 inches
Hearth.....	18 inches	Weight.....	80 pounds

A light, move-about Forge; adapted to light work. Is suited to quarries, mines, etc., and popular as a low-priced article. Can be fitted with hood.

List price. No. 150, with shield.....\$13.00

List price. No. 151, with hood.....15.00

Marvel Punch No. 10  
Three-Quarter Front View

**MARVEL PUNCH No. 10**

Has row of four punches in front, sizes  $\frac{1}{8}$ ,  $\frac{3}{16}$ ,  $\frac{1}{4}$  and  $\frac{5}{16}$  inches, one punch being used at a time. All the punches may be left in place at all times if desired. Punches are simply dropped in place, and the steel block with thumb screw can be rapidly shifted over any punch desired, and punch tightened by turning thumb screw. The slide case is hardened steel. The movable block is hardened tool steel. The die is made of one piece,  $\frac{7}{8}$  inch wide, top face of die is  $1\frac{1}{2}$  inches from bottom of throat and  $1\frac{3}{4}$  inches from top of throat, and is also extended forward so as to be able to punch web and flange of channels, eye beams, angles, etc.

Lever is used swinging either way.

Capacity  $\frac{5}{16}$  inch hole in  $\frac{1}{4}$  inch stock.

Throat, 4 inches. Weight, 90 lbs.

List price. Complete with 4 punches, die and lever.....\$30.00

**THE MARVEL PORTABLE PUNCH No. 20**

Made Entirely of Steel

Marvel Portable No. 20

acting as a perfect brace. Capacity,  $\frac{1}{4}$  inch hole in  $\frac{1}{4}$  inch stock. Depth of throat, 2 inches.  
Weight, 16 pounds. Length over all, 38 inches.

Price, including one punch and die.....\$14.50

When not otherwise specified,  $\frac{1}{4}$  inch punch and die is sent with each No. 20 punch.

Extra punches and dies, all sizes, from  $\frac{1}{8}$  to  $\frac{1}{2}$  inch, always on hand.

## BLOWERS

## ROYAL WESTERN CHIEF BLOWER

## The Successful Blower

The Royal Western Chief Blower is far in advance of all other blowers, from the points of workmanship, appearance and service. Made of high grade materials throughout, by skilled mechanics, it offers an excellent investment in any shop where a dependable first-class blower is required.

The Gears are all cut out of a solid piece of the finest tool steel and are accurately gauged down to one one-thousandth part of an inch.

The Bearings are not only turned, but are lead ground and run in boxes of phosphor bronze. Every part of the machine is as carefully made as is possible for good material and mechanics to produce. The gears are so finely fitted that they work absolutely noiseless, the gear case being oil and dust tight. The lower gears run continually in a bath of oil, preventing wear and making this machine one of the most durable and the most reliable blowers made.

The Crank which can be adjusted for long or short strokes, turns one revolution to 55 revolutions of the fan, producing a blast with ordinary exertion, equal to a 60-inch bellows which is strong enough for any kind of blacksmith work any where.

The Stand is made of cast iron securely bolted together, and when desired it can be easily taken apart for transportation.

The Blower Head is hung on pivots and may be adjusted to suit any position required by the blacksmith. The fan case is provided with an oil cup at the top and an oil cock at the bottom. In starting the blower always open the oil cock at the bottom and pour the oil in the oil cup at the top until it begins to run out of the oil cock at the bottom, then close up both the oil cup and the oil cock and the lower gear will run in a bath of oil. It need not be oiled again for six months and will always produce a powerful blast.

The Fire Pot furnished with the Royal Western Chief Blower is a large, heavy solid iron fire pot with side and center blast tuyere ball. It weighs 50 pounds and measures 8x9½x4 inches deep inside. This fire pot needs no clay and has the best adjustment for controlling the fire.

List price ..... \$28.00

Royal Blower

## PRESSURE BLOWERS

For Forge Fire, Small Cupolas, Furnaces, etc.

These blowers are adapted to forge fires and small, light cupola work. They are very strong and durable, smooth running, and handsome in appearance. Sizes P3, P4, P5 and P6 have grease cup in addition to oil cup, so that should oil cup run dry the grease cup will continue to lubricate and prevent heating. Built for service.

## ELECTRIC BLOWERS

### NO. 4 ELECTRIC BLOWER

With Dustproof, 110 or 220 Volt Motor, Furnished for Either Alternating or Direct Current Circuits

One-fire, changeable-speed Electric Blacksmith Blower. Has a motor of a special type, developed exclusively for this service. Because of the hard service that an electric blower is put to in a blacksmith shop (due to the soot and dust, which shortens the life of a motor) it has been necessary to provide more durability than is usually required, and it is therefore, completely enclosed in a dustproof case. It will run in moderate temperature, without ventilation, and is equipped with automatic means of lubrication. This outfit is supplied with a five-speed durable type of regulating switch, for starting and controlling the speed of the motor, attached right on the blower, just above the motor, which saves the operator the unnecessary trouble of stooping over, or leaving his work, to get the desired blast.

Cost of operation, 2 to 3 cents per day. Economy in use and strain on motor will be saved if run just fast enough to give satisfactory results. When brushes on motor become worn, they should be replaced at once with others we furnish, as they are of special carbon.

**When ordering electric driven Forges or Blowers, furnish us with the following information:**

1. Whether current is alternating or direct.
2. If alternating current, find out cycles or alternations and state whether 110 or 220 volts. (Our standard motors are designed for 60 cycles.)
3. If direct current, the voltage is all the information needed.

List Price .....\$36.00

### NO. 2 ELECTRIC BLOWER

Height, 15 inches; net weight, 60 lbs.; diameter of outlet,  $4\frac{1}{4}$  inches; number of forge fires, 1 to 3.

A well built blower with powerful, constant speed, induction type motor with capacity to handle from one to three forge fires. Fully guaranteed. When ordering electric driven Forges or Blowers, furnish us with the following information:

1. Whether current is alternating or direct.
2. If alternating current, give cycles and whether 110 or 220 volt. (Our standard motors are designed for 60 cycles.) If direct current, voltage is all that is required.

List Price .....\$75.00

## PIPE AND BAR BENDING MACHINES

## No. 0 EYE BENDER

A convenient machine for mounting on bench for forming light stock without heating same.

Capacity

$\frac{1}{8}$  in. dia. Round Rod or Wire, without heating.  
 $\frac{1}{8}$  in. dia. or under Square Rod, without heating.  
 $\frac{1}{8}$  in. by 1 in. Flat Stock, or equivalent, without heating.  
 Net weight 40 lbs. Price.....\$25.00

## EYE BENDERS

Nos. 1, 2 and 3

Size No. 1. Takes stock up to and including  $\frac{1}{2}$  inch. Bends rings and eyes up to 2 $\frac{1}{2}$  inches, outside diameter. Net weight, 62 lbs.

Price of No. 1 Eye Bender, with one size of forming pin.....\$25.00

Size No. 2. Takes stock up to and including  $\frac{5}{8}$  inch. Bends rings and eyes up to 3 inches, outside diameter. Net weight 83 lbs.

Price of No. 2 Eye Bender, with one size of forming pin.....\$30.00

Size No. 3. Takes stock up to and including 1 $\frac{1}{2}$  inch. Bends rings and eyes up to 7 inches, outside diameter. On account of the increased power required to bend offsets for eyes out of heavy stock the No. 3 machine is fitted with a special auxiliary hand lever for operating offset dog instead of by foot lever. Net weight 152 lbs.

Price of No. 3 Eye Bender, with one size of forming pin.....\$50.00

## Extra Forming Dies

Any size up to 1 $\frac{1}{2}$  inch diameter, each.....\$1.00

Any size from 1 $\frac{1}{2}$  inches up to 3 inches diameter, each.....1.50

Any size from 3 inches up to 7 inches diameter, each.....2.00

## PIPE BENDING MACHINE

Improved Style No. 5-A.

The pipe is not crowded forward by a roller, but is forced into the quadrant or forming die by means of a "V"-shaped rocker bar, which supports the wall of

pipe at point of bending; this method insures a clean, uniform bend, without flattening pipe. While we recommend a 14 inch radius, or greater, for pipe as large as 2 inches, we have bent this size pipe successfully to a radius as small as 9 inches. 1 $\frac{1}{2}$  inch pipe to 8 inches, 1 $\frac{1}{4}$  inch pipe to 6 inches and 1 inch to 4 inches radii.

Piping of steel, iron, brass, copper, etc.,

can be bent cold up to and including 2 inches diameter; will also bend light angles, flats and tee bars by means of special formers.

The quadrants regularly furnished are for 1 inch pipe, with a radius of 6 inches, 1 $\frac{1}{4}$  inch pipe, with a radius of 9 inches, 1 $\frac{1}{2}$  inch pipe with a radius of 12 inches, and 2 inch pipe, with a radius of 14 inches. Net weight 811 lbs.

Price, with plain stand and four adjustable quadrants as above described.....\$165.00  
 Special quadrants will be furnished at extra cost.

## MARVEL ROD CUTTER

Cutting Dies have round opening of correct size to cut off rods and wire within the capacity of the machine, which insures good work with ends round and true.

The Marvel Rod Cutter is so arranged as to bring the lever at a convenient height from the bench, and the gearing is so placed as to remove all danger of crushing the operator's hand. The round steel lever can be instantly removed, when desired.

The center of leverage is down low, which lessens the pull on the bench. The neat gauge is very handy when cutting a number of pieces of the same length.

No. 5. Cuts rods  $\frac{3}{8}$ ,  $\frac{7}{8}$ ,  $\frac{1}{2}$ ,  $\frac{3}{4}$ ,  $\frac{1}{4}$  in. and intermediate sizes. Weight 12 lbs. Complete with lever, gauge and gauge rod, each....\$ 6.00

No. 6. Cuts rods  $\frac{5}{8}$ ,  $\frac{7}{8}$ ,  $\frac{1}{2}$ ,  $\frac{3}{4}$ ,  $\frac{3}{8}$  in. and intermediate sizes. Weight 35 lbs. Complete with lever, gauge and gauge rod, each 10.00

No. 7. Cuts rods  $\frac{7}{8}$ ,  $\frac{3}{4}$ ,  $\frac{5}{8}$ ,  $\frac{1}{2}$ ,  $\frac{3}{8}$  in. and intermediate sizes. Weight 95 lbs. Complete with lever, gauge and gauge rod, each 22.00

FOR OTHER STYLES OF BENDING MACHINES, SEE INDEX.

## PIPE AND BAR BENDING MACHINES

### BAR BENDING TOOLS

Specialy valuable for contractors for reinforced concrete work. Heavy bars can be bent cold on the job. Machine is easily portable. Used by the U. S. Government on the Isthmian Canal.

#### Sizes

Nos. 4 and 5

THIS RATCHET HANDLE IS 19 INCHES LONG

A very powerful machine, to be operated by one man, for bending iron rods without heating the same. To meet the demand for a machine capable of bending iron rods and bars of large size cold, we have designed the Nos. 4 and 5 benders. These machines have an auxiliary ratchet lever, which operates a pinion against a series of teeth in the frame, at a large ratio, thus making them very powerful.

The ratchet pawl may be thrown out of engagement and machine operated with the regular lever, making it suitable for bending light stock at a rapid rate. Will bend up to 90°.

THIS REMOVABLE BAR IS ABOUT 5 FT LONG USED FOR DIRECT PULL IN BENDING LIGHT STOCK FOR WHICH CONSIDERABLE LEVERAGE IS NOT REQUIRED

REMOVABLE RATCHET HANDLE TO BE USED WHEN BENDING EXTRA HEAVY BARS

Top view, showing a square twisted bar bent to 90°.

#### No. 4 BAR BENDER

For Cold Bending: Flat  $\frac{1}{2} \times 2$  in., Round  $1\frac{1}{4}$  in., Square 1 in., Square Twisted 1 in. or less.

For Hot Bending: Flat  $\frac{3}{4} \times 2$  in., Round  $1\frac{1}{2}$  in., Square  $1\frac{1}{4}$  in., Square Twisted  $1\frac{1}{4}$  in. or less.

Net weight 460 lbs. Price, complete with Stand .....\$90.00

#### No. 5 BAR BENDER

For Cold Bending: Flat  $\frac{3}{4} \times 2$  in., Round  $1\frac{1}{2}$  in., Square  $1\frac{1}{4}$  in., Square Twisted  $1\frac{1}{4}$  in. or less.

For Hot Bending: Flat  $1 \times 2$  in., Round 1 in., Square  $1\frac{1}{2}$  in., Square Twisted  $1\frac{1}{2}$  in. or less.

Net weight 520 lbs. Price, complete with Stand .....\$115.00

**Notes:**—Special Dies, any width up to 6 inches, can be furnished for bending wide flat stock; also, dies for edge bending, angle iron bending or other special shapes to order.

### BAR BENDING TOOLS

#### No. 2 "U" Bender

Suitable for bending round, square, flat or square twisted bars into "U" shapes or any angle up to 180° with a radius at point of bending to correspond to size of forming pin. Rectangular bends can be made by substituting rectangular front die in place of forming pin.

#### CAPACITIES:

##### No. 1 "U" Bender

For Cold Bending: Flat  $\frac{1}{2} \times 2$  in., Round  $\frac{1}{2}$  in., Square  $\frac{1}{2}$  in., Square Twisted  $\frac{1}{2}$  in. or equivalent.

For Hot Bending: Flat  $\frac{1}{2} \times 2$  in., Round  $\frac{3}{4}$  in., Square  $\frac{3}{4}$  in., Square Twisted  $\frac{3}{4}$  in. or equivalent.

##### No. 2 "U" Bender

For Cold Bending: Flat  $\frac{3}{4} \times 3$  in., Round 1 in., Square  $\frac{3}{4}$  in., Square Twisted  $\frac{3}{4}$  in. or equivalent.

For Hot Bending: Flat  $\frac{3}{4} \times 3$  in., Round  $1\frac{1}{4}$  in., Square  $1\frac{1}{2}$  in., Square Twisted  $1\frac{1}{2}$  in. or equivalent.

#### PRICES:

No. 1 "U" Bender, 65 lbs. net.....\$28.00  
No. 2 "U" Bender, 185 lbs. net..... 45.00  
For facing dies with tool steel for cold bending \$5.00 extra.

#### Extra Round Forming Dies

2 in. and under .....\$1.00  
Over 2 in. and up to 4 in. .... 1.50  
Over 4 in. and up to 6 in. .... 2.00  
Over 6 in. and up to 7 in. .... 2.50

**Notes:**—When it is desired to bend flat stock of a greater width than the maximum specified for these machines we can arrange special dies to order.

#### Extra Dies

Set of Edge Bending Dies.....\$5.00  
Angle Iron Die (suitable for bending angle iron after a "V"-shaped piece has been cut out of one leg angle) ..... 2.50  
Angle Iron Die with Plate (suitable for bending angle iron without cutting "V" shaped piece out of one leg) ..... 7.50

## FRAME BENDERS

#### CAPACITIES:

No. 1 Bender. For Cold Bending:  $\frac{1}{2}$  in. round or square rods, or less. Flat stock  $\frac{1}{2} \times 2$  in. or equivalent. For Hot Bending: Round or square rods up to  $\frac{3}{4}$  in. Flat stock  $\frac{3}{4} \times 2$  in. or equivalent. Will bend up to 90°.

No. 2 Bender. For Cold Bending:  $\frac{3}{4}$  in. round or square rods. Flat stock  $\frac{3}{4} \times 2$  in. or equivalent. For Hot Bending: 1 in. round or square rods. Flat stock  $1 \times 2$  in. flatwise or  $\frac{3}{4} \times 1\frac{1}{2}$  in. and under edgewise, or equivalent. Will bend up to 90°.

or square rods. Flat stock  $\frac{1}{2} \times 2$  in. flatwise or  $\frac{3}{4} \times 1\frac{1}{2}$  in. and under edgewise, or equivalent. Will bend up to 90°.

	Net	Price
No. 1 Bender, with cast-iron dies. . .	52 lbs.	\$20.00
No. 1 Bender, with dies faced with tool steel for cold bending. . .	52 lbs.	25.00
No. 2 Bender, with cast-iron dies. . .	120 lbs.	35.00
No. 2 Bender, dies faced with tool steel. . .	120 lbs.	40.00

#### EXTRAS

Edge Bending Dies, for bending flat stock edgewise ..... 5.00  
Angle Iron Die, for bending angle iron after a "V"-shaped piece has been cut from upper wing ..... 2.00  
Sharp Angle Die, for making bends less than 90 degrees ..... 2.50

FOR OTHER STYLES OF BENDERS, SEE INDEX

## TIRE BENDERS

## THE CHAMPION NEW PATENT PEERLESS

Fig. 4091 has an adjusting screw at each end of the roll, with a graduated indicator on each side of the bender, showing the exact size of the tire being bent. The advantage of lifting the center roll out instead of drawing, as in all other benders, is that the collars need not be moved when tire is taken out; consequently, when once set, is always ready. It can be changed from slow to fast speed in an instant; is made in double gear only.

- No. 0 Extra-Heavy Peerless Bender, bends 6x1 in., weight 450 lbs. ....\$45.00  
 No. 1 Peerless Bender, bends 4x1 in., weight 365 lbs. 40.00  
 No. 2 Peerless Bender, bends 3x1 in., weight 265 lbs. 30.00  
 No. 3 Peerless Bender, bends 3x ¾ in., weight 185 lbs. 24.00

All above benders made for power when specially ordered, for which an extra charge will be made.

Fig. 4091

## ILLINOIS BENDERS

Fig. 4092. Nos. 2, 2 ¼ and 2 ½

No. 2 is made with gear and pinion, has turned rollers and bearings, and will bend 3 ¼-inch tire, or smaller, to a circle 24 inches in diameter, or larger.

With crank. ....\$7.00

No. 2 ¼ is made as No. 2, but will bend 4 ½-inch tire, or smaller, to a circle 24 inches in diameter, or larger.

With crank. ....\$7.75

No. 2 ½ is made as No. 2, but will bend 6-inch tire, or smaller, to a circle 24 inches in diameter, or larger.

With crank. ....\$8.50

## Extra Heavy

Fig. 4094. No. 3 is double geared, has turned rollers and bearings, is very strong and durable, will bend 5-inch tire, or smaller, to a circle 24 inches in diameter, or larger.

In bending very heavy tires, two cranks may be used on opposite sides, thus giving double power.

With one crank. ....\$10.50

With pulley for power. .... 16.00

Fig. 4093. No. 1

Fig. 4093. No. 1 is made with turned rollers and bearings and will bend 3 ¼-inch tire, or smaller, to a circle 24 inches in diameter, or larger.

With crank. ....\$6.00

Fig. 4094

## BOILERMAKERS' PUNCHES

Style 8 1/2

Fig. 1A Handy Punch

Three punches and dies and a lever bar go with each machine.

Style	Throat inch	Will Punch	Price, each
8 1/2	5	3/8 in. hole in 3/8 in. plate	\$ 38.00
28	10	3/8 in. hole in 3/8 in. plate	64.00
29	15	3/8 in. hole in 3/8 in. plate	87.00
31	18	3/8 in. hole in 3/8 in. plate	118.00

## Style 1A—Handy Punch

Will punch 1/4 inch hole in 1/4 inch plate and will punch to the center of 5 inch circle. List price each \$13.75.

FORGED STEEL SCREW PUNCH  
WITH RATCHET ATTACH-  
MENT

The Ratchet Wrench, Fig. No. 3 is the latest and most economical tool for boiler-makers' use. The handle is made proper size to fit inside 2 1/2-inch pipe for extension of handle.

Fig. No. 2 shows Ratchet Head Screw. Fig. No. 1 Bar Head Screw. Fig. No. 4 Drill Socket to be used with Ratchet Wrench for drilling.

The Ratchet Wrench fits all sizes and kinds of screw punches made by us.

No. 1 punches 1/2-in. holes in 1/2-in. iron, 1 1/2 in. from edge; weighs 20 lbs. ....each \$16.00

No. 2 punches 3/4 in. hole in 5/8 in. iron, 2 1/2 in. from edge; weighs 48 lbs. ....each 25.00

No. 3 punches 3/4-in. hole in 3/4-in. iron, 3 1/4 in. from edge; weighs 70 lbs. ....each \$32.00

No. 4 punches 3/4-in. hole in 3/4-in. iron, 4 in. from edge; weighs 100 lbs. ....each 40.00

One punch and die furnished with each machine. When ordering specify size of hole to be punched.

Extra Punches and Dies, No. 1. ....per set \$2.00

## SHEARS AND PUNCHES

Fig. 56A  
Stake Riveter and Punch  
Length of Stake 36 in.

The left hand cut above illustrates our standard Combined Stake Riveter and Punch with single head. All our machines of this style are equipped with adjustable automatic stops which enable the operator to bring the punch to a stop at any point of stroke. All rivets are put in from the top. An automatic hold up clamps the sheets before the rivet is headed.

(One punching and one riveting attachment is furnished with wrenches and strippers is furnished with each machine. The stake and main eccentric shaft are carbon steel forgings.

## Fig. 56A SIZES AND CAPACITIES

Length of Stake	Diam. of Stake	Riveting Capacity	Punching Capacity	R. P. M.	H. P.	Weight	Price	Weight Crated
8	6	$\frac{1}{4}$	$\frac{3}{8} \times \frac{3}{8}$	80 to 100	2	2850	\$338.00	3350

Punch and Shear

Fig. 6  
Hand Power Combined  
Punch and Shear

## BAR CUTTERS, PUNCHES AND SHEARS

Cut twisted or straight bars, angles, flats, tees and special shapes.  
Have twice the capacity of cast iron machines of the same weight.

Fig. 10

Fig. 2B

Fig. 4

Fig. 5

## Fig. 10. CONTRACTOR'S BAR CUTTER

For cutting concrete reinforcing bars. Cuts round or twisted high carbon steel bars. Machine weighs only 300 lbs., yet is stronger and of equal capacity to cast iron machines of twice the weight. It is therefore very desirable on scaffolding because it can be easily moved about. The frame consists of two heavy plates of "Armor-Plate" steel, of 75,000 lbs. tensile strength, rigidly bolted and riveted together, enclosing the working parts. Stripper on side prevents binding of the metal, and the roller prevents bars from dulling the knives. A treadle is provided for dropping the segment back into place after each cutting operation.

Two sets of knives are furnished, for cutting light, medium and heavy bars.

No.	Type	Cuts Twisted Squares	Cuts Rounds	Shipping Weight	List Prices
10	Legs	up to 1"	up to 1 1/4"	315 lbs.	\$ 85.00
10A	Wheels attached to legs	" " 1"	" " 1 1/4"	340 lbs.	100.00
10B	Without legs	" " 1"	" " 1 1/4"	254 lbs.	90.00
11	Legs	" " 1 1/4"	" " 1 3/4"	500 lbs.	190.00
11A	Wheels attached to legs	" " 1 1/4"	" " 1 3/4"	525 lbs.	200.00
11B	Without legs	" " 1 1/4"	" " 1 3/4"	439 lbs.	180.00

## Fig. 2B. COMBINATION "ARMOR-PLATE" PUNCHES AND SHEARS

Frame is of "Armor-Plate" steel, having a tensile strength of 75,000 lbs.—over seven times stronger than cast iron. Strippers are adjustable to prevent binding of the stock when cutter leaves metal. A twin-socket lever operating both punch and shears, is worked from one side; its powerful leverage makes operation easy on all work.

No.	Punches	Cuts Rounds	Cuts Flats	Punches Furnished	Depth Throat	Shipping Weights	List Prices

4C	Cast Iron Stand	3x3/4"	1"	250 lbs.	75.00

## Fig. 5. "ARMOR-PLATE" BAR CUTTER

By changing links, one, two or three teeth of the ratchet wheel can be engaged at one stroke of the lever, according to size of material to be cut. The main frame consists of two heavy "Armor-Plates," rigidly bolted together. The plunger crankshaft, upon which the ratchet wheel is pressed, moves in flange bearings bolted to the two frame plates.

Machine is furnished with stripper, adjustable to the thickness of material to be cut. Only one pair of knives may be for any one of the five following shapes or combinations:

Squares and rounds—combination knives. Twisted bar only. Flats and angles—combination knives. Tee bars only. Channels and beams—capacities on application. One pair of knives required for each size.

Please specify which of these knives are wanted.

No.	One Set of Knives for Both		One Set of Knives	One Set of Knives for Both		One Set of Knives	Weight lbs.	List Prices

## "VULCAN" ANVILS

The face of this anvil is one solid piece of tool steel, thoroughly welded to the body of the anvil by a patented process. It is then accurately ground and tempered.

The horn is covered with, and its extremity is made entirely of tough, untempered steel.

The body of the anvil is made from superior pig iron, and being much more solid than wrought iron, the work being forged receives the full force of the blow. The face and horn of the anvil are warranted to be thoroughly welded to the body and not to separate.

### THE DOUBLE-JAW DRILLING POST

Fig. 531J

No. 1 is suitable for drilling all size holes up to  $\frac{3}{4}$  inch. Radius of arm 10 inches, weight 25 pounds.

No. 2 is extra strong. Post is long enough to take No. 5 ratchet and drill up to  $1\frac{1}{2}$  inch hole. Radius of arm 12 inches, weight 33 pounds.

The jaws of both sizes open 4 inches. Can be made special to open any distance. The screws are made of tool steel and tempered. The screw in the lower jaw has a cup-shaped head, a guide and seat for top screw. The screws can be reversed.

No. 1.....each, \$ 8.00

No. 2....." 10.00

FOR RIVETS, STRUCTURAL SHAPES AND BARS, SEE INDEX

## COLD AND TRACK CHISELS AND PUNCHES

All good quality cold chisels look alike as far as the quality of the steel is concerned, but all chisels do not act alike when in the hands of the workman. No tool is given such hard usage as a cold chisel and usually they are not made better than need be.

To make good chisels care must be given to the quality of the steel, the process by which forged, the shaping and tempering.

In these chisels a high grade of crucible steel is used, forged-up by the use of a hammer, and shaped and tempered properly. Chisels are oil finished, with turned heads.

## COLD CHISELS

## First Quality

## CONNEAUT SPECIAL SHOVELS

Hand Pounded and Tempered

Fig. 1  
Ore and Concrete

## RONBERG ORE AND CONCRETE SHOVELS

MIKKOLA'S FAMOUS PATENT

Fig. 1 to 5 and X1 to X5

The best square point shovel for any work but tamping railroad ties. Regular 26 inch D handle with 19 inch drop. Drop tempered point Annealed blade. Long handle 4½ feet, 30 inch drop.

This is the shovel that will not wedge the material in the blade, is self-sharpening, is used by the majority of construction companies for concrete, and by brick companies for sand, shale and clay shoveling. It is lighter than other makes of same size, yet holds more material, wears longer, and is liked better by the men. Not manufactured in solid back.

No.	Size of Blade		D Handle Fig. No.	Long Handle Fig. No.	Price per doz.

Concrete

## MAGYAR COAL SHOVELS—STREET COMMISSIONERS' SHOVELS

Fig. 11 to 18

This shovel is used extensively by the lime companies for filling purposes. Its straight point will not crush the material handled as the high-sided scoop does, and the drop and straight point cleans the entire width of blade, as it is shovelled in. Regular D handle, 26 inches long with 20 inch drop; long handle, 4 feet, 6 inches. Any length of handle furnished on request. The street commissioners' shovels are also used as firing shovels. They are 4 feet 6 inches long and have a 30 inch drop.

No.	Size of Blade		Coal Shovel Fig. No.	Street Commissioner Shovel, Fig. No.	Price per doz.

## CARPENTER'S BANNISTER SPECIAL CONCRETE SPADE

Fig. D30. Side View

Fig. D30A. Front View.

Hand Pounded and Tempered

Size of blade, 12 inches long, 8 inches wide.

Designed for forcing the concrete back from the forms and allowing the thin mixture to run out against the forms. It is the only spade that will not clog up and become unfit for use if neglected, as the concrete will not stick to it as it does to some others, and for this reason any laborer can use it and get just as good results as a skilled man, and it is not as expensive as others. Designed by one of the most practical concrete men in the world.

FOR OTHER KINDS OF HANDLES, SEE INDEX

## HANDLES

Our Handles are manufactured from selected material, thoroughly finished and carefully assorted. They are the standard grade of the market. All Handles are exceptionally well finished with a hard gloss finish, and are packed one dozen in a bundle.

## CHUCKING AND BORING

Unless otherwise specified, all fork, rake and hoe handles will be bored and chucked. We can, however, furnish handles not bored if desired, if you will so state on your order.

Where weights are shown, they cover handles tied and ready for shipment. Considering the wide range of sizes, grades and other details, these figures are of necessity, an estimate only. They are not guaranteed, but are sufficiently accurate for use as a basis of estimate.

## HANDLES

All our extra grade handles are made from selected young second growth hickory, the toughest wood known for handles of all kinds. All handles are pure white in color and are absolutely free from knots or branch joints.

Number 1 handles are also made of hickory, but are not so clear in color, there being more or less red in them, due to branch joints.

We also carry Pick handles, made from ash for those who specially require them of this wood.

## SCREENS—RIDDLES—CHUTES

For Screening Coal, Coke, Gravel, etc. Oak Frame

No.	Size Inches	Wgt. lbs.	Each	No.	Size Inches	Wgt. lbs.	Each
19	34x76	101	\$15.00	1	34x81	118	\$17.25
20	31x69	86	12.00	2	31x74	106	14.25

## No. 26. SAND SCREEN

No small wires are used to wear out quickly, leaving the screening surface loose and uneven. The frames are not weakened by numerous holes bored to receive the ends of the wires. The surface is perfectly even, so that sand is not retarded in its downward course. The wires cannot be displaced to form irregular openings. The screen is constructed so the wear will be borne proportionately on all parts.

	Size, In.	Wgt. lbs.	Each
Small	22x60	35	\$6.00
Large	26x66	42	7.50

Furnished without the extension handles for forward dumping. Weight 58 lbs. each.  
 No. 26B-4 ..... per doz. \$61.00

Fig. 31

The legs and braces are made of angle iron, which gives strength and durability and makes it the best **Pan Tray Barrow** on the market. The handles are  $1\frac{1}{2} \times 2\frac{1}{4} \times 60$  inches long. Equipped without No. 4 "Never Break" wheel. Capacity 4 cubic feet. Weight 60 lbs. each. Painted brown.  
 No. 31 ..... per doz. \$62.00

Fig. 42

**Especially Recommended for Concrete.** Equipped with **Angle Iron** wheel guard loop, which strengthens the frame and permits of forward dumping. Note the angle iron ribs underneath the tray, which elevates the front end of tray so that in wheeling, the tray stands level, preventing the load from slushing over in the front. Equipped with angle iron cross pieces. No. 8 "Never Break" Wheel. Capacity 4 cubic feet. Weight 65 lbs. each.  
 No. 42 ..... per doz. \$76.00

Fig. 54

**Especially Recommended for Mortar.** Equipped with **Angle Iron** wheel guard loop, which permits load to be dumped forward over wheel. Furnished with No. 8 Wheel. Size of tray, top 24 inches wide by 36 inches long, depth at handles 8 inches, at wheel 14 inches. Weight 72 lbs. Capacity 4 cubic feet.  
 No. 54 ..... per doz. \$76.00

Fig. 43

**Concrete Barrow.** Furnished with extension handles, tipped with sheet steel in place of angle wheel guard loop. Furnished with No. 8 "Never Break" Wheel. Capacity 4 cubic feet. Weight 63 lbs. each.  
 No. 43 ..... per doz. \$73.00

Fig. 44

**Concrete Barrow.** It is minus the wheel guard length of handles. Handles  $1\frac{1}{2} \times 2\frac{1}{4} \times 60$  inches long. No. 8 "Never Break" Wheel furnished. Weight 62 lbs. each.  
 No. 44 ..... per doz. \$71.00

# WHEELBARROWS

## BULL FROG

Fig. 55

Furnished with wheel guard length of handles, without angle iron wheel guard. Furnished with No. 8 Wheel. Weight 70 lbs. Capacity 4 cubic feet.

No. 55. Per doz.....\$73.00

Fig. 56

It is minus the wheel guard. Handles  $1\frac{1}{2} \times 2\frac{1}{2} \times 60$  inches. Furnished with No. 8 wheel. Weight 68 lbs. each.

No. 56. Per doz.....\$71.00

Fig. 60

Has No. 8 "Never Break Wheel." Equipped with "ANGLE IRON" risers, elevating the tray to prevent slushing over in front. It is equipped with "ANGLE IRON" wheel guard loop. Tray 24 inches wide by 36 inches long, depth at handles 8 inches, at wheel 14 inches. Weight 75 lbs. each.

No. 60. Per doz.....\$82.00

Fig. 62

Has No. 8 "Never Break Wheel." It is minus the "Angle Iron" wheel guard. Weight 74 lbs. each.

No. 62. Per doz.....\$78.00

Fig. 80

This barrow is designed to take the place of the common wood tray barrow. Tray is made of a single sheet of 16 gauge steel, riveted and shaped like a common wood tray. Weight per dozen, 600 lbs.

No. 80. Per doz.....\$56.00

Fig. 75

Made of heavy angle iron, so formed that the handles, legs and wheel guard are made in one piece. Two pieces of angle iron are bolted along the bottom of the tray which supports the bottom, making the tray and frame absolutely rigid and practically indestructible. The tray is made of 14 gauge steel, the upper edge of which is beaded around a  $\frac{5}{16}$  inch iron rod. Width of bottom at wheel 20 inches, width of bottom at handle 20 inches, height of tray at wheel 4 inches, height of tray at handle 18 inches, length of tray at top 39 inches. No. 12 "NEVER BREAK" wheel. Capacity 5 cubic feet. Weight 100 lbs. Painted brown.

No. 75. Per doz.....\$168.00

Fig. 10

Notice the Wheel under the load  
The handles are made of inch tubing bent around in front of the wheel, which permits of forward dumping. The trays are stamped out of one piece of steel, the top edge beaded.

## WHEELBARROWS

Fig. 12

No. 12. Buckeye Railway Barrow. Natural finished hardwood frame, braced and half bolted, length over all, 62 inches;  $1\frac{1}{2}$  x 2 inch handles, 56 inches long; regular pieced tray, 29 inches long, 34 inches wide, 10 inches deep in front, 8 inches at rear. 16 inch steel wheel with  $9\frac{1}{2}$  inch loose bolt axle; weight per dozen, 480 lbs.

Per doz. .... \$30.00

Fig. 14

No. 14. Full Bolted Barrow. Natural finish hardwood frame, well braced and full bolted, legs extended upward thus bracing the tray and bolted to same. Full size tray, 10 inches deep at handles, 8 inches at the wheel, 34 inches wide, 29 inches long on top, cleated and strapped; handles 60 inches long,  $1\frac{3}{4}$  x  $2\frac{1}{4}$  inch; wheel 16 inch diameter, tire  $1\frac{1}{2}$  x  $\frac{1}{8}$  inch; weight per dozen, 560 lbs.

Per doz. .... \$37.00

Fig. 16

No. 16. Toledo. Natural finished hardwood bolted frame, stave tray, 33 inches long, 27 inches wide, 7 inches deep, staves held by two steel bolt rods passing clear through each stave;  $1\frac{1}{2}$  x 2 inch handles 56 inches long; 16 inch steel wheel,  $\frac{7}{8}$  x  $9\frac{1}{2}$  inch loose bolt axle,  $1\frac{1}{4}$  inch tire; length over all, 62 inches; weight per dozen, 500 lbs.

Per doz. .... \$30.00

Fig. 7

No. 7. Garden Barrow. Hardwood handles and body, painted red and varnished, bent angle steel legs, with angle steel sockets for side boards. Handles,  $1\frac{1}{2}$  x  $2\frac{1}{2}$  x 56 inches; bed length inside, 28 inches, width at the handles,  $20\frac{1}{2}$  inches, width at the wheels, 16 inches, side boards,  $\frac{5}{8}$  x  $11\frac{1}{2}$  x 31 inches; wheel, 20 inches in diameter,  $1\frac{1}{2}$  x  $\frac{1}{4}$  inch tire,  $\frac{5}{8}$  inch axle; weight per dozen, 600 lbs.

Per doz. .... \$53.00

Fig. 17

No. 17. Box Barrow. Natural finish hardwood frame and box tray; half bolted; tray,  $27\frac{1}{2}$  inches long,  $25\frac{1}{2}$  inches wide, front board 10 inches, back 6 inches, nailed and strapped;  $1\frac{1}{2}$  x 2 inch handles, 56 inches long; 16 inch steel wheel,  $\frac{7}{8}$  x  $9\frac{1}{2}$  inch loose bolt axle; length over all, 62 inches; weight per dozen, 600 lbs.

Per doz. .... \$30.00

Fig. 6 1/2

No. 6 1/2. Straight Leg Garden Barrow. Hardwood body; handles, legs and braces painted red, and varnished; wheel painted black. Bed length, inside 28 inches, width at handles,  $20\frac{1}{2}$  inches, width at wheel  $16\frac{1}{2}$  inches, side boards,  $11\frac{1}{2}$  x 31 inches; "Never Break" steel wheel with rivetless hub, diameter 20 inches, tire  $1\frac{1}{2}$  x  $\frac{1}{4}$  inches; weight per dozen, 600 lbs.

Per doz. .... \$48.00

Fig. 52 S. C.

No. 52. Special Coal Barrow for dumping to windows or other openings; should have one on every coal wagon; strongly built. Dimensions of tray: Length on top 44 inches, width on top at wheel 22 inches, width on top at handles 25 inches, width on top at center 27 inches, depth at handles 9 inches, depth at center 15 inches. Capacity 350 lbs. hard coal, 500 lbs. soft coal.  
Price, each.....\$12.00

Fig. 25 S. C.

No. 25. Special Coal Barrow with wood handles and angle steel truss frame. Dimensions of tray: Length on top 42 inches, width on top at wheel 27 inches, width on top at handles 25 inches, width on top at center 25 inches, depth at handles 8 inches, depth at center 12 inches. Capacity 300 lbs. hard coal, 250 lbs. soft coal.  
Price, each.....\$10.50

Fig. 25 C. O.

## TWO WHEEL COAL AND ORE BARROW

Tubular handles, curved up in front and bolted to the tray. Legs,  $\frac{5}{8} \times 1\frac{1}{2}$  iron cross braced with  $5/16 \times 1\frac{1}{2}$  iron. Axle,  $1\frac{1}{2}$  inches square. Tray size, bottom  $21 \times 20\frac{1}{2}$  inches, top measure 40 inches at the wheel, 31 inches inside at handles, and 44 inches long, sides and back made of 12 gauge steel; bottom and front of 10 gauge steel. Wheels, 20 inches in diameter,  $14\frac{1}{2}$  inches round staggered spokes, heavy cast hub; tire,  $\frac{3}{8} \times 2\frac{1}{2}$ ; bore  $1\frac{1}{4}$  inch. Capacity, 10 cubic feet. Weight 275 lbs. Painted brown.  
Price, each.....\$40.00

Fig. 1

## "BULL FROG" CONCRETE CARTS

Strongest Concrete Cart on the market. Capacity 5 cubic feet wet concrete. Length over all 51 inches, width 36 inches. Tray, 14 gauge, reinforced with angle iron entirely around the bottom and top edge. Length 36 inches, width 21 inches, depth 16 inches. Wheels 36 inches in diameter, tire  $\frac{3}{8} \times 2\frac{1}{2}$  inches,  $14\frac{1}{2}$ -inch round spokes, cast iron hubs,  $1\frac{1}{4}$  inch axle.  
No. 1. Weight 200 lbs. Each.....\$28.00

### No. 2

Tray, 14 gauge, reinforced with angle iron entirely around the bottom and top edge. Length 39 inches, width 21 inches, depth 20 inches. Capacity 6 cubic feet wet concrete. Length over all 54 inches, width 36 inches. Wheels 44 inches in diameter,  $\frac{3}{8} \times 2\frac{1}{2}$  inch tire,  $16\frac{1}{2}$ -inch round spokes, cast iron hubs, 2 inch axle.  
No. 2. Weight 225 lbs. Price, each.....\$36.00

FOR REPAIRS ON ALL ABOVE BARROWS AND CARTS, SEE INDEX

Fig. 010

## TUBULAR FRAME BARROWS

This Barrow is especially constructed for use in machine shops, mines, foundries and iron mills. The frame is made of inch tubing bent so as to form the legs and handles which are joined together by heavy iron straps bolted to the bottom of the tray. The tray is stamped out of one sheet of heavy gauge steel, which makes it especially adapted for handling heavy castings, sharp castings, hot iron, etc. This barrow is heavily braced in front, which prevents the tray from pushing forward on the wheel. Our No. 8 "NEVER BREAK" wheel is furnished with this barrow unless otherwise specified.

## Table of Dimensions and Prices

No.	Ga. Steel	Length in.	Width in.	Depth in.	Cap'ty cu. ft.	Wt.	Price each
010	10	33 $\frac{1}{2}$	22 $\frac{1}{2}$	11	3	100	\$9.00
012	12	33 $\frac{1}{2}$	22 $\frac{1}{2}$	11	3	85	8.40

All the above with malleable iron shoes to protect legs.

Fig. 3

This Cart is constructed so that by releasing a strong spring clip the tray dumps, the handles and legs remaining stationary, preventing the cart from running back on the man handling the cart. Capacity 5 cubic feet wet concrete. Length over all 51 inches, width 36 inches. Tray, 14 gauge, reinforced with angle iron entirely around the bottom and top edge. Width 21 inches, length 36 inches, depth 16 inches. Wheels 36 inches in diameter, tire  $\frac{3}{8} \times 2\frac{1}{2}$  inches, spokes  $14\frac{1}{2}$ -inch round. Cast iron hubs and malleable axle  $1\frac{1}{4}$  inch.  
No. 3. Weight 210 lbs. Price, each.....\$34.00

## PRESSED STEEL SCRAPERS

Top View of Scraper

Scraper with Runners

Scraper with Double Bottom

## DRAG SCRAPERS

**The Bowl** is pressed from a single sheet of high carbon special rolled scraper steel, and is without lap or seam, will scour perfectly in any kind of soil, and offers no obstruction to the dirt as it enters or leaves the bowl.

**The Sides** at the front are not sheared off, but are carried up on a line with the top, which prevents the dirt from spilling on the haul, keeps the run way smooth and avoids unnecessary wear on the point upon return from the dump.

**The Flange** stiffens the bowl, in fact is equal to binding same around the top with angle iron, and is an advantage the buyer will readily appreciate.

**The Bail** is made of solid forged steel, strong and durable enough to withstand the greatest strain. **The Swivel** is of malleable iron which turns freely in reinforced socket, permitting a side dump if desired.

**The Hooks and Handle Sockets** are of heavy steel securely riveted and spot welded in place.

**The Runners** of special hardened steel, fastened to the bottom with spot weld or countersunk rivets.

**The Extra Bottom Plate** is also attached to the bottom by countersunk rivets, and is used on all double bottom scrapers.

**The Handles** are made of best quality hard wood.

Be sure to give general description in ordering.

Made under three different brands, as follows:

**"BULL FROG"**

With flat handles on side.

**"MAUMEE"**

With round handles on top.

**"BUCKEYE"**

With round handles on side.

### ROOTER Malleable Iron

Fig. 5772

Unequaled for tearing up macadamized pavements, cement, gravel, hard pan or frozen ground. The beam, shoe and clamps, which embrace the solid steel points, are of the best grade of malleable iron. The shoe is case hardened. Weight with one point, 275 lbs.

Each .....\$34.00

### THE "NOXEMAL" ROOTER Steel

Beam and standard made of machine steel. Shoe made of the best cast steel, into which the solid steel point is inserted without the use of tools and is held without the use of bolts. To detach same, strike rear end with hammer. Each Rooter is supplied with a steel depth regulating gauge. One extra point furnished without charge. Weight 275 lbs.

Each .....\$38.00

Fig. 5773

### WROUGHT STEEL BEAM GRADER PLOW

Fig. 5773

This is a heavy, strongly made plow, especially designed for road building. The beam made of two pieces of steel  $\frac{5}{8}$ -inch thick by 3 inches wide. Is made for strength and will stand the strain. It is next to impossible to break either the beam or mouldboard. This plow fills a long-felt want among graders in cities and contractors doing road work. Weight complete, 175 lbs. No extra point furnished with this plow. Wrench only.

With cast mouldboard, chilled point and clevis. Each.....\$24.00

With cast mouldboard and forged steel point complete. Each..... 27.00

## THE DOAN DITCHING SCRAPER

Fig. 5791

The Doan Scraper is a great favorite among contractors for cleaning out and back filling ditches, and leveling roads and uneven places.

It is well made of seasoned hard wood. The bit is made of special steel, 48 inches long,  $\frac{1}{4}$  inch thick and 7 inches wide, which is 2 inches wider than those usually made. The scrapers are well ironed and bolted, and the hounds are made of  $1\frac{3}{4} \times \frac{5}{8}$  inch steel, with  $\frac{3}{8}$  inch cable chain.

Width 48 inches, wt. 75 lbs. . . . . each \$7.50

## WESTERN WHEELED SCRAPERS

## No. 1 WESTERN WHEELED SCRAPER

Wheels are made from selected stock, 36 inches high; tires,  $2\frac{1}{2} \times \frac{1}{4}$  inch; axle,  $1\frac{1}{2}$  inches square; bowl, 3 feet wide, 3 feet long, 12 inches deep; draft hooks, automatic, patented, prevents the scraper from dumping while being filled, and regulates the cut to even depth.

Fig. 5792

No.1 Wheeler. Capacity 9 cubic feet, weight 340 lbs. . . . . each \$45.00  
Automatic End Gates for above, extra. . . . . " 5.00  
Whiffletrees and neckyokes, extra.

## No. 2 WESTERN WHEELED SCRAPER

Fig. 5793

Wheels made from selected stock, 40 inches high; tires,  $3 \times \frac{3}{8}$  inch; axle,  $1\frac{1}{2}$  inches square, arched  $3\frac{1}{2}$  inches higher than the old standard Wheelers were; ball is of an entirely new pattern, is bent around on a line with the top edge of the pan and supported by the lever, which is arched (see cut) and extends forward and is firmly attached to the axle, giving abundant clearance for the dirt in filling and dumping; bowl, 3 feet 2 inches wide, 3 feet 1 inch long,  $13\frac{1}{2}$  inches deep; draft hooks, patent, automatic, prevents scraper from dumping while being filled, and regulates the cut to even depth.

No. 2 Wheeler. Capacity 12 cubic feet, weight 600 lbs. . . . . each \$50.00  
Draft Rods for above, extra. . . . . " 2.00  
Automatic End Gates for above, extra. . . . . " 5.00  
Whiffletrees and neckyokes, extra.

## SCRAPERS

TONGUE SCRAPER, LEVELER AND  
DITCHER

This is an excellent Scraper for cutting and cleaning ditches and moving large quantities of earth rapidly when the distance is not too great. The drawbars and bit are made of the best quality of steel. It is well ironed and made of well-seasoned hard wood. The driver can fill and dump it with ease.

No.	Width inches	Weight pounds	Each
1	48	135	\$10.50
2	42	120	10.00

Fig. 2

Fig. 122

Fig. 122A

## BUCK SCRAPERS—FRESNO TYPE

A very popular type Scraper. Is much used in railroad construction work, for irrigation leveling and road building. Will do any kind of work usually done by drag and wheeled scrapers. Capacity ranges from 12 to 18 cubic feet, depending on size.

A distinctive feature in this scraper is an arrangement of bars with adjustable clevises which regulates the load distribution. These permit the distribution in uniform layers ranging from 1 inch to 12 inches, or deposit in bulk.

**Built to Wear**—Made of carbon steel with wrought iron rods, hardwood drawbar, cross-braces and handle. Top edge of body plate reinforced with strong angle along its entire length.

No. 1.	Capacity 18 cubic feet; cutting edge 5 feet; wt. about 315 lbs.	Each	\$26.00
No. 2.	Capacity 14 cubic feet; cutting edge 4 feet; wt. about 250 lbs.	"	24.80
No. 3.	Capacity 12 cubic feet; cutting edge 3½ feet; wt. about 340 lbs.	"	24.00

## SQUARE BACK ALL STEEL DRAG SCRAPERS

This Scraper is cold pressed from a single sheet of high carbon scraper steel. The back is square and the bottom sufficiently rounded to reduce friction. The sides are high, assuring rated capacity. Corner laps and runners are electrically welded. Heavy steel bale and hooks. Malleable iron swivel and sockets.

No. 1 is the largest size and adapted to long hauls. No. 2 is the size in most general use.

No. 3 is the size intended for high banks and ditches.

No.		Capacity Cu. Ft.	Price Each
1	Without Runners . . . .	7	\$8.88
2	Without Runners . . . .	5	8.20
3	Without Runners . . . .	3	7.80
1	With Runners . . . . .	7	9.20
2	With Runners . . . . .	5	8.60
3	With Runners . . . . .	3	8.20

Fig. 3 with Runners

Scrapers WITH RUNNERS will always be shipped unless otherwise specified.

## BRIGGS-CHICAGO CONCRETE CARTS

## WATER-TIGHT TIPOVER

Fig. 578

You can store materials at street intersections while you are grading. Most experienced paving contractors consider this the greatest advantage of the Cart System. It saves all interruptions in receiving and delays in waiting for materials. In many cases they can be piled upon paved intersecting streets. This means easier shoveling. Materials can be purchased, hauled and placed when most convenient, without regard to grading.

The Briggs-Chicago Cart System keeps the mixer in continuous, uninterrupted operation at one "setting" from one to two days at a time. By eliminating the delays of frequent moving, you increase the efficiency of your mixing gang and secure greater yardage from your mixer.

Four or five carts will haul and distribute the mixed concrete economically a distance of 400 to 500 feet in both directions from the mixer. Each cart holds the full mixer batch—twenty cubic feet—the equivalent of four or five surface yards. Discharging full batches saves delays at the mixer. For rapid, continuous, economical distribution of mixed concrete over street surfaces, no other system comes within range of Briggs-Chicago Spreaders. They deliver the mixture on the grade in the uniform thickness desired—with the mortar on top—requiring less additional labor for spreading and finishing than with any other method.

The finished grade is kept free and clear of materials and obstructions at all times. Briggs-Chicago Carts have large, wide-tired wheels which do not cut up the sub-grade. They act as rollers. You can lay concrete with these carts in wet weather when not possible with other methods.

## GENERAL FEATURES

Holds the full mixed batch of the ordinary paving mixer—twenty cubic feet. Equipped with 54 inch diameter steel wheels, with 6 inch tires. Weight 1050 pounds with roller-bearing wheels. Easily drawn by one horse. Cart and horse can be turned in a 12 foot space. Clearance required under mixer discharge chute, 39 inches. The Tipover Cart dumps over backwards, and its rear-end discharge is especially adapted for delivering concrete into car tracks. The smooth, clean inner surface of the cart body, the corners of which are rounded to a 3 inch radius, prevents concrete from sticking. It is absolutely water-tight and practically self-cleaning.

## DETAILED SPECIFICATIONS

**Capacity**—Made only in one size designated as a  $\frac{3}{4}$  yard cart, holding 20 cubic feet of mixed concrete level full, easily drawn by one horse.

**Weight**—With plain steel wheels, 1040 lbs.; with steel roller-bearing wheels, 1050 lbs.; with wood wheels, 940 lbs.

**Height**—To top of body (mixer discharge chute clearance): With steel wheels, 39 inches; with wood wheels, 36 inches.

**Length**—Over all, 11 feet 3 inches. Cart with horse turns in 12 foot space.

**Width**—With plain steel wheels, 6 feet 3 inches over all; with steel roller-bearing wheels, 6 feet 6 inches; with wood wheels, 6 feet 5 inches.

**Wheels**—Steel, 54 inch diameter, 6 inch tires. Furnished either plain or with roller-bearings. Roller-bearing wheels recommended; they reduce

draft 20 per cent; bearings are renewable. Tread, with R-B wheels, 64 $\frac{1}{2}$  inches; with plain wheels, 65 $\frac{1}{2}$  inches. The Tipover Cart is also furnished, if preferred, with wood wheels, 48 inch diameter, 4 inch tires. Tread, 64 inches.

**Shafts**—For one horse; made of channels, strongly reinforced where attached to cart body. Ends of shafts rounded to protect horses.

**Cart Body**—Made of No. 12 steel plate, in only three pieces. Corners rounded to a 3 inch radius, giving a smooth, clean inside surface. Outside of body fitted with three wide "hammering bands." Top sides of body fitted with steel "slop shields."

Body turns completely upside down in discharging, tripped by hand lever near center of right cart shaft. Road clearance, 14 $\frac{1}{2}$  inches. Absolutely water-tight and practically self-cleaning.

## DUMP WAGONS

The patent under-draft attachment on this wagon does entirely away with whipping of the tongue, draws the load direct from the axle, which gives from one-third to one-half easier draft and saves horse-flesh and wear and tear on wagon and harness.

The dumping operation is so simple and so easily done that a small boy can dump the load and wind up the doors perfectly.

To dump the load lift the dog and push the lever forward.

But one lever is used for closing the doors and dumping the load.

Because of the large drum on which the chain is wound, it is necessary to move the lever forward and back only a few times. Only one chain is used.

It is impossible to dump the load by accident.

The **Shaft and Drum** are placed across the front end of wagon. This distributes the strain and prevents the right-hand front corner from sagging.

The **Doors** are hung by heavy loops, instead of rigid hinges. This allows them to be raised about eight inches and prevents them from being torn off when moving forward after dumping. The doors close almost water-tight.

The **Steel Axles** are reinforced by heavy hickory bed pieces, securely clipped on, which strengthens the axles and prevents springing or breaking. No malleable iron standard space used by us.

The **Neck** is reinforced by a plate of sheet steel, both inside and outside, running back to the forward side trap.

As nearly all of the metal parts are wrought iron or steel, any blacksmith can make repairs, and there is no annoyance of waiting for malleable parts to come from the factory.

The **Wheels** are made with oak hubs, oak rims and oak or hickory spokes.

All **Tires and Bands** set by hydraulic pressure, which insures their being as round and true as a pulley and absolutely tight.

## SPECIFICATIONS

The Gabriel Streich Dump Wagon is made in four sizes, with capacities of  $1\frac{1}{2}$ , 2,  $2\frac{1}{2}$  and 3 yards. The first two sizes have 2 inch front and  $2\frac{1}{4}$  inch rear axles. The two larger sizes have 2 inch front and  $2\frac{1}{2}$  inch rear axles. The tires are made of round edge steel, 3 inches wide and  $\frac{5}{8}$ ,  $\frac{3}{4}$  or  $\frac{7}{8}$  inches thick on the smaller wagons, and 4 inches wide and  $\frac{5}{8}$  and  $\frac{3}{4}$  inch thick on the larger sizes.

The front wheels are 3 feet 4 inches high and the rear wheels 4 feet 4 inches high. The weights are 1900, 2200, 2300 and 2450 pounds respectively for the four capacities.

## SMITH MIXERS

DUO-CONE DRUM—TILTING DISCHARGE

Fig. 1

## COMBINES LOADER AND ELEVATOR

Secure the MINIMUM LOADING COST by using a Smith Mixer equipped with a Smith vertical acting, non-pivoted, extensible power loader, Fig 1. Extend your loader frame downward two feet or twenty feet. The Omaha Water Board mounted their Smith Mixers way up in the air and extended their loader frames so as to load from the ground 39 feet below. This adaptability of their Smith Mixers saved them the cost of hoisting engines, towers and chuting systems.

Fig. 2

Fig. 3

SMITH MIXERS are built in ten sizes, ranging from the FOUR FOOT Smith Mascot shown in Fig. 2 to the colossal FOUR YARD machine shown in Fig. 3. They are furnished with steam, gasoline or motor drive, and can be equipped with power loader, gated batch hopper or standard feed chute.

Write for Prices. Send for Special Smith Mixer Catalog  
We Can Furnish Mixers from \$125.00 to \$5,000.00

Fig. 4

Smith-Chicago Mixers combine RAPID MIXING and FAST DISCHARGE with absolutely NO SPLASHING.

The deep blades with their long sloping sides produce a constant reciprocating motion—the end-to-center mixing action that makes perfectly mixed concrete.

The concaved drip ring allows the long, steep chute to swing way into the drum, thus insuring a fast clean discharge.

Smith-Chicago mixers are built in ten sizes. The smallest the Smith Mixerette shown in Fig. 7 holds three cubic feet of wet, mixed concrete. The largest holds 81 cubic feet. They are furnished with steam or gasoline engines or motors. The variety of loading methods adapts these machines for any class of work.

The power loader shown in Figs. 4 and 5 is the famous Smith non-pivoted, vertical acting loader with extensible frame. Both the standard feed chute and the gated batch hopper have a low feed level and at the same time the long steep hopper sides insure a rapid flow into the drum.

## SMITH-CHICAGO MIXERS

NON-TILTING TYPE

Fig. 5

Fig. 6

PLATFORM ONLY 16 INCHES HIGH

Look at Fig. 6. Notice how the truck frame is **UNDERSLUNG** so as to obtain the low 16 inch loading level and how the steel goose neck enables you to turn the machine in its own length. These dandy Smith-Chicago Low-Chargers are built in four sizes—the 3 foot Mixerette shown in Fig. 7 and the 4, 6 and 9 foot Smith-Chicagos as shown in Fig. 6.

Fig. 7

## CARPENTER MORTAR MIXER

The mixing paddles in this Mortar Mixer are made on the principle of a perforated mortar hoe and so arranged in the mixing drum that while in the process of mixing the mortar is forced to the open end of the drum where it is controlled by a locking end gate. The water connection consists of a perforated pipe arranged for hose connection.

This outfit is substantially built with channel iron frame mounted on steel wheels. The mixing paddles are strung on a heavy steel mixing shaft in such a way that should one break, it can be replaced by removing two bolts and inserting a new paddle in its place. A friction clutch operated from the discharge end of mixing trough controls the paddle movement and the engine installed in this mixer is of ample power to operate same. This mixer will supply and keep busy from 30 to 40 brick layers.

### SPECIFICATIONS

Truck—5 inch channel iron.	Size of Water Connection— $\frac{1}{2}$ in. pipe.	Net Weight with Engine—2,650 lbs.
Wheels—front 16x4 in., rear 36x4 in.	Overall Length of Outfit—10 ft.	Engine installed in Outfit—5 H. P., hopper cooled.
Axles—2 $\frac{1}{2}$ in. diameter.	Overall Width of Outfit—5 ft., 6 in.	Wood or Steel House.
Paddle Shaft—2 in. square.		
Speed of Paddle—50 R. P. M.		

### COMBINATIONS FURNISHED

With five horsepower, four cycle water hopper cooled gasoline engine installed, the complete equipment mounted on a strong steel truck, wood house, ready to operate when delivered.....	\$600.00

### SMITH BUILDERS' SPECIAL

A dandy outfit for building contractor or silo builder. Consists of Mixerette drum, extra horse power gas engine and single acting friction hoist, all mounted on a substantial standard gauge truck. Engine can be operated independently, with hoist or mixer drum or with both. Equipped with batch hopper, low charging platform or gear lifted loader.

Send for Special Mixerette Folder

## SMITH MIXERETTE

The Smith Mixerette is the ideal mixer for the smaller concrete jobs. It is light and portable, and will turn out a big volume of concrete. Holds 3 cubic feet of wet mixed concrete per batch or 5 cubic yards per hour. Equipped with powerful gas engine enclosed in steel house and a choice of gated batch hopper, low charging platform, only 16 inches high (Fig. 7) or gear lifted loader (Fig. 8). Has the famous Smith Dust Proof casing which protects gear ring and driving pinion.

Fig. 9

SMITH-CHICAGO HIGH-DRUM  
PAVER

## LONG, STEEP, 20° ANGLE SWIVEL CHUTE

Committee VIII of the National Conference on Concrete Road Building endorsed this vital feature on S-C High-Drum Pavers as follows: "We believe, as a result of the tests mentioned, that the *least* angle for the distributing chute should be approximately 20 degrees. . . . It is better to increase the pitch of the chute than to increase the amount of water."

## ACCURATE WATER WEIGHING DEVICE

The same Committee reported that: "A most important item is the amount of water to use. . . . The maximum amount of water should be 6 pounds per cubic foot of loose material. . . . The new high-drum type Smith-Chicago Pavers are all equipped with this device which *measures accurately* every batch of water that goes into the mixer drum. *The Committee proved the above statement.*"

## WIDE, EASILY LOADED THREE-MAN SKIP

The big, wide, easily loaded skip discharges *directly into the drum*—there is no intermediate hopper to retard the flow—and it goes up in only *nine seconds*.

## ABSOLUTE ALIGNMENT

All the hoisting and propelling shafts, gears, brackets and boxes are bunched on a **ONE-PIECE** steel casting supported by a heavy **STEEL** bolster over the big rear axle. Not a single box is fastened to the truck sills—Perfect alignment is assured.

Smith-Chicago High-Drum Pavers are Built in  
Four Sizes, Holding 4, 7, 10 and 16 Cubic  
Feet of Wet Mixed Concrete, Per Batch

THE TEN VITAL FEATURES  
IN THE

## SMITH-CHICAGO HIGH DRUM PAVER

- 1-Long distributing chute with 20° slope
- 2-Positive water weighing device - automatically operated
- 3-Wide easily loaded three man skip
- 4-Water storage tank- 7 batch capacity
- 5-Traction and main driving gears enclosed in steel house, every gear, box, key etc, perfectly accessible. All parts located on single, heavy steel casting over rear axle independent of frame
- 6-Differential gears on all sizes
- 7-Power plant located on center line of mixer-truck. Engine enclosed in steel house
- 8-Boiler door, water gauges, injector, lubricator, throttle valve and all operating levers handled from ground level on one side of machine
- 9-Discharge spout withdrawn from drum automatically
- 10-Mixer drum can be disengaged through clutch when mixer is being moved

## CEMENT AND PLASTER SACK BALER

The Baler has an automatic counting device which is mechanically correct. It makes it possible to accurately count all sacks up to fifty. When fifty sacks have been placed on the table a bell rings. The dial always indicates the number of sacks on the table.

Wire or rope ties may be used with the New Economy Baler. Railroad Companies specify if rope be used that it must be  $\frac{3}{8}$  inch in diameter. Wire is considerably cheaper and may be used to a little better advantage than rope, as it will work faster in bundling. Three distinct ties of wire meet with approval of both cement and railroad companies.

We have in stock, ready to ship, a soft wire straightened and cut to proper length, put up in bundles sufficient to bale 12,500 sacks.

## PRICES

Baler, as shown.....	\$30.00
Baler with two 16 inch wheels and handles .....	40.00
Annealed wire, cut to length, enough to tie 12,500 sacks, per bundle .....	3.75

FOR VARIOUS KINDS OF CEMENT AND PLASTER TOOLS, SEE INDEX

## NEW ECONOMY SACK BALER

You want credit for every good cement or plaster sack you return to the manufacturer. In order to expect this credit it is necessary to comply with the regulations of the railroads in bundling, and to be sure that you have an accurate count.

The New Economy Sack Baler in your business will pay for itself in increased credits allowed in a short time. It will enable you to count your sacks accurately and to bundle them perfectly. It makes it possible for you to count and bundle your sacks quickly and receive credit for them, instead of constantly permitting a large quantity to accumulate. Twenty bundles of 50 sacks each, represent an investment of \$100 on which there is no return. Money represented by these sacks in your warehouse can be used in productive ways.

Bales empty cement or plaster sacks. Makes all bundles tight, whether sacks are clean or dirty. One man can bale more sacks with this machine than two men can by hand, and will do it better.

There is nothing on this machine to get out of order.

The Baler is made with wheels for contractors' use.

## CONCRETE SPOUTING EQUIPMENT

## CONCRETE HOIST BUCKET

No. 345 Concrete Hoist Bucket is of a very rigid construction, and will stand hard usage. The channel guides running the entire length of the frame and flared at ends, also roller caster in front instead of flat bar, reduce friction to a minimum.

Fig. 346

Fig. 345  
CONCRETE DISTRIBUTING  
HOPPER

No. 346 Distributing Hopper is used in connection with our Concrete Hoist Bucket and is readily attached to any wooden tower. It is built to withstand the strain from the discharge of the concrete mass from the bucket. Has a controllable gate with lever, which can be set at the angle within range of adjustment best suited to the operator.

## FLEXIBLE SPOUTING, DUMP AND SCOOP CARS

### FLEXIBLE SPOUTING

Our Flexible Spouting is equipped with forged hooks and links, and any number of sections may be joined together. The top section is arranged with bale for connecting to discharge section of concrete chute.

Used extensively by contractors for placing concrete just where it is wanted, doing away with the old and expensive method of wheeling it by hand.

No. 536. Hopper Section, 24 inches square at top, 14 gauge steel .....each \$13.70

No. 537. Tubular Section, 10 inches diameter, 3 feet long, 14 gauge steel.....each 6.00

We can furnish any kind of Special Chuting to order. Send us your specifications.

Fig. 536-537

### CONCRETE CARS

Particularly adapted for chuting concrete into hoppers, and form work, in the construction of bridges, dams, and all places where it is impossible to tip the car. Special attention is called to the levers on each end, and the ease of operation in opening the gate.

### SCOOP CAR

Fig. 420

No. 420 Scoop Car is a favorite with contractors for handling concrete, as it can be operated by one man.

Can be built with straight end dump or with turntable, which allows car to be dumped from any position. Has a channel frame and is furnished with self-oiling or roller-bearing wheels or with wheels pressed on axles revolving in roller-bearing boxes.

## STONE ELEVATORS AND SCREENS — DUMP CARS

No. 610 Stone Elevator is used for stone or gravel, is built on a wooden frame and in any length up to 100 feet. Where the length is 30 feet or over, the elevator is supplied with a geared head unless otherwise specified. Take-ups are provided at foot of elevator to take care of slack in belt. Buckets are of steel and all parts of approved design.

### STONE SCREEN

No. 350 Stone Screen is made with any size perforated plate and is constructed so screen plates may be renewed. This style screen is used extensively by stone crushers, quarries and sand and gravel companies.

Fig. 350

List	Diameter inches	Length feet	Weight lbs.	Price	Extra per Foot Length

### END DUMP QUARRY CARS

The Standard straight side, swinging gate, end dump, quarry car is the most common type of quarry car and is giving satisfaction in hundreds of quarries. The body is of heavy steel plate reinforced with angles and bands. Under-frame is of oak with armored ends to protect cars in bumping. Wheels of chilled cast iron, either self oiling, roller bearing, or tight on axle with cast babbitted bearing boxes. Made in capacities from 1 to 3 yards. Built for 36 inch gauge unless otherwise specified.

Fig. 430

No.	Capacity cu. yd.	Diameter of Wheels inches	Weight lbs.	List Price
430A	1	12	1,050	\$120.00

430D	2 1/2	14	2,350	230.00

### LIFTING GATE END DUMP QUARRY CARS

For those who want the best all around quarry car we recommend our bent side car with lifting gate. The car is low and therefore easy to load, and the lifting gate can never open and discharge the load accidentally, as is the case with the swinging gate type. We can furnish this car in capacities ranging from 1 to 3 yards.

No.	Capacity cu. yd.	Gauge Track inches	Diameter of Wheels inches	Weight lbs.	List Price

## CONCRETE SPOUTING EQUIPMENT

Fig. 1341

Hoist Towers are usually built of wood and the size of the timbers to be used will depend upon the size of the equipment to be used and the height to which the tower is to be built. We will be glad to furnish this information upon request.

Four-by-four inch Guides should be used to suit the Channel Guides on the Hoist Ducket, and the Top Sheaves should be put at least ten feet above the Hopper Bracket.

Tower should be securely guyed, particularly at the top, and also at the Distributing Hopper. If concrete chutes are to be used, a platform should be built around the Hopper.

As the Open Boom Spouting Plant is supported entirely by the Tower it will place the concrete at any point within its radius, which may be 30 to 100 feet without obstructing the working floor. The Boom being of open construction allows the first section of spouting to pass through it, the head of the second length being suspended from the end.

## PRICES FURNISHED ON RECEIPT OF SPECIFICATIONS

Fig. 868

## TOWER SHEAVES

Two 12 or 14 inch Sheaves are usually used at the top of the Tower, and a single Sheave with housing at the bottom to lead cable to the Hoisting Drum.

## TOP SHEAVES

With 1 1/2 inch shaft and babbled boxes

List No.	Diameter inches	Size Cable inch	Price per Set

## KIESLER PATENT CLAM SHELL BUCKET

Fig. 236A. Open

The Kiesler Clam Shell Bucket is constructed with a shell or bowl so shaped that it will dig into the material with the least resistancy. They are operated by a powerful Compound Multi-System of Leverage (patented), closing the bucket more rigidly and quicker than in any other style of construction and forcing the bucket into the material instead of having a tendency to lift out.

For their respective sizes they will handle more material than any other Clam Shell Bucket.

This Bucket will handle Crushed Stone, Gravel, Slag, Packed Sand, Coal, Steel Turnings and Borings, and in fact can be used for all general purposes.

Teeth Extra Per Set	Shell Capacity Cu. Yds.	Approximate Wt. Lbs.	Closed		Width Ft. In.	Open		List Price
			Length Ft. In.	Height Ft. In.		Length Ft. In.	Height Ft. In.

100.00	2	4400	6 7	7 5	4 4	8 10	9 1	1920.00

They are built entirely of Steel and Crucible Steel Castings. The Sheaves are turned and bushed, and are fitted with Steel Bolts or Pins, which are bored and through which the Grease is forced into the center of the bearing, thoroughly lubricating where most needed. **ALL Bolts and Bushings are Case Hardened** and will give unexcelled service and will last for years. The Lever Sheaves are completely protected, so that it is impossible for the cable to jump off or chafe. The Shells are constructed with Steel Cutting Edges which cover the bottom and extend up on to the side. These Cutting Edges can be replaced when worn.

All parts are numbered, a reference to which is all that is necessary when ordering any parts.

A blue print is furnished with each bucket showing operation, and reaving of lines.

Fig. 236A. Closed

FOR ENGINES AND DERRICKS, SEE INDEX

Fig. 237A

## KIESLER PATENT CLAM SHELL BUCKET

### EQUIPPED WITH STEEL TEETH

The Clam Shell Bucket when fitted with Steel Teeth is adapted for general excavating purposes and digging hard materials. These Teeth will "bite" into the material and assist the bucket in starting to dig into the material. The Teeth are bolted on and can be readily removed when desiring to use the bucket as a regular Clam Shell Bucket.

All Kiesler Buckets are drilled for Teeth, which can be put on at any time; all that is necessary is to remove several rivets.

## KIESLER PATENT ORANGE PEEL BUCKET

The Kiesler Orange Peel Bucket is built for digging Clay and other Hard Materials, as well as for dredging and excavating purposes.

They are operated by the same powerful Compound MULTI-SYSTEM OF LEVERAGE as employed in the Clam Shell Bucket.

It is a substantially built bucket and will stand up under the most severe usage.

They are made entirely of Steel and Crucible Steel Castings. The Blades are made of flange steel and all connection Bars or Arms are forged from a solid bar of steel, and the Main Shaft is cold rolled steel.

The Sheaves are turned and bushed, and are fitted with Steel Bolts or Pins, which are bored and through which the Grease is forced into the center of the bearing, thoroughly lubricating where most needed.

All Bolts and Bushings are Case Hardened and will give unexcelled service and will last for years.

## CARPENTER No. 3 PORTABLE SAW RIG

## SPECIFICATIONS OF THE CARPENTER No. 3 PORTABLE SAW RIG

Upper Frame—2x4 inch clear maple.

Skids—4x4 inch Washington fir.

Uprights—2x2x $\frac{1}{4}$  inch angle iron.

Table—40x42x $1\frac{1}{8}$  inches clear maple built up of narrow strips glued and bolted together with two bolts extending through entire width. Table is hinged at rear end and raised and lowered by raising screw.

Belt—2 $\frac{1}{2}$  inches wide—tightened by belt tightener.

Arbor Bearings—1 $\frac{1}{8}$ x2 $\frac{3}{4}$  inches.

Diameter of Arbor for Saw—1 inch.

When installing an Electric Motor in any of our outfits, special attention must be given to the voltage on direct current service and the phase and voltage when mounting either single phase, two phase or three phase motor, with the correct cycle, speed, etc.

Speed of Arbor—2800 R. P. M.

Largest Diameter of Saw—12 inches.

Capacity of Saw—ripping 1 inch, cross-cutting 3 inches.

Capacity of Jig Saw—5 inch lumber.

Gasoline Consumption—about 1 $\frac{1}{2}$  gallons per day.

Overall Length of Outfit—56 inches.

Overall Width of Outfit—42 inches.

Height of Table from Floor—37 inches.

Net Weight of Outfit, with engine and all attachments—700 pounds.

Moulding Knives in any shape or form can be furnished, as well as a special cutter head to carry same.	

## THE CARPENTER No. 1-A PORTABLE SAW RIG

For sawing concrete form lumber, the Carpenter No. 1-A outfit is what you want. If you have a reinforced concrete job you can save much time and money on your forms by doing your own mill-work. One man with this machine can save you enough money to pay for it on one contract. This outfit was especially designed for this class of work, and will rip 4-inch lumber.

The frame, table, skids, etc., are constructed entirely of the very best maple, well seasoned, so as to hold their shape permanently. The standards, or legs, are made of 3½ inch square, clear maple, strongly bolted together. A partition is put in on the saw side, which protects the engine and all its working parts from saw dust. This partition also adds greatly to the stiffness of the frame.

The table is constructed of 1½ inch clear maple, 60 inches long by 42 inches wide, perfectly fitted and bolted together with three long bolts extending through the entire width of the table. The table can be raised and lowered and is held in position by two raising hooks and raising screw wheel. The table is made large, so that wide forms can easily be handled, either on the rip or cross-cut. The large rip and cross-cut guides slide in iron grooves.

The 10 inch emery wheel is a handy tool on the job to sharpen picks and to run the rough edges off of shovels, etc. You will make no mistake in purchasing this Rig if you want large capacity in ripping and cross-cutting lumber.

## SPECIFICATIONS OF THE CARPENTER No. 1-A PORTABLE SAW RIG

Frame—3½x3½ inch clear maple.  
Skids—3½x3½ inch clear maple.  
Table—42x60x1½ inch clear maple, built of narrow strips glued and bolted together with three bolts extending through entire width. Table is hinged at rear end and raised and lowered by a raising screw and locked in position by malleable iron hooks.  
Belt—¾ inch wide, tightened by belt tightener.  
Arbor Bearings—1 3-16x3¾ inches.  
Diameter of Arbor for Saw—1 inch.

Speed of Arbor—2600 R. P. M.  
Largest Diameter Saw—22 inches.  
Capacity of Saw—ripping 4 inches, cross cutting 4 inches.  
Gasoline Consumption—about 3 gallons per day.

Moulding Knives in any shape or form can be furnished as well as a special cutter head to carry same.	
An Adjustable Aluminum Saw Guard with spring steel Splitter is provided.	
This Guard conforms to the factory laws of any state.	

## THE CARPENTER No. 2 ALL IRON PORTABLE SAW RIG

The Carpenter No. 2 All Iron Portable Saw Rig, was designed with a view to securing rigidity, strength and simplicity, in an outfit that would stand the hard wear and tear on the job, or in the shop. The engine and saw table column are mounted on a heavy iron base, making it an absolute rigid unit. The 5 H. P. water hopper cooled engine or electric motor pulls a 14 inch saw, which will rip 4 inch lumber.

The iron saw table is 26x36 inches, accurately planed, with screw adjustment for raising and lowering. The adjustable rip gauge is set in a dove-tail groove. The cut-off gauge is adjustable from square to miter in either direction. A wooden table is attached to the iron table to protect the engine or motor from saw dust. The saw mandrel is made with a long projection on the collar end so that a varying thickness of cutter or dado head up to 2 inches may be used.

Each outfit is thoroughly tested and ready to run when delivered, and is sold under an absolute guarantee to be entirely satisfactory. It is a complete and economical portable power plant, guaranteed to give you no trouble.

### SPECIFICATIONS CARPENTER No. 2 ALL IRON PORTABLE SAW RIG

#### Specifications

Column—Iron box section.  
Skids—4x6 inch yellow pine.  
Table—Iron accurately planed.  
Over wood Extension Table is 35½x55 inches.  
Belt—3½ inches wide, tightened by belt tightener.  
Arbor Bearings—1 3-16x3½ inches.  
Diameter of Arbor for Saw—1 inch.  
Speed of Arbor—2600 R. P. M.  
Largest Diameter of Saw—14 inches.

Capacity of Saw—ripping 4 inches.  
Gasoline Consumption—about 3 gallons per day.  
Overall Length of Outfit—5 feet, 3 inches.  
Overall Width of Outfit—42 inches.  
Height of Table from Floor—37½ inches.  
Net Weight of Outfit with engine and all attachments—1440 pounds.  
Engine installed in Outfit 5 H. P., Carpenter hopper cooled.

## THE CARPENTER No. 2 ALL IRON PORTABLE SAW RIG ATTACHMENTS

1—14 inch Disston Rip Saw (filed and ret.)..... \$10.67  
1—14 inch Disston Cross Cut Saw (filed and set). 10.67

1—4 inch Jointer (4 knives) with adjustable iron block and gauge..... 29.33  
1—8 inch Emery Wheel..... 5.33  
1—Canvas Cover..... 14.67

1—Saw Table with adjustable rip gauge, cross cut gauge, saw mandrel, belt tightener and saw guard..... \$173.33  
1—Carpenter 5 H. P. Water Hopper Cooled four cycle gasoline engine complete with battery box, two spark plugs, wrenches, oil can..... 260.00

Carpenter No. 2 Saw Rig complete with all attachments..... \$533.33

### VARIOUS COMBINATIONS FURNISHED

Low-Tension friction drive magneto in connection with dry cells and coil..... \$40.00  
High-Tension gear-driven "Dixie" magneto (no dry cells or coil)..... 37.33  
No. 2 Saw Rig with 1—14 inch rip, 1—14 inch cross cut saw, gauges and 5 H. P. four cycle water hopper cooled gasoline engine, ready to operate (no attachments)..... 454.66  
Outfit complete with all attachments (without power)..... 273.33  
Outfit complete with all attachments, without power, but with tight and loose pulley and arbor belt. 300.00

Outfit complete with all attachments, with alternating current, single phase, 60 cycle motor, speed 1750 R. P. M. interchangeable, 110 or 220 volt, knife switch, wired and installed complete..... \$666.66  
Outfit complete with all attachments, with alternating current, two or three phase, 60 cycle motor speed 1720 R. P. M. interchangeable, 220 or 440 volt, knife switch, wired and installed complete. 540.00  
Outfit complete with all attachments, with direct current motor, speed 1720 R. P. M., 110 or 220 volt, with starting box, wired and installed complete..... 653.33

Special Adjustable Dado Heads, to Cut any Size from ¼ to 2 inches wide can be Mounted on this No. 2 Outfit.

## CARPENTER No. 4 ALL IRON PORTABLE SAW RIG

## SPECIFICATIONS OF THE CARPENTER No. 4 ALL IRON PORTABLE SAW RIG

Frame Ends—cast iron channel section.  
 Skid—4 inch channel iron, reinforced with 4x4 inch yellow pine.  
 Upper Side Members—3 inch channel irons.  
 Table—42x68 inches iron, accurately planed and well ribbed on under side. Hinged at rear end and raised and lowered by raising screw. Locked in place by steel links and hand wheels at corners of table. Iron throat plate where saw projects through table.  
 Belts—both 4 inch double ply.  
 Countershaft—1½ inches diameter.  
 Speed of Countershaft—650 R. P. M.  
 Arbor Bearings—1½x4½ inches.  
 Diameter of Arbor for Saw—1½ inches.  
 Speed of Arbor—2500 R. P. M.

Largest Diameter Saw—20 inches.  
 Capacity of Saw—ripping 6 inches, cross cutting 8 inches.  
 Gasoline Consumption—about 4 gallons per day.  
 Jointer Head—4 knife cylindrical safety head. Jointer Table attached to main table—adjusted by hand wheel.  
 Jointer Head covered by automatic safety guard.  
 Boring Attachment—vertical type.  
 Size of Bits Furnished—one each ½, ¾ and 1 inch.  
 Speed of Bits—1200 R. P. M.  
 Overall Length of Outfit—6 feet, 6 inches.  
 Overall Width of Outfit—53 inches.  
 Height of Table from Floor—40 inches.  
 Net Weight of Outfit with Engine—2400 pounds.

When installing an Electric Motor in any of our outfits, special attention must be given to the voltage on direct current service and the phase and voltage when mounting either single phase, two phase or three phase motor, with the correct cycle, speed, etc.

## CARPENTER No. 6 PORTABLE SAW RIG

## SPECIFICATIONS OF THE CARPENTER No. 6 PORTABLE SAW RIG

Skids—3 inch angles reinforced with  $3\frac{1}{2} \times 3\frac{1}{2}$  inch timbers.

Legs and Upper Members— $2\frac{1}{2} \times 2\frac{1}{2}$  inch angles.

Table— $42 \times 56 \times \frac{1}{4}$  inch steel plate, bound around edges with  $1\frac{1}{4} \times 1\frac{1}{4}$  inch angles. Table is hinged at rear and raised and lowered by raising screw and locked at front corners by brackets and hand nuts. Has removable wood throat block.

Rip and Jointer Gauges—Adjustable from square to 45 degrees.

Cross Cut Gauge—Adjustable from square to mitre either side.

Arbor Bearings— $1\frac{1}{2} \times 3\frac{3}{4}$  inches, wick oiled.

Diameter of Arbor for Saw—1 inch.

Diameter of Countershaft— $1\frac{1}{4}$  inches.

Speed of Arbor—3,000 R. P. M.

Speed of Countershaft—775 R. P. M.

Largest Diameter of Saw—14 inches.

Capacity of Saw—3 inch rip, 4 H. P. engine, 4 inch rip 5 H. P. engine.

Jointer—Four knife cylindrical safety head. Stopped and started by friction clutch on countershaft.

Length of Knives—6 $\frac{1}{2}$  inches.

Overall Length of Jointer Tables—40 inches.

Height of Jointer Tables from Floor—33 inches.

Borer and Mortiser Table— $22 \times 8$  inches.

Horizontal Travel of Table—8 inches.

Vertical Adjustment of Table—7 inches.

Capacity up to  $1\frac{1}{2}$  inch diameter bit, or  $\frac{3}{4}$  inch square hollow mortise chisel.

Band Saw Table— $18 \times 18\frac{1}{2}$  inches, can be tilted to 45 degrees.

Horizontal Capacity—20 inches.

Vertical Capacity—8 inches.

Width of Saw Blade—Up to  $\frac{3}{4}$  inch.

Height of Band Saw Table from Floor—41 inches.

Stopped and started by shifting belt.

Sander—Disc type, 14 inch diameter, operated on saw arbor.

Dado Head Operates on Saw Arbor—8 inch diameter, cuts  $1\frac{1}{4}$  inches deep.

Overall Length of Outfit with all Attachments—7 $\frac{1}{2}$  feet.

Overall Width of Outfit with all Attachments—5 feet.

Height of Saw Table from Floor—38 inches.

Net Weight of Outfit with engine and all attachments, with 4 H. P. engine 2,400 pounds, with 5 H. P. engine 2,500 pounds.

Carpenter 5 H. P. Water Hopper Cooled Engine, mounted in place of the standard 4 H. P. engine add.....	53.33
Magneto complete with bracket.....	37.33

## SWING CUT-OFF SAW

Fig. 571

This Swing Cut-off Saw is admirably adapted for motive drive. The most desirable construction is to mount the motor direct on the frame. In this way the power is always self-contained with the machine, and where necessary it can be moved to suit the convenience of the purchaser.

The motor driven swing saw can be furnished either with wall brackets or ceiling hangers, but hangers are always furnished unless otherwise specified. To bolt the motor to the ceiling, we can furnish a special base plate to receive the motor and the hangers, but the price will be the same in either case.

The frame is cast in one piece, cored out hollow. There may be cheaper ways of making frames, but none better. The mandrel is carefully made of steel, with pulley shrunk on solid. The bearings for mandrel are  $1\frac{1}{4}$  inches in diameter, 5 inches long, and are provided with a self-oiling capillary felt to feed oil as required. The hangers are adjustable, making it a very simple matter to properly level up the machine. The frame is hung to the hangers in such a manner that it is impossible for the weight of the frame to ride on the shaft, insuring shaft to work free and easy. And a very useful feature of this machine is the convenient arrangement of the belt-shifter. The belt cannot creep from one pulley to the other, and shifter-handle is located convenient to operator. The

shifter is reversible so that the machine can be belted to line-shaft either in front or to rear of machine.

When specially so ordered, the machines can be furnished with wall brackets (instead of hangers) to suit for hanging the machine to wall instead of ceiling, there being no extra charge for this arrangement.

The machine is made in six sizes, viz.,  $5\frac{1}{2}$ , 6,  $6\frac{1}{2}$ , 7,  $7\frac{1}{2}$ , and 8 foot, measured from ceiling to mandrel. When machine is hung, the mandrel should be about 36 to 38 inches above floor. Either of two size sawshields is furnished; one for saws 18 inches and smaller, or one for saws 24 inches and smaller.

## DIMENSIONS

Size of mandrel pulley.....	5 x 5 inches
Size of tight and loose pulleys.....	10 x 5 inches
Speed of countershaft, per minute.....	550 revolutions
Making speed for 18-inch saw, per minute.....	2000 revolutions
Length of belt (5-inch) for $5\frac{1}{2}$ and 6 foot machine.....	12 feet 2 inches
Length of belt (5-inch) for $6\frac{1}{2}$ and 7 foot machine.....	14 feet 2 inches
Length of belt (5-inch) for $7\frac{1}{2}$ and 8 foot machine.....	16 feet 2 inches
Size of hole in saws.....	$1\frac{1}{8}$ inches
Shipping weight.....	450 pounds

All sizes of machines same price. List each, \$50.00.

## EQUIPMENT

Each machine is furnished with one saw-shield, one mandrel wrench and belt-shifter. Unless otherwise specified, all orders will be filled with the  $6\frac{1}{2}$  foot machine, with 18-inch saw-shield, without saw or belt. See Index for Circular Saws and Belt.

## AMERICAN CHAMPION POWER DRAG SAW

Strong, Durable, Easy to Operate and a Rapid Worker

Friction Feed is very simple, positive and effective

Balance Wheel, large, heavy counter balanced, giving strong, steady motion.

Capacity, 30 to 40 cords per day.

Power required, 2 to 4 horse power.

Price with tight pulley .....\$100.00

Price with tight and loose pulley... 110.00

Fig. 2371

Fig. 2372

## AMERICAN LIGHT SWING SAW

This machine can be used for a large variety of light work and is especially useful in woodworking establishments where a large heavy frame is unnecessary. The length of frame permits the machine being suspended over an ordinary work bench. Frame of solid cast iron, strong and very rigid.

Mandrel and pulley are turned from solid steel.

Guard is furnished which has handle for operating the machine.

List price, without Saws.....\$40.00

SEE INDEX FOR CIRCULAR SAWS

Fig. 2373

## AMERICAN SAW GUARD

Guard Your Saws and Prevent Accidents and Law Suits

The Guard shown here is extremely simple and effective and can easily be attached to any type of rip and cut-off saw bench. Made entirely of steel and iron. Protects saw and operator alike. Standard guards are made right or left hand.

This Mill combines all of the best features which have for many years entered into the construction of Circular Saw Mills. Simplest in design. **Cuts more lumber with the same power than any mill made.**

Each Mill (except No. 1) is fitted with the GIANT duplex Steel Dogs (see cut to left), Combined Ratchet Set Works and Quick Receder, Rolled Steel Track, Self Oiling Bearings throughout, Way Timbers framed together in sections with steel track attached, and Improved Belt Tightener.

Also made with Wire Cable Drive, with Log Beam Carriage and with two different styles of Belt Feeds.

We furnish Saw Dust Blowers, Conveyors, Lumber Trucks and a full line of Saw Mill Accessories. See index.

Also full line of Heavy Stationary Circular Saw Mills, Steam Niggers, Jackers, etc. See index.

## AMERICAN UP-TO-DATE POWER FEED SHINGLE MACHINE

### A Reliable, Low Priced Machine

Just right for small mills, farmers and others having light power who want to make a few thousand shingles a day.

Makes a Perfect Shingle any Length from 16 to 24 Inches

HAS KNOT SAW AND EDGER for edging or jointing the shingles when made from round or split stock.

MAKES HEADING OR CRATE SLATS up to 36 inches long, if desired.

By removing the center board at rear of carriage it can be used for Bolting and other kinds of sawing.

Price with Edger .....\$115.00

Price without Edger ..... 100.00

Price extra for 36 inch Machine ..... 15.00

Up-to-Date Shingle Machine

## AMERICAN "TRIUMPH" PLANER, MATCHER AND MOLDER

Two Sizes—20 and 24 inch  
Single or Double Surfacers

This is a very compact, rigid machine, and is designed to economize space and withstand the hardest usage as well as to do the best class of work.

Adapted for use where a machine is required for a large variety of work, such as planing and matching, beading, working flooring, ceiling, siding, casing, wainscoting, and a large variety of molding and trim.

No. 5. Cord Wood Saw

## JOINTERS

Fig. 16

The tables have wide flanges and are heavily ribbed, the rear table being arranged with an offset along the front side for rabbeting.

The fence is made with a vertical graduated scale and is adjustable to any angle to 45°. Furnished with one pressure spring to hold work to the table. Convenient for working ribs, narrow stock, etc.

The head can be furnished either with round Safety Head or with four sided Square Head, the latter having two sides of regular knives and two sides with T slots for special cutters.

Jointer No.	8	12	16
Length of knives, inches	8	12	16
Length of front table, inches	31½	40	40
Length of rear table, inches	31½	40	40
Length over all, inches	65	82	82
Width of table, inches	13	15½	19½
Height of table from floor, inches	33	33½	33½
Diameter of pulley on head, inches	3½	4	4
Widest belt to be used, inches	2½	4	4

The frame is made on correct lines and principles. It is cast in one solid piece, with wide base bearing on the floor at both ends of machine. This form of frame gives the machine stability and stiffness. Bearings are made with special care, the lower part being cast solid with frame, insuring permanent alignment. A cover is cast over the end to prevent oil from getting on the operator's clothes. Fitted with best grade high-speed babbit.

Inclines on which tables rest provided with adjustable clip to take up wear. These inclines are bolted to a sliding sash-like casting, which is dovetailed and gibbed into main frame, allowing the tables to be horizontally withdrawn away from the head without disturbing their adjustment. This is convenient when sharpening or changing knives.

Jointer No.	8	12	16
Size of bearing, pulley end, inches	1¼x4½	1½x7	1½x7

Price	\$110.50	\$127.50	\$140.25

Also made in 18, 20 and 24 inch sizes.

Prices and information on application.

## PLANERS

Of extremely compact design, occupying a minimum amount of floor space, yet so thoroughly well made and carefully designed, that it answers every requirement of the average user.

The feed is driven from a pulley on the countershaft to a pair of tight and loose pulleys on the machine. A convenient belt shifter is provided on the machine for starting and stopping the feed. The rate of feed is 25 feet per minute.

The machine is not made with lower rolls driven, the upper rolls only being driven. The upper rolls are hung with springs. The front and rear rolls are 10 inches apart from center to center and are 2½ inches in diameter, made of solid steel.

A guard rail is placed in front of the upper front roll to prevent accident to operator when feeding short stock. The countershaft may be belted in any direction to line shaft—above or below; to front or to rear.

**Regular equipment:** Each machine is furnished with one countershaft having self-oiling loose pulley, one pair of two knives and two wrenches.

## CARPENTER WORM GEAR DRIVE TRENCH PUMP

Fig. 3686

## Specifications of the Carpenter Power Driven Diaphragm Bilge Trench Pump

Engine direct connected through flexible coupling to worm and worm gear on pump.  
 Stroke of Pump—55 per minute.  
 Capacity—3 inch, 3000 gallons per hour.  
 4 inch, 6000 gallons per hour.  
 Gasoline Consumption—about 1 gallon per day.  
 Extreme Suction Lift—20 feet.  
 Overall Length—45 inches.  
 Overall Width—30 inches.

Truck Wheels—front 8x3 inches, rear 14x3 inches  
 Net Weight of Outfit with engine and 3 inch pump on skid—475 pounds.  
 Net Weight of Outfit with engine and 4 inch pump on skid—525 pounds.  
 Engine Mounted on Outfit—2 H. P. Carpenter water hopper cooled.  
 High Tension Magneto mounted. (No dry cells or coil.)

## THE SUMTER HIGH-TENSION "DIXIE" MAGNETO

The Sumter High-Tension "Dixie" Magneto mounted on this outfit is of high efficiency, having been designed to run single-cylinder engines of the jump spark type. It is water and oilproof.

Dry cells and coil are entirely done away with.

Engine can be started as easy with this High-Tension Magneto as with dry cells and coil. Note priming cup on side of engine cylinder.

## THE CARPENTER POWER DRIVEN DIAPHRAGM BILGE TRENCH PUMP

Carpenter No. 4 Trench Pump complete on truck.....	253.33
Complete housing for outfit.....	35.00

## See Index for Suction Hose.

## THE CARPENTER ENGINE

The Carpenter water hopper cooled gasoline engine is the simplest and best constructed engine that a contractor can buy. Its fuel consumption and cost of operation is lower than any other engine on the market. This has been proven many times by actual tests and records kept by contractors on the job. Compactness, accessibility, reliability and simplicity were developed to a high degree in the construction of this engine. As a result the Carpenter engine occupies less space and weighs less for the power it develops than any other engine manufactured. For that reason it is well adapted for installation in Portable Saw Tables and other portable machines for use on the job.

It is built for rough service and will stand considerable abuse from inexperienced operators. It is of the four cycle type which insures fuel economy—hopper cooled which makes it free from tanks, radiators piping and circulating pumps and insures efficient cooling.

It is designed specially for the contracting trade for operating Portable Saw Rigs, Power Driven Bilge and Centrifugal Pumps, Builder's Hoists, Mortar Mixers, etc.

The steady increase in the sale of the Carpenter line of Contractor's Equipment proves positively that its economy and reliability has been tested out and proven.

We stand back of each and every one of our machines with a guarantee that it must prove to the absolute liking and satisfaction of the purchaser or it may be returned at our expense and any money paid will be refunded.

## THE CARPENTER WATER HOPPER COOLED GASOLINE ENGINE

Carpenter gasoline engine four cycle, water hopper cooled, with hit and miss type of governor, high grade jump spark ignition and suction feed gasoline vaporizer, all complete ready to run.....	\$106.66
2 H. P. engine complete with battery box, two spark plugs, tools, lubricator, grease cups, etc.....	133.33
3 H. P. engine complete with battery box, two spark plugs, tools, lubricator, grease cups, etc.....	206.66
4 H. P. engine complete with battery box, two spark plugs, tools, lubricator, grease cups, etc.....	260.00
5 H. P. engine complete with battery box, two spark plugs, tools, lubricator, grease cups, etc.....	293.33
6 H. P. engine complete with battery box, two spark plugs, tools, lubricator, grease cups, etc.....	40.00
Low-Tension friction drive magneto in connection with dry cells and coil.....	37.33
High-Tension gear-driven "Dixie" magneto (no dry cells or coil).....	

## CARPENTER GASOLINE POWER DRIVEN DIAPHRAGM TRENCH PUMP

Fig. 9933

In offering this Power Pump to the trade, we know without a doubt that we have reached perfection in the gasoline driven trench pump. We have sold various trench pumps for a number of years, but none of them came up to what we believed a pump of this style should be. Our experience in dealing with contractors all over the United States, and knowledge of their working problems, was largely responsible for this pump, which is made in accordance with specifications to meet any emergency. In order to reach this state of proficiency, it was necessary to make numerous tests on actual construction work under all conditions, and this pump met them without a flinch.

The engine is a great big strong full rated three horse power, capable not only of operating the single pump which is furnished with this outfit, but two pumps in battery which can be made by the addition of a double pump lever. Another great advantage is that there are four speeds to the pump, controlled by a series of connections on the pump jack whereby it is possible to run the outfit very slow to take care of small seepage, or it can be regulated to the maximum capacity of the pump. See illustration.

We call particular attention to the large water hopper, full pattern main frame, extra large high grade crank shaft, unusually efficient carbureter, and improved governor. Every part is made from gigs and is interchangeable. The specifications are very liberal. Every outfit is carefully tested before shipping.

The entire outfit is mounted complete on a steel channel iron truck making it light and at the same time the strongest outfit on the market, there being no wood in its construction.

The cost of operation is very low. The gasoline consumption is approximately two gallons every eight working hours. The capacity of the outfit mounted complete with 3-inch side suction Carpenter Diaphragm Pump is 4,000 gallons per hour, or mounted in connection with 4-inch side suction Carpenter Diaphragm Pump 6,000 gallons per hour.

### Take special note of these specifications:

Engine.....	Full three horsepower	Diameter crank shaft.....	1 $\frac{3}{8}$ inches
Cylinder bore.....	4 $\frac{1}{2}$ inches	Diameter crank pin.....	1 $\frac{1}{8}$ inches
Cylinder stroke.....	6 inches	Length main bearings.....	3 inches
Diameter fly wheel.....	22 inches	Diameter drive pulley.....	8 inches
Length overall.....	46 inches	Face drive pulley.....	4 inches
Height overall.....	24 inches	Weight of outfit complete, 3-inch pump.....	675 lbs.
Width overall.....	24 inches	Weight of outfit complete, 4-inch pump.....	715 lbs.
List price complete, 3 inch suction.....			\$120.00
List price complete, 4 inch suction.....			144.00

Price does not include suction hose.

FOR SUCTION HOSE AND FITTINGS, SEE INDEX

## REPAIR PARTS

For Carpenter gasoline power driven trench pump engines and magneto equipment.

In ordering repair parts or extras always specify the items wanted by giving both the name and number of part.

No.	NAME OF PART	3 H. P.	No.	NAME OF PART	3 H. P.
R-1	Balance Wheel (right hand).....	\$6.10	54	Rocker Arm Roller Pin.....	\$ 0.28

## THE CARPENTER POWER DRIVEN CENTRIFUGAL PUMP

Where a greater lift of water is required over that of the bilge trench pump, this Centrifugal power driven outfit will fill the demand. The conditions under which Centrifugal Pumps are used vary considerably. We are giving but one view here, a 2½ inch Suction Pump, chain driven, in connection with a Carpenter four horse-power, four cycle water hopper cooled gasoline engine.

The chain sprockets on this outfit are made of high grade steel forgings accurately machined all over. The teeth are machine cut, insuring an exact fit to the chain. The chain is a hardened steel roller chain of the same type as extensively used for automobile and truck drives. It is of ample strength to withstand the severe duty these outfits are subjected to.

The four horse-power Carpenter Engine and Pump are connected by chain which is enclosed in a guard, all mounted complete on a strong channel iron truck.

The chain drive is giving good satisfaction, and this outfit can be absolutely relied on, as it is very substantially built of the best material and workmanship.

To give correct recommendations regarding an outfit best adapted to the individual requirements, full information as to capacity wanted, nature of fluid to be pumped, total head including suction and discharge, suction lift in feet, etc., must be given.

#### SPECIFICATIONS OF THE CARPENTER POWER DRIVEN CENTRIFUGAL PUMP

Truck—3 and 4 inch channels.

Wheels—Front 9x3 inches, rear 12x3 inches;  
front 14 inches, rear 22 inches.

Engine connected to pump by steel roller chain.

Extreme suction lift—20 feet.

Speed and power must be in proportion to load.

Can also furnish this type of pump good for head up to 125 feet.

To quote on other size outfits we must have total head, suction head, total length of pipe and capacity desired.

Engine mounted on outfit—Carpenter hopper cooled.

#### THE CARPENTER POWER DRIVEN CENTRIFUGAL PUMP

Carpenter Power Driven Centrifugal Pump complete on skid, with 2 inch suction, 1½ inch discharge, in connection with Carpenter three horse-power gasoline engine (capacity 3,600 gallons per hour), 40 foot head.....	\$266.66
Outfit complete mounted on steel truck.....	286.66
Carpenter Power Driven Centrifugal Pump complete on skid, with 2½ inch suction, 2 inch discharge, in connection with Carpenter four horse-power gasoline engine (capacity 7,000 gallons per hour), 40 foot head.....	453.33
Outfit complete mounted on steel truck.....	480.00
Carpenter Power Driven Centrifugal Pump complete on skid, with 3 inch suction, 2½ inch discharge, in connection with Carpenter four horse-power gasoline engine (capacity 12,000 gallons per hour), 30 foot head.....	473.33
Outfit complete mounted on steel truck.....	500.00
Carpenter Power Driven Centrifugal Pump complete on skid with 3 inch suction, 2½ inch discharge, in connection with Carpenter six horse-power gasoline engine (capacity 12,000 gallons per hour), 50 foot head.....	435.00
Outfit complete mounted on steel truck.....	606.66
Carpenter Power Driven Centrifugal Pump complete on skid, with 4 inch suction, 3 inch discharge, in connection with Carpenter six horse-power gasoline engine (capacity 15,000 gallons per hour), 30 foot head.....	620.00
Outfit complete mounted on steel truck.....	646.66
Complete housing for outfit.....	46.67
Low-tension friction driven magneto in connection with dry cells and coil.....	40.00
High-tension gear driven "Dixie" magneto (no dry cells or coil).....	37.33
Hose or pipe furnished in any length. See index.

## CARPENTER PORTABLE PISTON PUMP

Water bound macadam roads, concrete roads, in fact all roads when newly made require a great deal of water in their construction, in company road building the water supply for both mixer and watering down the road, has been a problem to the contractor, and with the large building of roads, a portable pump to supply water fills this demand.

The Carpenter Power Driven Piston Force Pump as illustrated here, has done good service on roads being built throughout the country, pumping to a distance as far as two and half to three miles. It is an outfit also suitable for small pumping stations, railway supply systems, small irrigation plants, country homes, etc.

This Outfit Will Pump to a Head of 200 feet or its Equivalent pressure of 85 pounds.

## Specifications of the Carpenter Power Driven Piston Force Pump

Truck—4 inch channels.  
Wheels—front 14x4 inches, rear 22x4 inches.  
Engine direct geared to pump.

## CAPACITY—

- No. 00 Outfit—900 gallons per hour, 1½ inch suction and discharge.  
No. 0 Outfit—1500 gallons per hour, 2 inch suction and discharge.  
No. 1 Outfit—900 gallons per hour, 1½ inch suction and discharge.  
No. 2 Outfit—1500 gallons per hour, 2 inch suction and discharge.

No. 4 Outfit—3600 gallons per hour, 3 inch suction and discharge.

Extreme Suction Lift—20 feet.

Total Lift—(suction and discharge) 150 feet on No. 00-0 Outfits, 200 feet or equivalent pressure on No. 1, 2, 3 and 4 Outfits.

We can also furnish this type of pump up to capacity of 7000 gallons per hour.

Overall Length of Outfit—6 feet.

Overall Width of Outfit—3 feet, 4 inches.

## CARPENTER PORTABLE TRIPLEX PUMP

Concrete roads and water bound macadam roads now so extensively being built, require a great deal of water in their construction. The water supply is often quite a distance from where it is needed, and to get it to this point at all times, both for the mixer and for sprinkling the new laid road, requires a dependable and efficient pump.

To meet the demand for a pump that is good for a higher pressure and capable of delivering water over a longer distance, and to a higher elevation than our Piston Force Pumps, we have this Single Acting Triplex Plunger Pump.

The bearings, connecting rods, valves and glands are all accessible for occasional inspection and adjustment. These pumps being direct geared to our hopper cooled gasoline engines make the constant attendance of an operator unnecessary. The gears are all machine cut and of ample size to stand the severest strains. A relief valve set at the maximum working pressure of this pump is furnished with each outfit, making it impossible to wreck the pump in case the water becomes obstructed at any point in the pipe line.

In writing for further information on these outfits be sure and give us the distance the pump is to be placed from the water, the number of feet the water is to be elevated both in the suction and discharge line, the amount of water required per hour and the size and length of pipe to be pumped through.

## SPECIFICATIONS OF THE CARPENTER POWER DRIVEN TRIPLEX PUMP

Truck—4 inch channels.  
Wheels—Front 14x4 inches, rear 22x4 inches.  
Engine—Direct geared to pump.  
Pump Crank Shaft—High grade steel.  
Valves—Rubber disc type, easily accessible.  
Cylinders and Plungers—Close grained grey iron.

Gears—Accurately machine cut.  
Base Plate—Steel reinforced with steel tee.  
Relief Valve—Set at maximum working pressure of pump, furnished with each outfit.  
Extreme Suction Lift—20 feet.  
Engine Mounted on Outfit—Carpenter hopper cooled.

## THE CARPENTER POWER DRIVEN TRIPLEX PUMP

Carpenter No. 1 Power Driven Triplex Pump complete on skid, with 3 inch by 4 inch single acting Triplex Pump, 1½ inch suction, 1½ inch discharge, FITTED WITH RELIEF VALVE, mounted in connection with Carpenter four horsepower gasoline engine (capacity 1500 gallons per hour—total head 350 feet or maximum pressure of 150 pounds)..... \$546.66  
Outfit complete, mounted on steel truck..... 573.33

Outfit complete, mounted on steel truck..... \$646.66  
Carpenter No. 3 Power Driven Triplex Pump complete on skid, with 3½ inch by 4 inch single acting Triplex Pump, 2 inch suction, 2 inch discharge, FITTED WITH RELIEF VALVE, mounted in connection with Carpenter six horsepower gasoline engine (capacity 2400 gallons per hour—total head 460 feet or maximum pressure of 200 pounds)..... 813.33  
Outfit complete, mounted on steel truck..... 840.00  
Complete housing for outfit..... 53.33  
Low Tension Friction Driven Magneto in connection with dry cells and coil..... 40.00  
High Tension Gear Driven "Dixie" Magneto (no dry cells or coil)..... 37.33

## THE EVINRUDE UNIT CENTRIFUGAL PUMP

The ever increasing popularity of the Evinrude Motor makes it unnecessary for us to enter into a lengthy description of it. Since its first appearance on the market, its record for efficiency, durability and service has put it well to the front in the ranks of motors.

The manufacturers of the Evinrude have combined the motor with an unusually high grade centrifugal pump.

The pump proper consists only of a rotating impeller mounted within a casing. To the casing is bolted the bracket, or mounting, for the gasoline motor, which furnishes the power. This is coupled up by direct drive, so that not an ounce of power is lost.

The ignition is built into the flywheel in the form of the Evinrude Magneto—Flywheel Type. Being entirely insulated and protected, the magneto cannot be damaged or put out of commission by dampness or even a drenching rain. Your power plant is absolutely dependable.

The pump is set right down into the excavation and submerged in the water. No suction pipe is required—there is no need of priming. Start the motor, with a half-turn of the flywheel, and the pump starts the water through the discharge pipe. With the outlet of 1½ inches, and the large, open, unobstructed passages, the pump will deliver large quantities—average capacity of 2,400 gallons per hour against a 25 foot head, in the 2 H. P. size—of even semi-fluids, or water containing grity or solid matter, without choking or causing undue wear. Only 17½ inch by 21 inch floor space required. The light weight, 133 lbs., permits of easy handling by two men.

The parts are few and there is nothing complicated or difficult to get at. Starting is easy and the operation simple. Any man on the job can handle the Evinrude. An engineer's knowledge is not required—and a good saving can be effected right there. In the 2 H. P. size, the gasoline tank holds one gallon—sufficient for four hours running—remarkably low fuel cost. The lubricating oil is mixed right with the gasoline—no oil cups to watch or worry about. You can leave the pump without attention for hours at a time and on your return you will find it plugging along faithfully and steadily.

By the addition of the rowboat bracket and propeller sleeve, the motor proper can be used for driving a rowboat, skiff, work-boat or scow. Or, by removing the propeller and substituting a flanged pulley, you can belt up to a grindstone or saw.

## WEIGHTS

2 H. P. net 133 pounds. Crated for shipment, 169 pounds.  
3½ H. P. net 167 pounds. Crated for shipment, 212 pounds.

## LIST PRICES

2 H. P. Rowboat Motor complete, with Centrifugal Pump complete	\$110.00
minus propeller sleeve, bracket, etc.	90.00
2 H. P. Rowboat Motor, complete	90.00
Centrifugal Pump complete, for 2 H. P. Motor	30.00

NOTE—Any model of Evinrude can be attached to the pump, but the lower priced ones are as efficient as any for the work.

3½ H. P. Rowboat Motor complete, with Centrifugal Pump complete	\$150.00
minus propeller sleeve, bracket, etc.	115.00
3½ H. P. Rowboat Motor complete	125.00
Centrifugal Pump complete for 3½ H. P. Motor	45.00

Fig. S51. Evinrude Unit

POWER ROTARY FORCE PUMP  
ON FRAME

Arranged with Tight and Loose Pulleys

Fig. 120 represents our Power Rotary Force Pump on cast iron frame and arranged with tight and loose pulleys.

The Cams or gears are milled on both sides and faced and key-seated to shafts.

The Case is bored true to gauge to accommodate the cams with just enough clearance to produce highest efficiency.

The Shafts are of ground cold rolled steel, centered and straightened. No. 1, 2 and 3 are 1 1/16 inch diameter. No. 4 and 5 are 1½ inch diameter.

The Stuffing Box is of latest design and will not leak.

As shown in cut, the pulleys are supported by very strong bearings with babbit lined boxes, the shaft extending out a sufficient length beyond the bearings to admit the use of a balance wheel, but this wheel is only furnished when ordered.

This pump can be used in all places where a large quantity of water or liquids of any kind are required; is constructed to operate against a pressure of from ten to fifty pounds to the square inch, discharging a steady stream of water.

Will draw water 15 feet and force to an elevation of 100 feet.

## SIZES AND LIST PRICES

No.	Suction Fitted for Pipe, inches	Discharge Fitted for Pipe, inches	Size Pulleys inches	Weight pounds	At 100 R. P. M. gallons	Iron	Bronze Case and Cams	Bronze*

\*Bronze pumps have all parts coming in contact with liquid of bronze.  
Ratio of Speed from 100 to 200 Revolutions per Minute.

## CENTRIFUGAL PUMPS

## HORIZONTAL SIDE SUCTION

Direct Connected to Vertical Gasoline Engine

Fig. 1231A

This is our Centrifugal Water Pump directly connected to a high speed gasoline engine. The combined pump and engine are mounted on a substantial cast iron base together with a suitable gasoline tank. Provision is made for circulating the cooling water through the engine directly from the centrifugal pump, thus making a very compact and portable outfit.

As the speed of these engines can be instantly changed while running, they offer a wide range of capacities and elevations, making them useful for contractors, and others in pumping out trenches, excavation for foundations, etc., where a portable outfit that can be quickly put in service is required.

A suction hose and foot valve can be used and the pump primed by pouring full of water, or a primer can be provided on the suction and the pump primed by hand.

Fig. 1231B

No. Pump	Size of Pipe		Approximate Capacity and Total Head	Size Engine		Price
	Discharge inches	Suction inches		H. P.	Number Cylinders	
2	3	3	100 gal. 25 ft. to 200 gal. 10 ft.	3 1/2	1	\$285.00
3	3 1/2	4	150 " 50 " " 400 " 10 "	7	2	375.00
4	4	4	200 " 60 " " 600 " 10 "	12	2	465.00
5	5	5	300 " 60 " " 900 " 10 "	18	3	645.00

Price covers outfit complete as shown in illustration, including gasoline tank mounted on pump, carburetor, timer and spark plugs.

A spark coil with suitable dry battery cells, switch and battery wires is also supplied. For table of Speed of Pumps, see index.

## CHALLENGE DOUBLE-ACTING FORCE PUMPS

All "Challenge" Pumps have brass-cased piston rods, brass valves and seats, and as Cylinders are either brass lined or brass working parts are unaffected by acid or salt water. Large air chamber.

Fig. 2. Single Lever

No.	Diam. Cylinders inches	Suction inches	Discharge inches	Single Lever Brass Lined	Double Lever Brass Lined
2	2 1/2	1 1/4	...	\$27.00	....

Fig. 8. Double Lever

## PEARSON DOUBLE-ACTING FORCE PUMPS

An efficient pump for general use. Valves are easy of access, by unscrewing the bolts and lifting off the air chamber. Mounted on plank; is fitted for either iron pipe or hose, as desired.

## BRASS LINED

No.	Size Cylinders inches	Suction inches	Discharge inches	Stroke inches	Price Each
275	3	1 1/2	1 1/4	5 1/4	\$27.00
276	5	2 1/2	2	6	45.00

Fig. 275. Single Lever

Fig. 276. Double Lever

## COMBINATION BOILER TEST AND HAND FEED PUMPS

## BRASS FITTED

This is a double-acting pump of special design and construction, capable of being worked by one man against 500 pounds pressure. It has brass piston (packed), brass piston rod, and forged steel connections.

Length of stroke, 5 inches. Suction for 1 inch pipe.

Discharge for 3/4 inch pipe. Weight, including base plate, 60 pounds.

The illustration shows base for fastening down, but where the pump is intended for general purposes and to be moved from place to place (for inspectors or boiler-shop testing, etc.), we can substitute a long base on which the operator may stand. Price the same for either style, but unless otherwise instructed we will consider that the square base as illustrated is wanted.

Repacking or cleaning is conveniently done by simply unbolting and lifting the pump off from its base.

Price each.....\$25.00

Fig. 0

## DIAPHRAGM PUMPS

### THE CARPENTER NEW DIAPHRAGM SUCTION PUMPS

For Suction Lift 25 Feet

Fig. 1223

Carpenter Diaphragm Pumps are made for handling large quantities of muddy and gritty water, sewage or semi-fluids.

They are the simplest type of pump made: two valves and a strong rubber diaphragm—which creates suction by an up-and-down motion—constitute the pumping mechanism proper. There are no complicated parts to get out of order and no sliding contacts to become worn by gritty materials.

These pumps are unexcelled for rough and ready service such as contractors require in pumping out excavations, trenches, sewers and quarries. Thousands of them are used for this class of work by contractors, railroads and construction companies.

Large numbers of Carpenter Diaphragm Pumps are also used for bilge pumping on vessels, barges and dredges. Their large capacity and rugged construction make them especially suitable for this service. Mines that use the cyanide process employ Carpenter Diaphragm Pumps for handling slimes and other semi-fluids.

No.	Stroke	Suction	Approx. Capacity per Hour	Approximate Weight in lbs.	Price
2	3 in.	2 ½ in. iron pipe	1800 gals.	127	\$19.00
3	3 in.	3 in. iron pipe	4000 gals.	178	24.00
4	4 in.	4 in. iron pipe	6000 gals.	266	35.00

For repair parts see Edson Repair list. The Carpenter and Edson Diaphragm Suction Pump Parts are interchangeable.

## CENTRIFUGAL PUMPS

Fig. 2301

Horizontal Side Suction Centrifugal Pump

## HORIZONTAL

This Pump is designed and constructed throughout on very liberal lines. The case or shell is of the solid type, very heavy, and the runner of large diameter, adapting the pump for slow speed.

The inside of the case is machine finished, and the runner machined and accurately fitted to it; and our construction gives a closer running fit and greater efficiency than can be obtained in the old style split case.

The shaft is large and the bearings are generously proportioned, and ample stuffing box and gland being provided. The discharge can be readily adjusted at any angle. All parts are accurately interchangeable and any part can be readily duplicated.

Brass fitted pumps have runner and shaft of brass.

These Pumps can be fitted with tight and loose pulleys, if desired, at an extra charge.

No. Pump	Gallons Capacity	Size of Pipe		Pulley		Price Iron	Price Brass	Brass Fitted Extra

Fig. 2302

## HORIZONTAL WITH PRIMER

Same Pump as above with the exception that a hand suction primer is added. At times it is desirable to prime the smaller pumps by hand.

This may be done by opening the air cock at the top of the shell and then using the hand pump on the primer until the water flows from the air cock, when the pump can be started.

On sizes above 8 inch it is advisable to use an ejector and either a foot valve or a flap valve. No foot valve or flap valve is necessary when the hand primer is used.

In this illustration the method of attaching the shell to the hood on the upper pump is clearly shown.

Brass fitted pumps have runner and shaft of brass.

These Pumps can be fitted with tight and loose pulleys, if desired, at an extra charge.

No. Pump	Capacity Gallons	Size of Pipe		Pulley		Price Iron	Price Brass	Brass Fitted Extra
		Discharge inches	Suction inches	Diameter inches	Face inches

## CENTRIFUGAL PUMPS

Fig. 1906  
Side Suction for Electric Motor Drive  
on Cast Iron Base

These Side Suction Centrifugal Pumps are arranged for motor drive and are directly connected to an electric motor. The smaller sizes have both pump and motor mounted on a cast iron bed plate, while the larger sizes have a light steel frame provided instead of a cast iron base.

Flexible couplings connecting the pump and motor shafts can be furnished at an added price when so ordered.

The pump is provided with bracket bearing of the ring oiling type, which is outside of and separate from the stuffing box.

To adapt these pumps to the various motor speeds, special construction is always necessary; therefore inquiries should always state the voltage and kind of current used, amount of liquid to be pumped, and total height to which liquid is to be raised.

Fig. 1906—Sizes, Capacities, Prices, Etc.

No. Pump	Economical Capacity Minute Gallons	Price Iron	Br. Fitted Extra	Price Brass
1	10-30	\$ 70.00	\$ 6.00	\$ 70.00
1 1/2	50-70	80.00	15.00	110.00

5	900-1060	320.00	108.00	.....
6	1800-2000	410.00	130.00	.....

Prices are for pump complete with frame to receive motor, but do not include motor.

FOR MOTORS, SEE INDEX

## CENTRIFUGAL BILGE PUMPS

The illustration to the right shows our Electric Centrifugal Bilge Pump for pumping sewerage, draining basements, etc. It is entirely automatic in its action and, as the shell is constantly submerged in the liquid to be pumped, no priming is necessary. The motor is controlled by a float so arranged that the motor starts automatically when the liquid reaches a given height in the pit, stopping when it is empty. In its construction, the pump, discharge pipe, etc., are supported from the pit-cover, so that all parts of the outfit can be removed for inspection or repair by simply lifting this pit-cover.

The pit may be of iron, brick or concrete at will.

We are prepared to furnish outfits of any capacity to suit any conditions. We solicit inquiries, which should state the character and amount of liquid to be pumped, together with the diameter and depth of pit, total height to which the liquid is to be raised, voltage and kind of electric current.

Fig. 1910—Sizes, Capacities, Etc.

- No. 0—Capacity 30-50 gallons per minute.
- No. 1—Capacity 50-100 gallons per minute.
- No. 2—Capacity 125-200 gallons per minute.
- No. 3—Capacity 250-400 gallons per minute.

Price quoted will cover outfit complete, as shown in illustration, for intermittent service, but does not include pit.

Regular construction is for a pit 5 feet in depth, and 36-inch inside diameter for sizes No. 0, 1 and 2; and 40-inch inside diameter for size No. 3.

Pumps arranged for pits more than five feet in depth will be charged extra.

Prices on special steel and cast iron pits on application.

#### Prices Quoted on Request

In forwarding specifications for quotations, be sure to mention vertical lift in feet wanted, as well as type of motor, number of gallons per minute to be handled.

FOR PIPE AND FITTINGS, SEE INDEX

Fig. 1910  
Centrifugal Bilge Pump in Pit

## CENTRIFUGAL PUMPS

### VERTICAL

**Vertical Submerged Centrifugal Pump with Feet**

This pump is intended to be entirely submerged in the liquid to be pumped and needs no priming. The weight of shaft is entirely supported by the yoke, which has a bearing with adjustment at the top, making a very durable pump, there being no step bearing inside the shell to cut and wear. By simple removing the nuts at the top of the shell, all of the running parts, including the runner, can be lifted out for inspection.

We can supply both these pumps with the discharge elbows increased to the next pipe size at the price of regular pump, when so ordered.

**Vertical Submerged Centrifugal Pump With Timber Pieces**

This pump is arranged with timber castings for bolting to vertical timbers. In irrigation work, where the pumps are usually placed in a pit at a considerable depth, vertical timbers to support the pump shell are usually used.

Contractors frequently use this arrangement in excavations and lower the pump and timber frame in the trench as added depth is required.

No. Pump	Capacity Gallons	Size Discharge Pipe Inches	Pulley		Coupling Bored for Inch Shaft	Price Iron	Price Brass

For Vertical Shaft Bearings, see index.

## SAND AND GRAVEL PUMPS

### CENTRIFUGAL

#### DIRECT CONNECTED

This Gravel and Dredging Pump is connected directly to a Vertical Steam Engine. A direct connected outfit is sometimes preferable to a belted outfit on account of portability, compactness, etc., but as the height to which the pump will deliver depends upon its speed, and as the speed of the pump is limited to the speed of the engine, it can be seen that these outfits are not intended for high lifts.

They are usually used against heads of 15 to 20 feet maximum.

The size of engine to be used is governed largely by the steam pressure to be used.

Fig. 331. Direct Connected

No. Pump	Cubic yards of Solids per Hour Per Cent of Solids			Dia. of Solids Pump will Pass in.	Size of Pipe		Size of Engine		Price
	10%	15%	20%		Disc. in.	Suct. in.	Dia. in.	Strk. inch.	
4	14	21	28	2	4	4	6	6	\$390.00
6	30	45	60	4½	6	6	7	7	510.00
8	60	90	120	6	8	8	9	9	820.00
10	90	135	180	8	10	10	10	10	1050.00
12	125	190	250	10	12	12	12	12	1450.00

Price is for outfit as illustrated, including engine complete with throttle valve, oil cups and cylinder lubricator, together with suction and discharge elbows, flap valve and ejector on pump.

#### BELT DRIVEN

The pump shell is made in one casting, of the over-hung type, and is bolted to the frame in such a manner that it can be easily removed or adjusted to discharge at any angle. A removable disc is fitted to the suction side of the pump which can be readily removed and the piston withdrawn through the opening, without disturbing the pump shell or discharge piping. The frame is made strong and heavy for hard service and the bearings are extra long and ample. The runner is of the enclosed type of large diameter for slow speeds. A special swiveling device allows the suction elbow to be swung to any desired position by simply loosening the nuts.

Fig. 332. Belt Driven

No. Pump	Cu. Yds. Solids per Hr. Per Cent Solids		Size Dis. and Suct. Pipe inch	Pulley		H. P. required each 10 ft. of elevation	Diam. of Solids Pump will Pass, inches	Price

8	60	120	8	24	12	15	6½	475.00
10	90	180	10	30	14	25	8	600.00
12	125	250	12	40	16	39	10	850.00

Prices include suction and discharge elbows, flap valve and ejector.

## "NYE" NEW MODEL DOUBLE CYLINDER HIGH PRESSURE STEAM PUMP

### THE ALL-AROUND CONTRACTOR'S PUMP

For cofferdam and caisson work, quarries, mines, well-point system, paper mills, tanneries, gas and chemical works, refineries, etc.

This Pump is specially designed and adapted for wells or caissons in deep foundation and mining work. No. 2 Pump requires only a space of 20 inches square for installation. Does not interfere with the placing of lagging, as pump is suspended and a 10 foot suction hose is attached to the bottom of pump, allowing ample room for all other necessary operations below point where pump is placed—a very important feature not found in other pumps of similar make.

Guaranteed to deliver water a height of 150 feet, and is the only pump made which will, without injury to same, handle water containing sand or silt.

The Nye New Model Double Cylinder High Pressure Steam Pump creates a high vacuum and therefore has greater suction lift and will discharge to a greater height with greater rapidity and with less steam than other pumps of similar type. It has no pistons or plungers, no engine with gears or other parts to cause trouble. It is impossible for sand, grit or mud to affect its operation. Will suck air and water without losing its priming. Discharges a full, continuous, steady stream. Cylinders are air cushioned. Has no exhaust. Steam is used twice. Automatically takes care of variation in boiler pressure. Has mushroom type spray basket jets. Patent priming device. High discharge velocity. No reciprocating parts. Simple and compact, takes up least space. Handles

Liquids at higher temperatures. Operates at 40 degrees below zero. Shock is eliminated. It will operate equally well suspended or stationary.

The Pump consists of two connected hollow cylinders with discharge chambers at one side, all cast in one piece forming main body of the pump; bottom of these three chambers contains suction and discharge parts. At the top the two cylinders are sealed by steam yoke connection embodying the Nye special spray basket jets. The steam yoke carries two original Nye features, a pair of air valves and a hollow steam valve that floats in its chamber. This valve is extremely simple and sensitive to pressure, vacuum and its own gravity—the operating mediums—and is responsible in a high degree for the steam economy of the Nye Pump. Its function is admission of steam to the filling cylinder in time to aid the air cushion, overcoming shock from ram action of the rising column of water. Following the cushioning function the steam valve admits steam for the discharge. Filling of the alternate cylinder cuts off the supply of steam, permitting expansion of the residual charge, thereby causing discharge from both cylinders simultaneously. The result of this lap of discharge is a sustained momentum. An almost imperceptible increment is the only evidence of the junction of the discharge cycles.

Priming is not required for short suction, but if it is desired to pump air and water at bottom of suction, keeping the water down so that the men can work to good advantage, a small amount of water can be run through the pump continually through angle valve at the back of the pump.

No.	Weight lbs.	Capacity Gals. per Min. Elevations of		Sizes of Pipes, inches			Price Each
		50 ft.	100 ft.	Suction	Discharge	Stm.

8	4,300	3,000	2,000	10	8	3	1,000.00

### NYE SPECIAL SAND PUMPS

For handling silica sand, fine coal, etc., up to 50% of solids. Prices quoted upon request. Specify conditions and describe carefully quantity and nature of materials to be handled.

## THE PULSOMETER STEAM PUMP

Section through pumping chambers

where a pumping outfit is desired which reduces attention to a negligible minimum.

The best answer to these three problems is—the Pulsometer. It has absolutely no mechanically operated parts, the only elements in motion being three check valves, which are enclosed, and operate automatically. It has no packings, glands, springs, or stuffing-boxes, no rubbing surfaces, pistons, gears, or shaft bearings. It consists of one compact unit, can be picked up and set down anywhere,

Section through discharge chamber

and will start off as soon as connections are made and the steam turned on. It needs no special foundation, requiring nothing more than suspension by a chain or rope from an overhead beam or timber.

In permanent installations, it is set up with the greatest ease, and can be moved readily when required (since the only connection is the steam pipe to the boiler), and demands practically no attention.

Although the various types of piston, rotary, and centrifugal pumps adequately meet the ordinary requirements of water, works stations, power plants, industrial plants, etc., they are entirely unsuitable for two great classes of pumping work, viz.,

(a) That in which some sort of rough and ready reliable pump is needed—a pump which can be set up and taken down quickly, one which operates practically without attention, and is not subject to interruptions or excessive wear due to gritty or muddy water.

(b) Permanent installations, where the pump must handle thick, viscous or gritty material.

Contractors require a pump of the "A" type where, in draining a trench or excavation, it may be necessary to set up and operate the pump for short periods in different places, making it impracticable to provide a foundation for the pump. In such cases, like those conditions exist in mines, where it is often necessary to move the pump to fire a blast and then to return it quickly to the same or a new position, to keep the workings free from water. Quarries, building back yards, etc., all have requirements similar to these and furthermore require a pump which will satisfactorily handle gritty water.

Sewage disposal plants, sewage ejection in buildings, paper mills, breweries, and many other kinds of manufactories, require a pump of the "B" type.

There is also a "C" situation—that in water works, etc., where the water handled is free from sand or grit, but

### TYPES OF PULSOMETERS

#### DESCRIPTION

### DESCRIPTION

### Standard Improved Pattern

(Note A.) For all general water-raising service, including handling of liquids containing large percentages of thick mud, grit and sediment, the Standard Improved Pattern Pulsometer, with Regulation Flat Rubber Valves, should be used. This is by far the most efficient type for this purpose.

### Clapper Valve Pattern

(Note B.) This type is intended for handling large percentages of sand. The Clapper Valve Pump is by far the most efficient type for sand handling purposes.

### Ball Valve Pattern

(Note C.) This type is intended for special purposes only, such as pumping Paper Pulp, Slaughter-House Wastes, thick, stringy substances, etc.

### Carborundum Lined Pumps

(Note E.) For handling water carrying abrasive material, such as is found in mines, etc. These are not carried in stock.

## What We Furnish

Each Pulsometer is furnished complete with our special added Improvement, either Basket or Mushroom Strainer, Steam and Relief Valve Connections and Pump Hook for suspending when necessary. In fact, the above prices include everything necessary to attach to steam and water pipes—ready to run. No piping. See index for piping and fittings.

## CAMERON SINKING PUMPS

This is the most successful Sinking Pump that has ever been placed on the market. Any steam pump that is to be used in sinking a mine shaft must be strong, certain in operation, capable of handling gritty water, require little attention, and above all, be able to stand the roughest kind of usage without sustaining injury.

This Pump retains all the advantages of the horizontal types of Cameron Pumps besides having several features of importance for a sinking pump. It has no exposed parts liable to breakage; it takes up less room in the shaft than any other make of pump; it cannot be damaged by collision with the side walls; it is not likely to be injured by blasts; and it is designed and intended to handle gritty water.

Capacities, heights in feet and equivalent pounds pressure to which pumps will discharge with steam or air pressure as given at pump.

## BLAKESLEE DUPLEX STEAM PUMPS

**You Run no Risk.** They are guaranteed to give satisfaction. If they fail to do so, return to us and get your money. **Water Pistons** are arranged for square packing—easily and cheaply renewed. **Rocker Arms and Shafts** are of steel. **Frames and Cradles** are trough shaped and catch all drip from the stuffing boxes. **Water and Steam Cylinders** are cast separate so in case of breakage the part can be replaced at small cost. **Water Valve Rubbers** are of hard or soft rubber as desired. **All Pipe Connections** larger than 2 inch are flanged. **Water Cylinder Linings** are brass and are removable. **Water Valve Seats, Stems, and Springs** are of brass. **Stuffing Boxes**

will take ample packing to prevent leakage. **Water Passages** are all direct and valve area is ample for quiet operation when running fast or slow. **Water Valve Chamber Cap** is held in place by stationary studs and when removed both suction and discharge valves are exposed. **Steam Piston Heads** are light cored castings and are provided with self-adjusting packing rings. **Cross Heads** are of the spool type. **Steam Chest** is cast separate from steam cylinder and held in place by stationary studs. **Valve Stems** are of cold rolled steel and are provided with bearings inside of steam chest. **Valve Stem Stuffing Boxes, Followers and Nuts** are of cast bronze.

### 4 1/2 x 3 x 4 DUPLEX PUMP

This pump will feed up to 150 H. P. boiler. Has 1/2 inch steam pipe, 3/4 inch exhaust pipe, 2 inch suction and 1 1/2 inch discharge. Shipping weight 380 lbs. Floor space 31x14 inches. Maximum capacity 1440 gals. per hour. Water cylinders are brass lined. Shipped complete with drain cocks for steam cylinders, drip plugs for water cylinders, packing wrenches, 2 inch plain lubricator, packed ready to work.

Price ..... \$55.00

### 4 1/2 x 4 x 4 DUPLEX PUMP

This pump is for filling tanks and forcing water under low pressure and has a maximum capacity of 2640 gals. per hour. With 50 lbs. steam at the pump it will force water up to 75 ft. high. It has 1/2 inch steam pipe, 3/4 inch exhaust pipe, 2 1/2 inch suction and 2 inch discharge. Floor space 37x17 inches. Water cylinders are brass lined. Shipped complete with drain cocks for steam cylinders, drip plugs for water cylinders, packing wrenches, 2 inch plain lubricator, packed ready to work.

Price ..... \$65.00

### 6x4x6 DUPLEX PUMP

This pump will feed from 150 H. P. to 450 H. P. Boiler. Has 1 inch steam pipe, 1 1/4 inch exhaust pipe, 3 inch suction and 2 inch discharge. Shipping weight 700 lbs. Maximum capacity 3900 gals. per hour. Floor space 43x17 inches. Water cylinders are brass lined. Shipped complete with drain cocks for steam cylinders, drip plugs for water cylinders, packing wrenches, 2 1/2 inch plain lubricator, packed ready to work.

Price ..... \$75.00

### 6x5 1/2 x 6 DUPLEX PUMP

This pump is for filling tanks and forcing water under low pressure and has a capacity of 7200 gals. per hour. With 50 lbs. steam at the pump it will force water 75 ft. high. It has 1 inch steam pipe, 1 1/4 inch discharge pipe, 4 inch suction and 3 inch discharge. Water cylinders are brass lined. Floor space 45x20 inches. Shipped complete with drain cocks for steam cylinders, drip plugs for water cylinders, packing wrenches, 2 1/2 inch plain lubricator, packed ready to work.

Price ..... \$95.00

## BOILER FEEDERS

No. 1 1/2 Pump

Nos. 2, 3, and 4 Pumps

The sizes listed represent the standard feed pumps for working pressures not exceeding 175 lbs. per square inch. Sizes to No. 4 inclusive, are fitted with inserted brass tube linings, while sizes No. 4A and upwards, have the cast brass removable type. Nos. 2, 3 and 4 can be fitted with this style at slight additional cost.

Pumps are furnished both Regular and Brass fitted. Regular fitted Pumps have brass water cylinder linings, iron fibrous packed pistons and steel rods. Brass fitted have in addition to the brass linings, brass pistons, brass or brass lined packing glands on Pump end and Tobin bronze rods.

## HAND SUCTION PUMPS

GALVANIZED WROUGHT IRON

Fig. 226A. Length Measured Over All

Pumps 5 feet in length by 3 inches in diameter and larger, are made of spiral tubing as illustrated with a flared suction end and flared open top, making them more desirable for heavy work than the straight pump. Length is measured over all.

All pumps 3 inches in diameter or less, and shorter than 5 feet, are made of straight tubing and fitted with a cap to keep the water from coming out at the top of the pump. Length under spout.

Length	20 inches Each	24 inches Each	30 inches Each	36 inches Each	48 inches Each	5½ feet and longer, per foot

## TURRET TANK PUMP

## A Good Cheap Iron Pump

All valves on top can be quickly repaired by taking out the bolts in top casting. Suction on top, keeping valves always primed. Combination spout and air chamber can be turned in any direction by loosening the nut. Open and direct waterways for quick and easy work.

A left-hand pump by changing end caps. Suction 2 inch. Discharge 1 inch.

Fig. 227A

Each .....\$10.00

## TRANSFER PUMP

For transferring oils and other liquids from steel barrels. Many devices have been placed upon the market for transferring liquids from one barrel to another receptacle; usually they have been short lived, easily damaged and put out of order. This pump is designed for unlimited service and will last indefinitely. It is substantially built with an all-brass cylinder, 1½-inch diameter, 12 inches long. All brass plunger, brass ball valves and brass seats. To the vertical discharge pipe is attached an adjustable iron plug which screws into the bung of all steel barrels. When screwed into place it is rigidly fastened with set screws.

It is exceptionally well adapted for use as a bilge pump for motor boats, etc. A large amount of water may be bailed out in a short space of time.

Fig. 45

Weight, net, each, 7 pounds.

Price .....\$4.00

## PLUNGER, SIPHON AND BILGE PUMPS

## STANDARD PLUNGER POWER PUMPS

The pumps numbered from one to nine are furnished with brass check valves, and the valves can be arranged so as to pass the liquid through the cylinder in either direction as may be desired.

The No. 2A and 3A pumps are same capacity as Nos. 2 and 3, respectively, but are special, being back-gearred for better driving from higher speeds. These sizes are also furnished direct connected to motors.

All sizes to number nine inclusive are vertical single-acting outside packed plunger type.

Standard pumps are adaptable to all kinds of pumping and are especially desirable for this kind of a pump for a continuous service.

As boiler feeders all the Standard Pumps are built for pumping against the ordinary pressure carried on the boilers for which they are rated in the table, and are far more economical than any other kind of pumps.

All these pumps can be run in either direction, and they can be run somewhat faster than given in the table when working against low pressures, but do not run them too fast and try to make any pump do the work of a larger one. Your pump will do better work and last longer when run at a medium speed.

12	5 $\frac{1}{2}$	8	2D 2 $\frac{1}{2}$ S	20x5	200.00	500	850	4500

The capacities are rated at fifty strokes per minute. Numbers 1 to 9 inclusive are single acting; numbers 11 and 12 are double acting; numbers 2A and 3A are geared 5 to 1; numbers 8 and 9 are geared 4 to 1; numbers 2A and 3A are geared like 8 and 9; numbers 11 and 12 are geared 6 to 1.

All Standard Pumps are furnished with only one pulley. Furnished with tight and loose pulleys when desired at a slight advance in price.

## STEAM SIPHONS

**STEAM**—The Siphon will work with anything over 7 lbs. pressure. For pressure below 30 lbs. the low pressure siphon should be used, to obtain the best result, but the high pressure can be used with less than 30 lbs.

**HEIGHT**—The Siphon will raise water about one foot for each pound pressure of steam at the pump. If the fluid is heavier than water, this estimate must be reduced.

**CAPACITY**—The capacity of each size as given in the price list is based upon 60 lbs. steam pressure at the pump and 15 feet lift. With a greater lift or less steam, these capacities will be reduced.

## PUMPS

## "STAR" ANTI-FREEZING FORCE PUMP

For Wells 30 Feet Deep

This pump is built with revolving top, fitted with air-chamber tube and brass gland. The polished rod connects to the lever with a link. An outlet is provided back of the spout, tapped for iron pipe connection. The stock is tapped for pipe near the spout. Spout is flanged and bolted and furnished with nut and hose tube. Pump as listed is 4 feet long from base to bottom of the cylinder and is suitable for wells about 30 feet deep. If wanted for wells of greater depth, add sufficient pipe and rod between base and cylinder to place the cylinder within 15 feet of the water. We recommend the use of foot valve and strainer with this pump.

No. 852½

No.	Cylinder	Stroke	Cap. per Stroke	Suction Pipe	Discharges		Lift and Force	Approx. Wgt. in lbs.	Iron Cyl. Price	Brass Lined Cyl.
					Pipe	Hose				
3	2 ¼ x 10	6	.15	1 ¼	1 ¼	¾	70	79	\$11.85	\$13.85
4	3 x 10	6	.18	1 ¼	1 ¼	¾	60	80	11.85	13.85
6	3 ½ x 10	6	.25	1 ½	1 ¼	¾	50	91	13.10	15.60

## "EMPIRE" DOUBLE-ACTING FORCE PUMPS

Lift and Force 75 to 100 Feet

The "Empire" Double-Acting Force Pumps are adapted for shallow or deep wells. The upper cylinder is brass lined and has differential plunger. Stuffing boxes and glands are dispensed with, thus avoiding undue friction. The pump is furnished complete with brass lined or brass body lower cylinder, with "Universal" bronze valve and seat, and "Universal" bushing. No. 2 pump will go inside of 4 ¼-inch well casing; No. 4 pump will go inside of 5-inch well casing. Unless otherwise ordered, we ship these pumps arranged for shallow wells with lower cylinder screwed to the upper cylinder.

The "Universal" bushing, and top cap of the lower cylinder, strainer and hose connection are tied to the pumps. The set length from base of the standard to bottom of the lower cylinder is 65 inches, and adapted for wells 30 feet deep. If required for deeper wells, unscrew the lower cylinder, attach top cap to lower cylinder, place "Universal" bushing in bottom of upper cylinder, and connect the two cylinders with sufficient pipe and rod to place the lower cylinder within 15 feet of the water—preferably submerged. Strainer and hose connection are included in prices.

No.	Lower Cylinder in.	Stroke in.	Cap. per Stroke gal.	Suction Pipe in.	Approx. Wgt. in lbs.	Well Rod, in.	Lift and Force ft.	Brass Lined Cyl. Price	Brass Body Cyl. Price
2	2 ½ x 12	5	.11	1 ¼	98	¾	100	\$18.00	\$19.25
4	3 x 12	5	.15	1 ¼	105	¾	75	18.00	19.25

## HAND ROTARY BARREL PUMPS

A very reliable rotary pump for handling fluids of all kinds. Is used very much in the transferring of liquids from original containers to tanks and reservoirs. It is fitted with a device which holds the suction pipe rigidly in the bung hole of a barrel and will fit any size bung hole from 1 ½ to 4 inches in diameter.

No.	Gals. per Min. Rev.	Suction, Inches	Discharge for Hose, Inches	Wt., Lbs.	Bronze Price	Iron Price
1	13	1	1	45	\$47.20	\$15.50
2	14	1	1	55	52.00	18.00
3	17	1 ¼	1 ¼	65	60.00	21.00

Price includes 3 feet of suction pipe, hose coupling, hook and patented holder, but no hose. See index for hose.

## HAND PUMPS

## PITCHER SPOUT PUMP

For Suction Lift of 25 Feet

Fig. 205 1/2

Cross-Section of White  
Bronze Valve Seat

No. 205 1/2. Standard closed top Pitcher Spout Pump. A low priced, substantial pump for use over cisterns or shallow wells. The bearer top is secured to the cylinder with a set screw. A nut tapped for iron pipe is supplied on the threaded hub beneath the "G" base. If lead pipe is to be used, a soldering tube that fits inside this nut can be furnished at an increase of \$0.15 in the list price. Can also be fitted with brass suction tube and valve seat, and nut threaded for iron pipe (\*HIP construction) or with brass suction tube and valve seat with tube for lead pipe (\*HLP construction) at extra cost. For "HIP" construction add \$0.50 to the list prices for the Nos. 1, 2 and 3 sizes, \$1.00 for the Nos. 4 and 5 sizes and \$2.00 for the No. 6 size. For the "HLP" construction add \$0.75 to list prices for the Nos. 1, 2 and 3 sizes, \$1.50 for the Nos. 4 and 5, and \$3.00 for the No. 6.

## "STAR" ANTI-FREEZING LIFT PUMP

For Wells 30 Feet Deep

No. 1018. A medium-priced Well Lift Pump for outdoor cisterns and wells, either dug or drilled. The lever and rod are connected with a cross-head and bolt. Standard is tapped for iron pipe, and pump as listed is 4 feet long from base to bottom of cylinder. Pump is adapted for wells about 30 feet deep. If a pump is wanted for wells of a greater depth, add sufficient pipe and rod between base and cylinder to place the cylinder within 15 feet of the water. We recommend the use of a foot valve and strainer with this pump. The cylinder furnished with this pump has the lower attachment fitted with a raised white bronze valve seat. Illustrated above.

No.	Cylinder inches	Stroke inches	Capacity per Stroke gallons	Suction Pipe inches	Approx. Weight in lbs.	Iron Cylinder Price	Brass Lined Cylinder Price
4	3x10	6	.18	1 1/4	60	\$6.85	\$8.85

## HAND ROTARY FORCE PUMP

With Pedestal Base

Will draw water or similar liquids 15 feet, and force to an elevation of 75 feet. By removing the cap on upper discharge, and placing it at end of spout discharge, pipe can be connected for elevating water. Fly wheel is 14 1/2 inches in diameter. Pedestal elevates pump to convenient operating position. Pump can be operated at the rate of 75 revolutions per minute by the average man.

FOR PIPE AND HOSE, SEE INDEX

## TRENCH BRACES DUNN SAFETY EXTENSIBLE BRACES

Considering the high price of lumber and quantity lost or destroyed on every job, our Braces are far cheaper, as well as safer, than the old style wooden struts, which are difficult to wedge in position, and always uncertain and dangerous.

The "Dunn" Brace is light and strong, and is easily adapted to any width of trench by changing the piece of tubing which is standard pipe. The screws have double threads, giving quick travel to the lever nut.

All parts are of the best grade of materials, securely fitted together. Screws are wrought iron, and all other parts refined malleable iron. Each brace is fitted with a ball and socket shoe at each end, so that the brace takes a firm bearing if placed at an angle. Bearing surface of the shoe contains lugs which hold firmly to the planking when the brace is tightened, so that accidental dislodgment is practically impossible.

### HOW TO ORDER

Length of braces are listed overall and when closed. Take extreme width of trench, deduct for planking on both sides of trench, (usually about 8 inches) and several inches more for variations in cut, and remainder will give size of brace wanted, the screw being extended to tighten brace in position.

For combination Screw and Timber Brace Fittings, give size of screw and cap wanted. We do not furnish timbers. (Be careful to bore timber straight so that screw won't bind.)

Standard With 1 1/2 Inch Screw and 1 1/2 Inch Pipe

Length Closed Inches	Length of Screw Inches	Weight Per doz. lbs.	List Price Per doz. Complete
16	11	206	\$23.00

With 2 Inch Screw and 2 Inch Pipe—Extra Heavy Pattern

36	18	542	\$51.00
42	18	564	52.00
48	18	586	53.00
54	18	608	54.00
60	18	620	55.00

### Safety Limit of Extension 6 to 10 Inches

#### According to Length of Brace

Lengths given are overall and when closed. Special sizes made to order.

### FITTINGS FOR DUNN COMBINED SCREW AND TIMBER BRACE

Can be used in any width of trench from 2 to 30 feet. It will be found especially valuable in wide and deep trench and foundation work. It can also be used to good advantage in small trench work.

When required we can also furnish caps for the butt end of the brace. Unless otherwise stated in order, all orders will be filled with the single cap.

### We Do Not Furnish Timbers

Size of Screw Inches	Size of Cap or Washer Plate Inches	Weight Per doz. lbs.	List Price Per doz. sets	Butt End Caps Per doz.
1 1/2 x 14	4 x 4	175	\$18.00	\$ 3.00
1 1/2 x 14	6 x 6	192	20.00	4.00

### "DUNN" BRACE FITTINGS

Shipped Ready for Pipe to be Attached

Cut Pipe 7 Inches Shorter than Length of Complete Brace Wanted, when Closed

Size of Screw Diameter Inches	Length Inches	Weight Per doz. lbs.	List Price Per doz. Complete
1 1/2	12	185	\$26.00
1 1/2	14	192	21.00
1 1/2	16	204	22.00
1 1/2	18	208	23.00
2	18	440	45.00

We furnish our Braces in this form to parties who wish to put on pipe to suit themselves. Simply the plain pipe is required for the barrel, no machine work being required other than to drill the small hole in one end of pipe to permit of the insertion of cotter pin which holds the brace together. This cotter pin may be removed at any time and longer or shorter pipe substituted, to make the brace suit any width of trench.

Use 1 1/2 Inch Pipe for the 1 1/2 Inch Screws, and 2 Inch for the 2 Inch Screws

# GEO. B. CARPENTER & CO.

## BRASS JACKET DRIVE WELL POINTS

221

### Made of Wrought Pipe, Galvanized

These illustrations show a completed well point and a point before gauze and jacket are put on. Brass Jacket points are made of standard wrought pipe. They are punched with elliptical-shaped holes of uniform size, equal distances apart, and contain the largest number of holes permissible, while retaining the strength requisite for driving. The driving plug is a malleable casting, swaged into the pipe and riveted. These points are covered with brass wire cloth, which is protected by a heavy perforated brass-jacket. We can furnish points covered to order with numbers 20, 30, 40 or 50 gauze. Numbers 20 and 30 take the same list as number 70. Numbers 40 and 50 take the same list as number 60. Sizes and lengths not listed will be furnished at proportionate prices. All points when completed are wrapped in paper, and the plugs, in the case of wrought points, are painted to prevent rusting.

Please order by trade number, stating mesh of gauze.

FOR WELL POINTING PUMPS AND ENGINES, SEE INDEX

## FLUSH OR TUBULAR WELL POINTS

Please order by trade number, stating mesh of gauze.

These Tubular Well Points are made in the same manner as Brass Jacket Drive Well Points. The plug is a solid casting securely riveted to enable point to be driven from the inside.

### PIPE PULLER

Fig. 624

This pipe puller is arranged to draw all sizes of pipe and not to crush it. It is large enough in diameter for the coupling of the pipe to pass through. One set of any size dies are furnished with puller without extra charge.

Extra sets of dies are furnished at same discount from list as puller.

### BABCOCK PIPE LIFTER AND HOLDER

For raising and holding pipe and lowering same into a well.

Fig. 143

Showing Machine as used in Raising Pipe

Holder will not tear or damage the pipe. Simple and rapid in its operation. Handles pipe from 1 to 2 inches, inclusive.

Price, complete .....\$6.50

## IRRIGATION STRAINERS—DEEP WELL CYLINDERS

### IRRIGATION STRAINERS

These Strainers are made of heavy pipe, galvanized after the holes are put in. They are covered with a special woven wire cloth, having slotted openings and admitting twice as much water as ordinary gauze. The cloth is nearly one-sixteenth of an inch in thickness, and is so constructed that every part of its surface permits of filtration.

These Strainers are much stronger and more serviceable than all brass Strainers, and can be used in wells having heavy pressure or suction without injury to the wire cloth.

For efficiency, heavy work and large filtering capacity these Strainers have no equal.

Furnished with open ends, unless ordered with driving plug. Six inches blank on each end of Strainer.

#### PRICE PER LINEAL FOOT

## DEEP WELL BRONZE BALL VALVE CYLINDER

No. 860

These Cylinders are designed for use in deep wells, and are made of best material and heavy throughout. They have four leather bronze ball plungers and double check valves, one a bronze ball, the other a flat poppet, making a leak impossible. For extremely deep wells we recommend these Cylinders.

Made with outside caps only.

FOR PUMPS, ENGINES AND PIPE FITTINGS, SEE INDEX

## ARTESIAN WELL EQUIPMENT

### ALL-BRASS ARTESIAN WELL CYLINDER

With Spool or Ball Valves

No. 449

The body of this cylinder is seamless brass tubing. The valves are made sufficiently strong to withstand severe service. The leather packings are the best. The bottom of the plunger is tapped so that it may be screwed on the top of the check valve, thus enabling the plunger and check valves to be withdrawn at one operation. Both valves are fitted with heavy leather faced spool poppets, or with balls. This cylinder may be placed in open wells and in drilled wells where the pipe or casing is large enough to take the cylinder attachments. It is adapted to work in deep wells and to stand severe service.

Furnished with spool valves unless otherwise ordered.

## WELL CYLINDERS, PUMP EQUIPMENT

Fig. 440

WROUGHT-IRON TUBULAR  
WELL CYLINDER

No. 440

This cylinder is made of either galvanized or black extra strong wrought pipe, bored and polished. Unless otherwise ordered it will be furnished with a shoulder for holding a turned coupling for seating the check valve. In 24 and 36 inch lengths the shoulders are 3 inches from the bottom, and in 48 inch lengths, 12 inches.

A galvanized cylinder without a shoe will be furnished unless otherwise specified.

## PRICE LIST

Please order by figure number.

Fig. 441

BRASS LINED TUBULAR WELL  
CYLINDER

Galvanized. No. 441

This cylinder is made of wrought pipe bored out, with a lining of seamless brass tubing swaged into position. This cylinder possesses the smoothness of an all-brass-tube cylinder, and is not as liable to become injured by external pressure or sudden jars. For the small additional cost it pays to use this cylinder instead of the polished iron, as the pump will work more easily and the leathers on plunger will wear longer.

Unless otherwise ordered this cylinder will be furnished with a shoulder three inches from the bottom as illustrated.

## PRICE LIST

4	6.00	8	18.00	16	110.00

Shoes for well casing will be supplied at same list, intermediate sizes being charged at price of next larger size.

## WELL PACKER

## No. 495

A well packer for making tight joint between strainer and well casing; it is also used as support for cylinders.

To locate strainer in well, screw well packer on upper end of same, attach seating tool to drill rod and insert into key seat in well packer, lower all in well to place where strainer is to be located, turn drill rod to the right which forces taper wedge into rubber ring, expanding same and making tight joint.

To remove strainer from well, lower seating tool to key seat in well packer, turn to left, partly unscrewing taper wedge from coupling, which contracts rubber packer and permits strainer to be withdrawn.

## LUMBER ROLLERS

Fig. 741. Iron Side Roller

The best and cheapest device on the market for quickly and cheaply loading and unloading lumber cars. We have in two lengths, regular and extra length; both are made of two inch pipe. Length of roller, 15 inches.

## Regular Length

Length of iron pipe, 4 feet. Length of screw, 16 inches. Entire length, 5 feet 4 inches .....each \$10.00

## Extra Length

Length of iron pipe, 4 feet 6 inches. Length of screw, 16 inches. Entire length, 5 feet 10 inches .....each 10.80

Fig. 742

## DOUBLE EXTENSION LUMBER ROLLER

This new double extension lumber roller can be instantly attached to not only any size door from 5 to 8 feet wide but also the ends of a gondola. Being made of a high quality 2 inch steel tubing it will not sag under any reasonable load even when fully extended. It is equipped with a square thread  $1\frac{1}{2}$  inch steel screw on one end and a 3 foot beam on the other, which fits snugly into the main  $4\frac{1}{2}$  foot beam, being held in place by a pin. The roller is easily adjustable to any position.

Besides the Saving in Breakage, the Time Saved Alone Will Soon Pay for the Roller

With 18 inch wood roller .....each \$11.50  
With 16 inch iron roller ..... " 12.00

Each ..... \$2.50  
 Per pair ..... 5.00

Fig. 737

## ELECTRICAL CONSTRUCTION PIKE POLES

Fig. 808

All our poles are made of soft, old growth, yellow Washington Fir, free from defects, absolutely straight grained and running from 14 to 18 annular rings to the inch. This fir has proved to be lighter and stronger than any other kind and it does not easily splinter off in the user's hands as do the hard, brittle varieties. It costs a little more than other kinds, but it is well worth it. All poles are nicely sanded before leaving the factory. The pikes are of genuine hand-forged crucible steel with a long taper and screwed in.

Fig. 820

## WESTERN ELECTRIC PATTERN

These poles are 2 1/2 inches in diameter in the middle and taper to 2 inches at each end, giving the strongest and most efficient pole on the market. The extra strength is in the middle, just where it is needed.

The pike is of 5/8-inch square crucible steel projecting 4 inches from the end of the pole and with a 2-inch taper. The pike is securely held in the pole by a 3/4-inch rivet running through the ferrule, pole and pike itself. We cannot recommend this pole too highly.

FOR OTHER STYLES OF ELECTRICIANS' TOOLS, SEE INDEX

## TREE TRIMMERS

Fig. 912

Fig. 917

These trimmers are heavily constructed of a malleable iron socket and hook, to which is bolted the tool steel cutting knife, which is an integral part of the operating lever. This knife is operated by a rope either attached to a lever or loose, as desired. The knife automatically springs back into a cutting position when the limb is cut, being operated by a flat steel coil spring. This trimmer is somewhat heavier than others, but is just that much more efficient and will stand up under just that much harder work, and will easily cut a limb  $1\frac{1}{2}$  inches thick.

It comes either without saw, 18 inches over all, or with saw, 26 inches over all. Threaded holes are provided on the trimmer with the saw in order that it may be used without the saw if desired or new saws put on in case of breakage. The socket is tapered slightly to provide for a tight drive fit on the pole. Handles of Washington Fir,  $1\frac{3}{4}$  inches in diameter in lengths of 12 to 18 feet.

## Order by Number

No. 912.	Trimmer, no saw, weight per doz. 50 lbs.	per doz.	\$30.00
No. 917.	Trimmer with saw, weight per doz. 60 lbs.	"	40.50
	Extra saws only	"	12.00

No. 916.	18 foot, $1\frac{3}{4}$ inch diameter, wt. per doz. 140 lbs.	"	16.25

## Tree Trimmer Handles—Two Piece with Brass Ferrule

No. 918.	12 foot, $1\frac{3}{4}$ inch diameter, wt. per doz. 90 lbs.	per doz.	\$20.00
No. 919.	14 foot, $1\frac{3}{4}$ inch diameter, wt. per doz. 110 lbs.	"	21.25
No. 920.	16 foot, $1\frac{3}{4}$ inch diameter, wt. per doz. 130 lbs.	"	23.25
No. 921.	18 foot, $1\frac{3}{4}$ inch diameter, wt. per doz. 150 lbs.	"	26.25

## POST HOLE DIGGERS

Eureka Pattern

Eureka pattern. Half round handles; steel blades; size  $9\frac{3}{4} \times 4\frac{3}{4}$  inches; 14 gauge. Digs holes 6 inches diameter. Handles 4 feet long. Weight per doz., 120 lbs. Packed three to a bundle.

Price per doz. \$24.00

G. B. C. Pattern

G. B. C. Steel blades. Malleable handle sockets bolted to round hardwood handles 4 feet long. Blades  $9\frac{3}{4} \times 4\frac{3}{4}$  inches; 14 gauge. Digs holes 6 inches in diameter. Weight per doz., 120 lbs.

Price per doz. \$24.00

## POST HOLE AUGER

Made with hollow steel tube stem, with steel boring blades and point. A proved auger for boring holes under ordinary conditions.

Fig. 885

No.	Diameter inches	Stem feet	Wt. lbs.	Price each
885	6	$3\frac{1}{2}$	5	\$2.00
886	8	$3\frac{1}{2}$	5	2.00
887	10	$3\frac{1}{2}$	6	2.00
888	12	5	13	7.20
889	14	5	14	8.00

## RAILROAD SCUFFLE HOES

Special forged steel tempered blade, bronze finished steel cap. Selected straight 5 foot handle. Heavy malleable shank. Size of blade  $4 \times 8\frac{1}{2}$  inches. Weight 46 lbs. per doz.

Price per doz. \$15.00

## THE OSHKOSH POLE ANCHOR

THE ONLY PERFECT ANCHOR ON THE MARKET  
FOR ANCHORING ALL STYLES AND KINDS OF POLES

Fig. 93S Expanded

It is thoroughly automatic—requiring but one man to set it and no extra tools.

It has the widest expansion in virgin soil of any anchor made—which means “maximum resistance with minimum digging.”

Principle of expansion is best, because, depending on the strain to expand it, its dependability increases (instead of decreases) as emergency strains are placed upon it.

It cannot be carelessly set. If for any reason it is left in a partially expanded position, when a greater or emergency strain is placed upon it it will continue to expand until completely expanded, when it will take the maximum resistance of the soil to affect it.

Fig. 93SA Closed

Its peculiar construction will permit it to be used in rocky soil where other anchors fail.

Owing to the convex top surface of the blades, it exerts a great resisting force, as the force is diffused outward, affecting a wider range of soil than any other anchor. As lines of resisting force are always vertical to the plane of the point of contact of force, the resisting force to the passage of this anchor through the soil is fan-shaped—concentrating on the anchor blades.

Inasmuch as anchors are placed for holding power not only under ordinary conditions, but in emergency cases, it would seem that this anchor, which has the greatest holding power and ability to absorb strain, should appeal to you, and any other consideration, such as first cost or method of expansion should be relegated to second place.

Comparison of expanded areas of Oshkosh Anchors with other makes:

	4 in. size	6 in. size	8 in. size	
Oshkosh, expanded.....	11 in.	16½ in.	22 in.	in 4 ways
Other makes, expanded.....		11 in.	15 in.	in 2 ways only
No. 934. 4 inch size, wt. 5¼ lbs.....				each \$0.85
No. 936. 6 inch size, wt. 11 lbs.....				“ 1.00
No. 938. 8 inch size, wt. 20 lbs.....				“ 1.50

FOR ANCHOR RODS, GALVANIZED STRAND AND ROPE FITTINGS, SEE INDEX

## POST OR SEWER DIGGERS' MAULS

BARK COVERED

Fig. 700

With extra selected hickory handles, clear through head. Handle has enlarged, or swelled end, making it impossible for maul head to come off.

Mauls are bark covered; ends are bound with extra heavy forged rings.

Sizes, inches.....	7x9	6x12	7x12
Price each.....	\$3.50	3.90	4.30

## POST OR SEWER DIGGERS' MAUL HANDLES

Extra handles for above Mauls.....per doz. \$5.00

FOR IRON MAULS, SEE INDEX

**Fig. 1609-20**  
Galvanized finish.

## GENUINE KLEIN ELECTRICAL CONSTRUCTION TOOLS

### GENUINE KLEIN'S "COME LONG" GRIP

No.	Size	Weight per doz.	Price per doz.
1609-20.	For No. 8 wire and smaller.....	12 lbs.	\$ 8.00
1609-30.	For No. 6 wire and smaller.....	24 lbs.	10.00
1609-40.	For No. 0 wire and smaller.....	27 lbs.	12.00

### GENUINE KLEIN'S IMPROVED HAVEN'S GRIP

**Fig. 1625-20**

No.	Weight per doz.	Price per doz.
1625-20.....	69 lbs.	\$55.75

Improved Klein Haven's Grip adapted for handling plain or stranded wire from No. 6 to 3/4 inch in diameter.

The particular feature of construction is the addition of a swing latch which engages with stud on the lower jaw, this centralizes the pressure on the cross-bolt, which is strongly made of turned machined steel. The body and handle of this clamp are made of steel forging and the eccentric of hardened steel. This tool is the outgrowth of a demand for a clamp to accommodate larger than 1/2 inch wire cable.

### GENUINE KLEIN'S "CHICAGO GRIP"

**Fig. 1613-20**

No.	Size	Weight each	Price each
1613-20.	For No. 10 wire and smaller.....	1 lb.	\$ 4.50
1613-30.	For No. 6 wire and smaller.....	1 1/2 lb.	5.00
1613-40.	For No. 0 wire and smaller.....	2 5/8 lbs.	8.00
1613-50.	For No. 0000 wire and smaller.....	7 1/2 lbs.	12.00

The Chicago Grip is made entirely of steel. The main body piece and lever are steel, drop forged. The draw parts are wrought steel. The gripping jaws are machined smooth. Rivets are machine turned and the workmanship throughout is first class. The grip was designed primarily for use on copper wire but will work equally well on iron or steel wire. It pulls straight without leaving kinks in the wire. It is handy to put on and holds itself in place by a string actuating on the compressing lever. Use this grip on your most exacting work.

### KLEIN'S COMMON PAY-OUT REEL

**Fig. 4600-1**

### KLEIN'S PAY-OUT REEL ON BARROW

#### LIGHT REEL—For Telephone Work

No.	Weight each	Price each
4601-1.....	80 lbs.	\$16.00

Constructed of hard wood and reinforced with steel plates. The barrow is supported by substantially made steel legs side braced and bolted through the wood. Built to stand hard usage. Guard Pins are adjustable for 12 inch, 18 inch or 24 inch Coils.

**Fig. 4601-2**

No.	Weight each	Price each
4600-1.....	40 lbs.	\$10.00

Substantially built of hard wood and reinforced with steel plates. A good reel for the repair wagon.

We also furnish reel spools with turnpin and disk, without base, for wagon reels or for multiple stringing. Guard Pins are adjustable for 12 inch, 18 inch or 24 inch Coils.

**Fig. 4601-1**

### HEAVY REEL For Electric Light Work

No.	Weight each	Price each
4601-2.....	90 lbs.	\$20.00

All wood parts are made of oak mortised and bolted together and reinforced with steel plates. Carried on strong well braced legs bolted through the wood. The guard pins are adjustable for 12 inch, 18 inch or 24 inch Coils. Built to stand hard usage.

FOR OTHER ELECTRICAL TOOLS, SEE INDEX

## DIGGING BARS

Our bars are all hand-made of specially selected crucible steel. It is a waste of money to purchase cheap bars, for they will bend or break on the first hard job; or, if they are too brittle, the digging blade will chip off. The steel that goes into our bars is rolled for just this purpose and the small additional cost to the user is more than justified by the additional service derived.

## CROW AND DIGGING BARS

## DIGGING SPUD WITH TAMPER

Fig. 852

Order by number

An especially fine all-steel digging and tamping tool. The handle is of steel pipe and the tamping head and blade are shrunk onto the handle, there being no possibility of either working loose. The blade and its socket are one piece of forged crucible steel.

No. 852. 9 foot long, weight 234 lbs. .... per doz., \$45.00

## LOY OR SLICK

Fig. 853

Order by number

The most useful construction tool made for digging post holes. The handle is of 2-inch select maple and the blade is of tool steel 4 inch x 1/2 inch burned onto the handle and held by two large rivets. The blade being off to one side gives great leverage when prying. These can be had in any length not listed.

No. 853. 8 foot handle, weight 210 lbs. .... per doz., \$40.50

TAMPING BARS  
With Heavy Iron Shoe

Fig. 854

Order by number

Made with select 2-inch maple handles with a 1 1/4 x 1/4-inch steel shoe securely riveted on them. A strong and serviceable tool.

No. 854.	7 foot handle, weight 150 lbs.	..... per doz.,	\$18.50
No. 855.	8 foot handle, weight 170 lbs.	..... per doz.,	20.00

Fig. 842 POLE SUPPORTS  
Wooden Jenny Pole Supports

The 6-foot is made of 2-inch by 3-inch and the 7-foot and 8-foot of 2 1/2-inch by 3 1/2-inch rock maple, carefully selected. The entire support is heavily bolted and braced. The fork is of hand-forged crucible steel. These are light, strong and not expensive.

# HEAVY THICK MORTISE WOOD SHELL IRON STRAPPED BLOCKS

Harcourt's Patent

For Manila Rope

With Extra Heavy Loose Side Hooks and Straps. Double Cross Bolted Shells  
Hooks Flattened When so Ordered

Fig. 552

Fig. 553

Fig. 554

These Blocks are Adapted for Railroads, Mining, Bridge Building and Contractors' Work

The five-roller bushed blocks are the strongest roller bushed blocks made. We recommend our self-lubricating bushed blocks for heavy and rapid work. The bushing is the life of the block and the extra cost of the metaline bushed sheaves is more than repaid by increased life to the block.

Can Furnish with Shackles. Prices on Application

In ordering specify size of Shell and state if becket is wanted.

Dimensions			Iron Bushed			Improved Roller Bushed			Phosphor Bronze or Metaline Brushed, Self-Lubricating

Above Blocks fitted with rings instead of shackles, when so preferred.

FOR EXTRA SHEAVES, SEE INDEX

## CARPENTER SPECIAL STEEL TACKLE BLOCKS

With Loose Side Hooks

For Manila Rope

For general use where Loads are light we recommend these Blocks.

They are lighter than Wood Blocks and equally strong. As there is no danger of shells splitting, they are more durable. They are jappaned and baked hard, giving them a beautiful finish. Forged Steel Hooks, Straps, Pins and Shells. Straps extend full length of shell, giving strength and rigidity to the blocks, and furnishing proper support for Becketts. Shells have rounded edges to protect rope.

## ANVIL BRAND IMPROVED METAL SNATCH BLOCKS

Fig. 611

For Manila Rope  
Has a Positive Locking De-  
vice, Drop Forged Hooks,  
Heads and Links

Fig. 612

This block has the safest and most easily operated locking device of any on the market.

Both sides of shell are same length—the inner surfaces being perfectly smooth and the outer edges being well rounded; there are no sharp or uneven points of contact to chafe the rope.

The sheave has a bearing at hub only and, as the edges cannot wear against side of block, the groove is kept perfect for the rope.

These blocks furnished with sheaves for Wire Rope, to order.

Self-Oiling Hay  
Fork Block

## "HARTZ" SELF OILING STEEL HAY FORK BLOCKS

Steel Shell, Open Hearth Steel Swivel Ring, Iron Sheave (4 1/4 in. diam., 1 1/2 in. wide), mortise 1 3/4 in., plenty of head room. Edges of Shells are upset and turned out to prevent wear of rope. The chamber in Sheave can be filled with axle grease, tallow or oil, and then corked up. The lubricant feeds on the solid pin or axle, no matter in what position the Block is worked. It is the best self oiling device in the market.

## NEW STYLE CARGO HOISTING BLOCK

Stiff Swivel Hook

Fig. 642

For Stevedore Use

Fig. 642A

New Style Cargo Hoisting Block, with wooden cheeks, malleable iron frame (galvanized), wrought iron hook and strap, and fitted with New Style Sheave.

This block is circular in form, enabling us to use a sheave nearly same size as the block, which makes a saving of from two to three inches in length over other styles. The edges of frame are rounded to protect the rope.

New Style Metal Sheave, with lignumvitae projecting cheeks, and galvanized polished scores.

The projecting cheeks prevent the edges of the score of sheave from coming in contact with sides of the block, thereby keeping score of sheave perfect for the rope.

Above blocks furnished with sheaves to carry wire rope when so required. These sheaves are fitted with self-lubricating side bearings.

In Ordering Specify Size of Block.

**"HARTZ" STEEL DERRICK AND HOISTING BLOCKS**

FOR WIRE ROPE

In Ordering Specify Size of Sheave and State if  
Becket is Wanted

With Self Lubricating Graphite Bronze Bushed Sheaves

These Blocks furnished with or without Steel Safety Link Hook. When the Block is used as a lower block in hoisting we send Guards (see list for extra cost), as they prevent the block from tipping over. All Blocks are drilled for the guards, so that they can be adjusted readily.

In ordering these Blocks, always specify Wire Rope Derrick Blocks, to avoid mistakes.  
Can furnish with Stiff Swivel Hook at an advance in price

## WROUGHT IRON SNATCH BLOCKS FOR WIRE ROPE

In Ordering Specify Size of Sheaves

Drop Link

Fig. 722

Diameter Sheave inches	For Diameter Rope inches	Iron Bushed each	Phosphor Bronze, or Metaline Bushed, Self-Lubricating, each
6	$\frac{3}{8}$	\$11.00	\$12.00
8	$\frac{1}{2}$	14.00	15.00
10	$\frac{5}{8}$	16.00	18.00
12	$\frac{3}{4}$	18.00	21.00
14	$\frac{7}{8}$	20.00	24.00
16	$\frac{1}{2}$	28.00	33.00
18	1	38.00	44.00
20	$1\frac{1}{4}$	50.00	58.00
20	$1\frac{1}{2}$	70.00	78.00

Style No. 722 has semi-circular guard pressed in shell over sheave to prevent wire slipping between shell and sheave.

Style No. 723 has center extension piece coming close to the Sheave, preventing the wire rope from leaving the Sheave. It also prevents the Shell from binding or pinching the Sheave.

Self-Locking Clasp

Fig. 723

## "PERFECT" WIRE ROPE SNATCH BLOCK

In Ordering Specify Size of Sheaves

Closed

Fig. 726

Size Sheave inches	For Diam. Rope inches	Phosphor Bronze or Metaline Bushed each
8x1 $\frac{1}{4}$ x $\frac{7}{8}$	$\frac{1}{2}$	\$17.00
10x1 $\frac{1}{4}$ x 1	$\frac{5}{8}$	18.00
12x1 $\frac{1}{2}$ x 1 $\frac{1}{4}$	$\frac{5}{8}$	21.00
14x1 $\frac{1}{2}$ x 1 $\frac{1}{4}$	$\frac{3}{4}$	24.00
16x1 $\frac{3}{4}$ x 1 $\frac{1}{2}$	$\frac{7}{8}$	33.00

The heavy flatted Hook, the Head and the Straps are all of the best forged steel.

The Shell has nicely rounded edges to prevent wear on the rope.

The Sheave has a bearing at hub only, and is so fitted in Shell it is impossible for wire to slip between Shell and Sheave.

## IMPROVED SKIDDER BLOCK

Three Sizes—11 inch, 14 inch and 18 inch diameter Sheaves

## DESCRIPTION

**EYE**—Best Drop Forged Steel. Eyes are usually made to swivel, but can be made rigid if desired. Note Heavy Shank.

**SHELL**—Especially designed for strength and lightness to enable the Block to turn easily to follow the lead of the rope. This Prevents the Rope Chafing. The Sides of the Shell are Countersunk to Cover the Edges of Sheaves, thus Preventing Wire from Slipping Between Rim and Shell, and causing it to always maintain its proper position in groove of Sheave.

**PIN**—Made from Best Cold Drawn Steel with Heavy Nut on each end, Securely Locked.

**BUSHING**—Phosphor Bronze Bearing Metal. The very best for heavy, rapid work. Perfect lubrication is secured by a large oil chamber in hub of Sheave which is filled with waste and a lubricant which works through openings in Phosphor Bronze Bushing to the Pin. Oil chamber is easily accessible through opening in side of Sheave.

**SHEAVES**—Are of two kinds. A Special Extra Hard Cast Steel made especially for us for these Blocks. The groove of the Sheave is the most subject to wear of any part of a block and our aim is to give a metal that will outwear any on the market, except the Manganese. Manganese Steel Sheaves are also furnished, if desired, in these Blocks. This steel is so tough it cannot be machined, but must be ground to size. Experience has proven that these Sheaves add from 25 % to 50 % to the life of the wire. We only ask a reasonable advance for these, and fitted with them, the block is practically indestructible. To distinguish the Manganese, Sheaves are painted red.

11 inch Steel Sheave	list each	\$50.00

## PEERLESS HOISTS

SPUR GEARED—HIGHEST EFFICIENCY—LIGHT WEIGHT

Showing Different Arrangements of Chains on Various Sizes of Peerless Hoists

## THE PEERLESS HOIST

IMPROVED 1913

Although the Peerless Hoist has given unequaled satisfaction in the past, several improvements have recently been added to further increase the strength and durability. The scientific design and high quality of manufacture give this hoist an efficiency of eighty per cent. All hoists undergo a proof test fifty per cent beyond the rated load.

The trunnions on the top hook now engage in two drop forged hangers, held in recesses in the side frames and the load sheave is cast steel and runs in removable bushings pressed in the lower ends of the steel hangers. The load chain is made of the best material obtainable and is heat treated to increase the ductility.

The cast iron cover over the gears is now replaced by a pressed steel dust cover, the outer end of the intermediate gear studs and pinion shaft being held by a supporting yoke.

The hand wheel is made with a pressed steel center for greater protection against accidental breakage and the hand chain guards have a steel flange to guide the chain smoothly at all times.

These improved parts can all be applied to the previous model but a new style frame and steel hanger must replace the old frame. Also a steel cover and supporting yoke replace the old cast iron cover.

In operating the Peerless Hoist a pull exerted on the hand chain to raise the load is transmitted, with almost no loss by friction, through a simple balanced train of spur gears to the load wheel. The sustaining mechanism is a special patented friction brake which revolves as one piece with the pinion shaft when lifting, without waste of energy and without noise; but when hoisting ceases, it is automatically and positively locked to hold the load until again moved by the operator. The parts of this friction brake require no adjustment and only the slightest pull is required to lower the load.

All gears are accurately cut from solid steel blanks and are bushed with bronze. The teeth on the central pinion are unusually strong, and are heat treated to prevent wear. A single strand of load chain on the six thousand pound block and the compact arrangement and close head room of larger sizes are appreciated by all users.

See following pages for sizes and prices

## COMBINED TRAVELERS

WITH PEERLESS HOISTS

Fig. 1101. I-Beam

Fig. 1102. Flat Rail

## COMBINED I-BEAM TRAVELERS

With either Plain or Geared Travelers the Hoists in combination save head room and hold the hoist in the same relative position to the traveler so that the operator does not get his chains confused. This arrangement is most desirable on the beams of traveling and jib cranes and on overhead tracks where it is not necessary to detach the hoist for use in other places.

\*From under side of I-Beam to inside of hook.

## COMBINED FLAT RAIL TRAVELERS

With travelers on flat bar overhead track, where belts and pipe lines do not permit the use of short hangers it is very desirable to have a hoist with short head room. The permanent combination of hoists and flat rail travelers brings the hoist as near as possible to the rail.

Because of the ease of erecting and bending for curves, the flat bar track, with combined hoists and travelers, is the most satisfactory system for shops and warehouses.

## PEERLESS TROLLEY HOISTS

Army Type

Navy Type

For use in cramped locations, to overcome the comparatively greater head room of regular hoists and travelers, the Peerless Trolley Hoist was built, in which the regular internal mechanism of the hoist and the trolley wheels are carried by the same side frames. This construction is so compact that the distance between the hook and beam is even less than between the hooks on the regular hoist. The gears are protected from dirt by a tight cover, but its removal does not interfere with the operation of the hoist. Trolley wheels are fitted with roller bearings and are made regularly of a large diameter requiring that the I-beam be supported by countersunk bolts. Small wheels can be furnished to pass regular bolt heads but at a small sacrifice of head room.

These trolley hoists are built in two styles, the Army and Navy types, the latter having a drag handle and clamp for binding it to the beam. They are used largely by the War Department for handling ammunition, both on shore and shipboard, and also by others where close head room is important.

260	Trolley Wheel, small Diameter, each...†	2.00	2.00	2.50	3.50	4.50
282	Gear Spider .....	* .50	.50	.60	.80	1.50
283	Gear Spider Stud, each.....	* .10	.10	.10	.10	.15
285	Gear Cover .....	* .70	.80	.90	1.30	2.40

\*New style cover and spider interchange with old style back cover.

†Large diameter wheels (piece 243) are used where track is riveted to support; small diameter (piece 260) when clearance for bolt heads is required.

## HARRINGTON SCREW CHAIN HOISTS

Hand operated Chain Hoists, because of the ease of operation and general utility, are extensively used in all the large industrial plants throughout the country. Even in places where power is easily available, they are preferred to power hoists.

No matter what the class of hoisting may be, the most reliable and cheapest method is to use Chain Hoists. Harrington Hoists are made by skilled workmen from the highest grade material and are designed for long life and to give the best service to all users.

As all parts are made complete by jigs and gauges and inspected before going to the assembling room, repairs are sure to interchange with old parts. The load chains are all made by hand labor from specially selected iron, undergo several rigid inspections, and each link is carefully tested.

The hoists are made in three styles:

The Peerless—For fast speed and high efficiency. Shown on preceding pages.

The Screw—For simplicity and rough usage.

The Differential—For occasional use not demanding high efficiency.

## HARRINGTON IMPROVED SCREW HOISTS

1894 Patent

While not so fast as the Peerless, it is a powerful and compact block. It is built to withstand the wear and tear of hard usage. The worm gear is made of bronze with square hubs; it is driven by a steel worm. The load wheels have square holes fitted to a square hub on the worm gear, and are reversible so that when one side is worn the wheels can be taken off and reversed. Load is carried on two distinct chains. A thrust screw and bronze washer are placed at the end of the worm, to obtain fast or slow speed in lowering.

500 to 12,000

Capacity in lbs.	Regular Lift in feet	Price of Hoist, Regular Lift	Price of Extra Lift, per foot	Minimum Distance between Hooks in ft.	Weight of Hoist, in lbs.	Full on Hand Chain to Lift Full Load	Feet of Chain Handled to Lift Load 1 ft.	Number of Strands of Load Chain

## YALE TRIPLEX BLOCKS

SPUR GEARED. HIGHEST EFFICIENCY

The Yale Triplex Block is rated on a capacity basis of the long ton and each rated ton is tested at the factory with a fifty per cent overload or 3,360 lbs. This assures great safety and reserve capacity.

## YALE TRIPLEX BLOCKS

From Hook to Hook a Line of Steel

## LIST OF BLOCKS

\*Figures denote height in feet which blocks with regular lengths of chain will hoist above level on which operator stands.

†For each hand chain.

## YALE TRIPLEX BLOCK PARTS

MODEL SS

Used on Large Blocks only at Top 3 Tons and Larger

Used Only on Large Blocks at Bottom 3 Tons and Larger

## HOW TO ORDER YALE TRIPLEX PARTS

Always state whether for "1898 Model" or "Model SS." This is marked on the Gear Cover. Parts 104 to 223 are the same in both models—parts 303 to 332 differ in 1898 Model and Model SS.

Always give capacity of block.

When in doubt about the model or capacity of part send us the old part to be duplicated. Put your name on it so we can identify same on arrival. When the hand wheel or gear case is marked "Quick Speed" always specify "Quick Speed," and mention SS or 1898 Model.

LIST OF PARTS AND PRICES ON NEXT PAGE

## PRICES FOR PARTS OF YALE TRIPLEX BLOCKS—MODEL SS

These parts are all illustrated on the preceding page

In ordering parts state whether for "1898 Model" or "Model SS." Parts 113 to 223 are the same in both models. Parts 303 to 332 differ in "1898 Model" and "Model SS."

341	Top Hook			145	Top Sheaves		151	Bottom Guards and Guides	
342	Top Yoke			147	Bottom Sheave		152	Bottom Side Plates and Crosshead	
143	Top Guard and Guides			148	Bottom Sheave Pin		153	Bottom Hook	
144	Top Sheave Pin			149	Becket Straps				

\*In ordering Load Chains specify whether or not hook is required.

†Parts should be specified "Quick Speed" for blocks so marked on the gear cover.

Always give size of block. Parts 329 and 221 are a driven fit. In assembling see that the locating holes in No. 127 line up at the center.

If parts are for Trolley Blocks, specify model, capacity and size of I-beam.

## YALE DUPLEX BLOCKS

### SCREW GEARED

The Yale Duplex is the popular type of the Yale Blocks and ranks next in efficiency to their Triplex. It is both light and powerful. The hand chain guides are so placed that the operator can stand clear of the load without wasting energy in dragging the chain through the guides. The safety load chain guides prevent slipping, and the swivel connections prevent fouling of the chain. The bronze worm wheels and steel worms have hardened and ground thrust bearings and run in oil.

Capacity in Tons	Price Complete	*Regular Hoist in feet	Extra Hoist Price per foot	Minimum Distance between Hooks in inches	†Reach in feet and inches		Net Wgt. in lbs.	‡Chain Pull		Length of Chain in Regular Hoist	
					ft.	in.		lbs.	feet	Load feet	Hand feet
½	\$25.00	8	\$1.00	13	9	1	43	68	40	18	16
1	30.00	8	1.10	16	9	4	57	87	59	18	16
1½	40.00	8	1.20	19	9	7	76	94	80	18	16
2	50.00	9	1.30	21	10	9	104	115	93	20	18
3	75.00	10	1.50	25	12	1	180	132	126	24	21
4	95.00	10	1.60	29	12	5	215	142	155	24	21
5	140.00	12	2.40	31	14	7	330	145	195	30	26
6	180.00	12	2.50	33	14	9	320	145	252	55	26
8	210.00	12	2.70	36	15	0	380	160	310	55	26
10	275.00	12	3.25	45	15	9	555	160	390	57	26

\*Figures denote height in feet which blocks, with regular lengths of chain, will hoist from level on which operator stands. Extra lengths of chain should be ordered when it is desired to hoist higher. No deduction is made for blocks with less than the regular length of chain.

†The "Reach" is the sum of the "Hoist" and the "Minimum Distance between Hooks." When hung at this height to lift the full hoist above the floor the hand chain of Triplex or Duplex blocks hangs down to within 18 inches of the floor.

‡Figures denote the pull in pounds required to lift the full load, and the number of feet of hand chain which must be handled to lift the load one foot.

It is absolutely impossible for the load chains to slip, because these safety guides prevent it.

## PARTS FOR YALE DUPLEX BLOCKS

When Ordering give Name and Number of Parts and also the Size of the Block and its Shop Number, Stamped Near the Top Hook

These parts are illustrated at top of next page.

## PNEUMATIC HOISTS

Fig. F. B. 107  
Class A and G

The design of these various types of Air Hoists has been made to secure strength, durability, lightness, safety, dependability, low maintenance cost, accessibility of all working parts and the best possible speed control.

**Weight** is minimum, less load to hang, less effort to move.

**Strength** is maximum, no unsafe loads suspended above your workmen.

**Length.**—Minimum, horizontal hoists especially adapted to limited headroom.

**Styles.**—Various styles of pendant, bracketed and rope compounded hoists.

**Pressures.**—Hoists are suitable for pressures as high as 110 pounds.

**Capacities.**—Up to 20,000 pounds at 80 pounds air pressure. Always make allowance for at least 10 per cent possible drop in your air pressure.

**Valve.**—The Curtis patented hoist valve is of the disc type, self-grinding, perfectly tight, wears slowly and remains tight after years of constant use.

**Cylinders.**—Made of steel tubing, ground and polished on the inside, giving maximum strength with the least possible weight.

**Upper Heads.**—Cast steel—screwed to cylinders—for pendant hoists.

**Rear Heads.**—Steel, bolted to screw rings—for bracketed hoists.

**Stuffing-box Heads.**—Cast steel, with gland and die cast piston rod bushing on small sizes—brass bushing on large sizes. Heads bolted to screw rings.

**Rings.**—Cast steel, screwed to cylinder, plain, bracket or plate type.

**Piston Leathers.**—Special processed hydraulic leather—air tight.

**Removable Pistons.**—Leathers renewed by unbolting rear head on bracketed hoists or lower head on pendant hoists without dismantling hoists.

## CURTIS PENDANT AIR HOISTS—Class A and G (Patented)

SEND US YOUR SPECIFICATIONS WHEN IN THE MARKET FOR HOISTS OF ANY TYPE.

## FLAT RAIL TRAVELERS

Fig. 122A Plain

Fig. 122B Geared

The steel plate travelers for flat rail are often more desirable because of the ease of erecting and making curves in the track.

The side plate is made sufficiently heavy to resist bending, and good clearance is allowed for the foot of the hanger. The size of the wheels is as large as ordinary head room will allow, and they all have steel bushings and roller bearings.

In the geared Traveler, both wheels act as drivers, to give the greatest tractive force. They are all made to take apart, for ease in putting on the rail. Clearance dimensions given on request.

## PRICE LIST OF FLAT RAIL TRAVELERS

Capacity in pounds	Standard Size of Rail in inches	Greatest Distance Between Hangers in feet	Price of Traveler		Height of Rail from Floor for Regular Hand Chain*	Price of Extra Hand Chain per foot Height	Weight in pounds	
			Plain	Geared			Plain	Geared

FOR DERRICKS, WINCHES AND HAND POWERS, SEE INDEX

## I-BEAM TRAVELERS

To Run on the Lower Flange.

Fig. 121A. Plain

Fig. 121B. Geared

The steel side plates give a maximum strength and at the same time allow light weight, saving of space, and flexibility.

The diameter of the wheels is made as large as the size of the beams used in general practice will allow. They are equipped with steel bushings and roller bearings, and the Geared Travelers are driven on both sides of the beam to prevent friction against the flanges.

Both Plain and Geared Travelers can be widened to suit beams larger than standard, but will be sent regular unless otherwise ordered. Clearance dimensions given on request.

## PRICE LIST OF I-BEAM TRAVELERS

# "BROWNHOIST" PLAIN AND GEARED TROLLEYS

Fig. 1181 Plain

Fig. 1181A Geared

The value of the chain block is greatly increased by the use of trolleys and I-beams. This permits loads to be transported as well as raised.

Standard trolleys are shipped with pins and washers, so that they may be applied to three sizes of I-beams.

The Brownhoist Geared Trolley has all the advantages of the Plain Trolley, and the gear drive allows heavy loads to be moved with great ease and accuracy.

\*Pull on hand chain to move fully loaded Trolley along Track.

Fig. 1183

## "BROWNHOIST" CAST IRON TROLLEYS

These Trolleys are furnished to meet the demand for an efficient low priced trolley.

These Cast Trolleys are light, easy running and durable and will satisfactorily meet the needs of a low cost installation.

Capacity in Tons	Standard I-Beam* in. lbs.	Price			
		Plain Bearing		Roller Bearing	
		Cast Iron	Cast Steel	Cast Iron	Cast Steel
1/2 *	5 9 3/4	\$8.00	\$11.10	.....	.....
1	6 12 3/4	10.50	14.00	\$17.50	\$21.00

## MANILA ROPE HOISTS

HALL IMPROVED  
SPECIAL SAFETY  
HOISTS

Equipped With Improved  
Self Adjusting Safety  
Locks

The Height of Perfection in  
Safety Hoists

This new lock is the simplest safest, most efficient lock ever devised. It adjusts automatically to various sizes of rope used—no wrenches or screw-driver required to adjust the lock. Holds the load in a grip that can't slip. **ROPE NOT INCLUDED.** A complete line of rope is listed in index.

Fig. 9

Fig. 8

Fig. 7

No.	Capacity Pounds	Size of Rope inches	No. of Sheaves	Average Man Can Hoist	List Price Without Rope, each
3	2,000	$\frac{1}{4}$ to $\frac{1}{2}$	3	600 lbs.	\$3.45

7	2,500	$\frac{1}{2}$ to $\frac{7}{8}$	1	200 lbs.	3.75

## SURE GRIP STEEL TACKLE BLOCK

Will hold load at any point without fastening the rope.

The Brake Is Absolutely Automatic

The Heavier the Load the Better the Grip

At the same time the brake is susceptible of being disengaged by very slight pressure. The body of block is made of steel plates. The pins are cold rolled steel. The essential castings are malleable iron, making the strongest and safest possible combination of materials, thus affording immunity from accidents in the highest degree. The brake is a fluted wedge dropping between two ropes in such a manner that the load is brought on all the strands of the rope at the same time. The brake does not flatten the rope, consequently the wear upon it is reduced to a minimum.

No.	For Rope	Capacity lbs.	One Man Can Lift lbs.	Tested to lbs.	Price per Set Blocks Only
3	$\frac{3}{8}$ in.	600	300	2,800	\$ 3.00

6 $\frac{1}{2}$	$\frac{3}{4}$ in.	5,000	850	9,000	14.00

FOR MANILA AND WIRE ROPE SEE INDEX

## CHAIN HOISTS

The average workman in using a Chain Block frequently overloads it to several times its capacity. Although all makes are tested to a liberal factor of safety, such overloading will stretch the chain until its links no longer fit properly in the sheave, thereby causing the links to ride or wedge, making hoisting a burden.

Our experience of over forty years in all types of Chain Hoists has proven this to be the verdict after examination of so-called defective blocks. While all makes of these blocks will lift more than the guarantee on them, no manufacturer can be expected to replace an overloaded block.

## WESTON'S DIFFERENTIAL PULLEY BLOCKS

## CARPENTER'S DIRECT

They hold the load at any point and cannot run down. One man can lift 1000 lbs.

## LIST COMPLETE

Capacity tons	Hoist feet	Shortest Distance between Hooks inches	Length of Chain feet	Net Weight lbs.	Each
$\frac{1}{4}$	6	17	22	20	\$18.00
$\frac{1}{2}$	7	21	26	31	21.00

108	8	8 x16	190.00	200.00	220.00
109	8	8 x22	210.00	220.00	240.00
110	10	8 x16	190.00	225.00	245.00
111	10	8 x22	220.00	240.00	260.00

Prices of steel frames furnished on application.

The Chicago Wagon or Stock Scale above is fully guaranteed to give entire satisfaction and will comply with all laws governing weights and measures.

Fig. 0571

## BASEMENT OR ASH HOIST

**A Labor Saving Device for Removing Ashes, Barrels, Boxes, Etc.**

The illustration shows clearly the advantages embodied in a machine of this type.

Is a simple construction consisting of two steel channels connected by a couple of cast iron spreaders which also serve the purpose of guides for the raising and lowering of the telescopic mast.

The frame is secured to the floor and wall by anchor bolts.

This device is simple, easy to operate and takes up very little room in the basement. When not in use the entire machine is below the basement ceiling.

To operate the hoist the mast is raised by the lower crank shown in the illustration and held in the elevated position by a steel pin.

The hoisting mechanism is operated from the sidewalk level—the hoisting head revolves so that the material may be swung to the sidewalk without lifting.

The capacity of the mechanism is sufficient for any load which it would be advisable to handle with a machine of this type.

**When ordering state the height of the basement ceiling.**

List price ..... \$105.00

**FOR BUCKETS, SHOVELS AND WHEELBARROWS, SEE INDEX**

## PLATFORM SCALES

Fig. 615A. "Gibraltar"

For Measures, Pails,  
Scoops, Baskets and  
Trucks, see Index.

Fig. 615B. "Chicago Portable"—With Wheels

## Fig. 615A—GIBRALTER PORTABLE PLATFORM SCALES

Compound Beam. No loose weights. Full capacity is on the beams. Mounted on wheels. Beam on top and easy to get at.

Guaranteed to pass inspection and to comply with all laws governing weights and measures.

No. 930. Capacity 600 lbs., platform 16x25.....\$28.00

No. 961. Capacity 1000 lbs., platform 17x26.....35.00

## Fig. 615B—CHICAGO PORTABLE PLATFORM SCALES

## WITH SOLID BRASS BEAM, SLIDING POISE AND SET SCREW

Suitable for the weighing of general merchandise in all kinds of trade.

Scales of 1000 pounds capacity and larger have pillar braced with iron.

These scales are all manufactured of the best materials throughout, with carefully tempered steel bearings and pivots, where both strength and extreme hardness are required.

Panel board for platform is hard wood.

## HAND AND PUSH CARS

Fig. 6

Fig. 10

## PUSH CARS

No. 6. Standard gauge. Platform 7 feet long by 5 feet 7 inches wide. Steel wheels 20 inches in diameter, machine steel axles  $1\frac{1}{2}$  inches in diameter. Weight, 500 lbs.

Each ..... \$40.00

## Extra Heavy

No. 6 $\frac{1}{2}$ . Same dimensions as No. 6. Axles 2 inches. Weight, 700 lbs.

Each ..... \$48.00

## Fig. 10. EXTRA HEAVY TRACK LAYING CAR

## 15-TON CAPACITY RAIL CAR

No. 10 car illustrated, is built in an exceedingly substantial manner. Standard gauge. Capacity, 30,000 pounds; weight, 2,000 pounds. In size the car is 8 feet long by 6 feet 6 inches wide; has 4 by 8 inch sills, the cross sills being plated heavily with iron. Large tool box as shown, and four extra size rollers on end sills. The wheels are of chilled cast iron, 16 inches in diameter, with wide tread—extra heavy and strong.

Each ..... \$120.00

No. 11. Ten-Ton Track-Laying Car. Well built throughout but is of lighter construction than style No. 10, its weight being about 1,350 pounds; capacity 10 tons. Standard gauge. It is 7 feet 8 inches long by 6 feet 3 inches wide; has chilled cast-iron wheels, 16 inches in diameter,  $5\frac{1}{2}$  inch tread. The cross sills are strapped with iron and each end sill provided with two rollers. Car is also supplied with box for tools.

Each ..... \$100.00

Fig. 139

Fig. 5

## HAND CARS

No. 1. Standard gauge. Platform 6 feet long by 4 feet 5 inches wide. Steel wheels 20 inches in diameter, axles  $1\frac{1}{2}$  inches in diameter. Weight, 525 lbs.

Each ..... \$52.00

No. 139. Standard gauge. Platform 8 feet long by 5 feet 8 inches wide. Steel wheels 20 inches in diameter, axles  $1\frac{1}{2}$  inches in diameter. Weight, 700 lbs.

Each ..... \$74.00

## Fig. 5. INSPECTION CAR

No. 5 has platform 6 feet long by 4 feet 5 inches wide, steel wheels 20 inches in diameter. Weight, 475 lbs.

Shown in illustration with single end lever; but we furnish it with double end lever if desired. Has hand lever brake in front of seat, to be operated by passengers.

Each ..... \$80.00

FOR OTHER STYLES OF CARS, SEE INDEX

## HUNTINGTON STANDARD TRACK GAUGE

Fig. 543A

## WITH AND WITHOUT INSULATION

This is the ordinary pattern Huntington Gauge. The construction is less expensive than the best grade; the heads simply being riveted on and the ends are not milled. Made in insulated and non-insulated styles. Unless specified we ship without insulation.

Price, without insulation, per doz. .... \$10.00  
 Price, with weather-proof insulation, per doz. .... 15.00

## INSULATED CIRCULAR TRACK GAUGE

Fig. 543B

This gauge has radial ends and is furnished with and without guard rail attachment.

Price, with guard rail attachment, per doz. .... \$20.00  
 Price, without guard rail attachment, per doz. .... 18.00

## WOODEN TRACK LEVEL

Fig. 543C

Made of white pine with three coats of paint, thus overcoming the tendency to warp and twist shown in common maple levels. It is thoroughly bound in steel. Shows proper distance to set guard rails.

Price, without insulation ..... per doz. \$15.00  
 Price, insulated ..... " 15.00

## McMANUS GAUGE AND LEVEL

Fig. 543D

The gauge glass has rubber packing, which protects it and greatly lessens the likelihood of levels being broken by rough and careless handling.

Price ..... per doz., \$30.00

## JIM CROW RAIL BENDER

Fig. 543E

Made from best grade of forging steel, with machine cut, square thread, steel screw, either with or without lever. Most compact and simplest device for bending and straightening light rails and car irons.

Size No.	Capacity Size of Rails lbs.	Span of Claws, inches	Diameter of Screw, inches	Hole for Lever, inches	Weight, lbs.	Each

5	100	28	2 3/4	1 3/8	170	25.20

FOR RAILROAD SPIKES, TRACK BOLTS, ETC., SEE INDEX

## TRACK DRILLS, SAND DRIERS AND SALAMANDERS

The illustration shows the "Hyduty" Paulus Track Drill equipped with overclutch hook which is the usual standard for railroad track drilling.

In the "Hyduty" Drill the size of the thrust bearings has been increased and they are fitted with a ball thrust bearing made especially for these drills. The thrust plates are made of high grade steel, thoroughly case hardened, polished and ground. This ball thrust bearing is rated to carry approximately 2200 pounds at normal speeds at which the drill will be operated. The type of construction is of the very best.

The ball retainer is made of pressed steel and separates the balls so that they do not grind against one another.

Imported balls of the highest quality obtainable are used and they are the same quality of balls as those used in the best grade of automobile bearings.

These drills are equipped with chuck for twist or flat drills.

The "Hyduty" Paulus Track Drill is made in four styles:

Style A: The standard over clutch, the most used of all the "Hyduty" drills.

Style B: Equipped with a special hook, to permit drilling close to end of rail. Another feature is a hook which can be lengthened so fish plates can be drilled same time as rail.

Style C: The underclutch, still being used by some roads, but being rapidly displaced by Style A.

Style D: For drilling girder rails and I beams. Hook is of a size to permit drilling to center of 15 inch beam. Has an adjustable screw which supports hook in desired position.

With twist bit spindle and twist bit Style D .....	44.50

## G. B. C. SAND DRIER

The wet sand is shoveled into the skirting and as it dries, will of itself run through the holes in the ring at the bottom of the skirting. The amount of sand the stove will dry depends on how wet the sand is and on the condition of the fire in the stove. The stove may be fed with hard or soft coal, coke or wood. Clear sand only can be used. Earth or clay would bake hard, and fail to run through holes in the ring.

The grating adds greatly to the life of the stove by preventing baking of the sand and consequent burning of the castings. It is well worth the additional cost in this respect alone. The whole construction is for service and durability, and we feel confident that there is no stove for the purpose made superior in any respect to the one we herewith present.

Fig. 548C  
Sand Drier with Grating

No.	Tons Capacity Daily	Weight lbs.	Each Without Grating	Grating Each
1	10	1200	\$75.00	\$20.00
2	5	700	60.00	12.00
3	1½	400	40.00	10.00

## SALAMANDERS

For drying out new buildings, etc. Body 15x15 inches, total height 30 inches. Heavy steel band legs rounded under pan, to prevent marring floors. Strongly riveted and braced. Heavy cast grate.

No. 18 gauge steel, complete without covers .....	\$2.00
No. 16 gauge steel, complete without covers .....	2.50
Extra grates .....	.40
Covers .....	.50
Hood with pipe outlet .....	1.00

Fig. 549F

## ELECTRIC HAMMERS

The Electric Hammer illustrated above is the most successful hammer of its kind. It has been on the market for six years, and in that time has demonstrated conclusively its advantages over hand work.

Owing to its wide range of service, it is extremely popular with all classes of mechanics. The rapidity with which work can be done with these hammers, and the economy of operation combined with the very reasonable price of the machine, appeals to the trade, and thousands of them are in use throughout the world, and are giving the highest satisfaction.

## WHERE ELECTRIC HAMMERS ARE USED

All the sizes are used by general contractors, electrical, plumbing, heating, ventilating and in fact all the sub-contractors on fireproof structures; by installers of machinery, elevators, carrier systems, telephones, pneumatic tubes, mail chutes, fire doors, stair treads, railings, ornamental iron work, opera chairs, carpets, etc.; by chief engineers in maintenance work in fireproof buildings; in fact by everyone who has occasion to drill or cut concrete, brick or stone for the installation of expansion bolts, pipes, removal of foundations, openings or the like, channeling plaster, surfacing or bush hammering concrete or stone, removing mortar from terra cotta, brick or stone walls before repointing, etc. They are exceptionally useful to awning hangers.

The U-2 and D-3 sizes are also used in paint mills and the like for redressing stones; for scaling paint from ship bulkheads, scale from condenser tubes and rust and barnacles from buoys, etc.

The U-6 and D-4 are the tools most generally recommended to the contractor. Their weight is such as to make them easily handled and their capacity which enables them to drill up to one inch in diameter in concrete covers most of the requirements of contracting work.

The D-7 and D-9 are used in mines, where electricity is available, for the installation of hangers, for drilling to break down the overhead rock in increasing the size of the entries, etc.

These tools are simple in construction and all the working parts are readily accessible. The handle which has been designed for comfort provides an easy and firm grip for the operator and also contains a rugged quick make and break switch which controls the tool.

Materials and workmanship are of the best and all parts are made to gauges and are interchangeable. Each tool is complete with flexible cord and plug and may be connected directly to any lamp socket.

## Direct Current Only

Type No.	Voltage	Power Consumption Watts	Blows per minute	Capacity in Concrete inches	Weight lbs.	Price
D-3	110 or 220	150	4000	$\frac{1}{2}$	14	\$100.00
D-4	110 or 220	220	1800	1	25	125.00
D-7	110 or 220	550	1300	$1\frac{1}{2}$	50	160.00

## UNIVERSAL

Operate on D. C. or Alternating Current 25, 30 or 60 Cycles

U-2	110 or 220	150	4000	$\frac{1}{2}$	15	\$125.00
U-6	110 or 220	240	1800	1	27	150.00

The capacities given are conservative and approximate. The tools cannot be forced, the strength of the blow is constant and the capacity depends upon economical drilling speeds only. There is no danger of burning out the machines.

Each tool is complete with 10 feet of cord and plug and runs from a lighting socket.

FOR STAR DRILLS, BRICK CHISELS AND BULL POINTS, SEE INDEX

## "JACKHAMER" ROCK DRILLS

The "Jackhammer"  
Fig. B. C. R. W. 430

canals, railroads and public highways, grading streets, stripping of old pavements and various other municipal improvements comprise important fields in which "Jackhamers" have brought about marked economies.

In quarrying operation, "Jackhamers" are suitable for bench work, block-holing, plug and feather work, etc.

Slide of Cone on Shell, inches	19 1/4
Maximum travel of Machine, inches	43 1/2
List, each	\$60.00

The "Jackhammer" in the Mounting

The "Jackhammer" (Type BCR-430) may be used as a hand drill or a mounted drill as the nature of the work may require. It is quickly slipped in or out of a simple feed shell mounting (Type JM-6) for either class of service.

Under certain conditions, especially where dust is experienced, the Jackhammer can be supplied with a water feeding device. When so equipped this type is designated Type BCRW-430.

Owing to the fact that it operates successfully by steam or air, steam shovel users find the "Jackhammer" particularly valuable for breaking up large boulders in front of the shovel.

In metal, coal, gypsum, salt and other mining operations the "Jackhammer" has established many records for economical operation. Some of the principal uses are underhand stoping, tunnel trimming, cutting channels in roof for trolley cross-overs, drilling trolley hanger holes, bench work, block-holing, cutting cavities in the rock for pumps, fans, telephones and other apparatus, cutting hitches for timbers, cutting drainage ditches, sinking shafts and winzes, and driving tunnels and gangways.

In farming and reclamation service the "Jackhammer" finds many applications for clearing land, digging irrigation trenches, digging pits, etc.

Coal miners find the "Jackhammer," using spiral steel, far superior to the old style hand auger for boring coal.

"Jackhamers" are admirably adapted for caisson work. Likewise many uses are found for them in drilling rock for building and bridge foundations. The construction of aqueducts, dams,

canals, railroads and public highways, grading streets, stripping of old pavements and various other municipal improvements comprise important fields in which "Jackhamers" have brought about marked economies.

In quarrying operation, "Jackhamers" are suitable for bench work, block-holing, plug and feather work, etc.

## IMPERIAL VERTICAL AIR COMPRESSORS

## Type XII, Power Driven

Air Pressure, 60 to 150 Pounds

Single stage air, single acting, water jacketed, dust proof enclosed construction, automatic constant level splash lubrication, ring inlet valve on  $4\frac{1}{2} \times 5$  size, no inlet valve on smaller sizes, plate discharge valve on all sizes. Can be furnished with air cooled cylinder in smallest size. Water reservoir cooled on all sizes at extra cost.

This machine can be furnished complete with motor and short belt drive attachment as a complete electrical unit.

## TRIPOD ROCK DRILLS

For rock drilling in open cut work requiring holes of considerable depth and large diameter the Butterfly and Sergeant Tripod Drills will be found to give highly satisfactory service.

These drills are very simple in design and durably constructed. Contractors and others who have employed these drills have found them very economical to operate and speak well of their performance.

While shown here for tripod work they may be used on bar or column if desired.

# CARPENTERS' OXY-ACETYLENE WELDING AND CUTTING OUTFITS

Fig. 71

## CARPENTER No. 2 WELDING OUTFIT

Safe—Practical—Economical

This apparatus is designed for use in large Welding Shops, for general repairs in Mills, Factories, Large Foundries, Boiler Shops, Railroad Shops, etc. Its welding capacity is exceptional. The Welding Torch will weld up to 1½ inch thickness of steel, and 4 inch thickness of cast iron.

### LIST OF EQUIPMENT

- 1 No. 2 Torch, nickeled throughout, with 10 copper tips. Torch is 22 inches long and weighs 30 oz.
- 1 No. 2 Long Arm Oxygen Regulating Pressure Valve, nickeled throughout and fitted with a 3,000 lb. safety back, tool steel spring gauge to show the tank pressure, and a 150-lb. line gauge to show the working pressure. Also a needle valve and hose connection outlet from ¼ inch to ¾ inch hose as specified.
- 1 No. 2 Long Arm Acetylene Regulating Pressure Valve, gun metal finish, fitted with a 300-lb. tank pressure gauge and 50-lb. line pressure gauge. Needle valve outlet with ¾ inch to ¾ inch hose connections are supplied as specified. (Note:—This valve contains a Silver Bronze Diaphragm as required by the U. S. Bureau of Safety Transportation of Explosives.)
- 10 feet White High-Pressure Hose for Oxygen.
- 10 feet Black High-Pressure Hose for Acetylene.
- 1 large nickeled Wrench.
- 1 small nickeled Wrench.
- 1 pair Welders' Goggles, large oval lenses of amber olive glass and metal gauze spark protector.
- 1 Carbon Removing Torch.
- 2 Instruction Books.
- 1 Steel Shipping Case.
- 10 lbs. assorted Cast Iron Welding Rod (⅝ to ¾ inch diameter).
- 10 lbs. ¼ inch to ¼ inch Low Carbon Steel Welding Rod.
- 5 lbs. ⅝ inch to ¾ inch Norway Iron Welding Rod.
- 3 lbs. Cast Bronze Welding Rod (for brass or bronze).
- 2 lbs. ⅝ inch and ¾ inch Cast Aluminum Welding Rods.
- 1 lb. Cast Manganese Bronze Rods (for malleable iron brazing, etc.).
- 1 lb. ⅝ inch and ¾ inch Cast Copper Welding Rods.
- 2 lbs. Cast Iron Flux.
- 1 lb. Brass, Bronze and Copper Flux.
- 3 bottles (12 oz.) Aluminum Flux.

Fig. 72

- No. 2. Torch, with cutting attachment.....\$110.00  
 No. 2. Torch, without cutting attachment... 95.00  
 Extra Torch with 10 tips..... 28.00

## CARPENTER No. 1 OUTFIT

Designed for general repairs in Machine and Blacksmith Shops, Mills, Foundries, Factories, etc.—in fact any job where the average steel weld will not be over ½ inch thick, and cast iron 1½ inch thick. An excellent all around apparatus where careful and accurate work is required on machines, engine parts, dies, tools, castings, forging, frames, crank cases, transmission cases and gears.

### LIST OF EQUIPMENT

- 1 No. 1 Torch, nickeled throughout, with 6 copper tips. Torch is 19 inches long, weighs 30 oz., and will be supplied in 90, 30 or 15 degree heads as ordered.
- 1 No. 1 Oxygen Regulating Pressure Valve, nickeled throughout, with one 50-lb. nickeled line pressure gauge or one 150-lb. gauge if ordered with cutting attachment (see below).
- 1 No. 1 Acetylene Regulating Pressure Valve, gun metal finish, with one 50-lb. black line gauge.
- 10 feet White 150-lb. High-Pressure Hose.
- 10 feet Black 150-lb. High-Pressure Hose.
- 1 9 inch nickeled Monkey Wrench.
- 1 7 inch nickeled Monkey Wrench.
- 1 set olive green oval Welders' Goggles with gauze face protector.
- 1 Carbon Removing Torch.
- 2 Instruction Books.
- 1 Steel Shipping Case.
- 5 lbs. Hysilicon C. I. Welding Rod.
- 5 lbs. Low Carbon Steel Welding Rod.
- 2 lbs. Norway Iron Welding Rod.
- 1 lb. Cast Bronze Rod (for brass or bronze welding).
- 1 lb. Cast Aluminum Welding Rod.
- 1 stick Aluminum Solder.
- 2 lbs. Cast Iron Flux.
- 1 lb. Brass and Copper Flux.
- 1 bottle Aluminum Flux.

 No. 0. Extra Torch with 5 tips..... 16.50

## CARPENTER'S CUTTING TOOLS, REGULATING VALVES, SOLDERING AND BRAZING TOOLS AND WELDING SUPPLIES

Fig. 83

### CARPENTER'S SOLDERING AND BRAZING TOOLS

For all kinds of heavy soldering and brazing.

Outfit "A" complete with acetylene torch with head No. 1 (radiator soldering), head No. 2 (radiator soldering), head No. 3 (soldering of seams), head No. 4 (all kinds of brazing), head No. 5 (extra heavy soldering) and head No. 6 (light general soldering), 6 feet hose, 2 hose clamps. Complete, packed in a box .....\$11.90

Outfit "B" complete with City or Natural Gas Torch and all heads listed with Outfit "A," packed in a box .....\$12.90

Outfit "C" (Combination Outfit) complete with both torches and all the heads, packed in a box .....\$15.80

Acetylene Soldering and Brazing Torch alone (without heads) .....\$3.00

City Gas Soldering and Brazing Torch alone (without heads) .....\$5.00  
 Head No. 1 For radiator soldering ..... 1.00  
 Head No. 2 For radiator soldering ..... 1.00  
 Head No. 3 For seam soldering ..... 2.00  
 Head No. 4 For all kinds of brazing ..... .80  
 Head No. 5 For extra heavy soldering ..... 1.50  
 Head No. 6 For light general soldering ..... 1.10

### CARPENTER'S COMBINATION OUTFIT

This outfit is used for welding, lead burning, soldering and brazing.

The Torch is supplied, unless otherwise specified, with the following 3 tips:

**Tip No. 1**—Used in connection with oxygen and acetylene gases for welding.

**Tip No. 2**—Used in connection with oxygen and hydrogen or city gas for lead fusing.

**Tip No. 3**—Used in connection with city gas and compressed air for soldering and brazing.

If it be desired to use this torch for what we term "country use," i. e., where city gas and compressed air are not easily obtainable, we will supply the torch with three special tips, all for use with oxygen and acetylene gases.

In addition to the torch and three tips, the outfit includes two 8 foot lengths of hose with hose clamps.

Without Wall Attachment .....\$16.00  
 Wall Attachment if desired ..... 4.00  
 Oxygen Regulator with 50 lb. Gauge if desired ..... 11.50

Fig. 81

### CARPENTER'S CUTTING TORCH

This torch will cut steel or iron from 1/4 inch to 6 inches thick in any direction. It is valuable where the job to be cut is over 3 inches long.  
 Cutting Torch, with 3 tips and wheel guide .....\$40.00

Fig. 82

### CARPENTER'S CUTTING ATTACHMENT

Outfits for Nos. 0, 1 or 2 can be supplied with a cutting attachment, which will cut straight or circular cuts from 1/4 inch to 3 inches thick.  
 Attachment, with 3 tips .....\$15.00

### REGULATING VALVES

Fig. 84

No. 2 Oxygen, Hydrogen, CO<sub>2</sub>, or Air Regulating Pressure Valve with 3,600 lb. steel spring, safety back, pressure tank gauge and 50, 150 or 200 lb. line gauge. Needle shut-off hose connection. Valve and gauges nickel plated.

Oxygen Regulator (long arm style) ..... \$9.70  
 3,600 lb. Gauge ..... 2.80  
 50, 150 or 200 lb. Gauge ..... 2.50

List price, complete .....\$25.00

Fig. 86

No. 1. Low Pressure Oxygen, Hydrogen, CO<sub>2</sub>, and air regulating valve with 50 lb. line pressure gauge. Valve and gauge nickel plated throughout.  
 Oxygen Regulator, 3 inch diaphragm ..... \$ 9.40  
 50 lb. Gauge ..... 2.50

List price, complete .....\$11.90

### WELDING SUPPLIES, NON-OXIDIZING

Cast Iron Rod (1/2, 3/4, 1, 1 1/2 inch) .....per lb., \$8.19  
 Norway Iron Rod (1/2, 3/4, 1, 1 1/2 inch) ..... " 28  
 Carbon Steel Rod (1/2, 3/4, 1, 1 1/2 inch) ..... " 16  
 Cast Bronze Rod (1/2, 3/4, 1, 1 1/2 inch) ..... " 86  
 Cast Manganese Bronze (1/2, 3/4, 1, 1 1/2 inch) ..... " 82  
 Tobin Bronze Rod (1/2, 3/4, 1, 1 1/2 inch) ..... " 82  
 Cast Copper Rod (1/2, 3/4, 1, 1 1/2 inch) ..... 1.02  
 Cast Iron Flux (1/2 or 1 lb. boxes) ..... .54  
 Bronze or Copper Flux ..... .68  
 Aluminum Flux ..... 1.80  
 All rods in above list are cast 16 to 18 inches, except Norway and Low Carbon Steel.

## DIRECT PRESSURE SAND BLAST MACHINE

A simple sturdy sand blasting machine of few parts, available for every kind of sand blasting work, operating at any desired pressure and with any abrasive material. Machines are tested for a 110 pound maximum working pressure, are safe, simple and easy to understand and operate.

A dished head with automatic rocking screen and automatic filling valve, allows for quick filling without the use of pail or funnel.

A coned bottom gives constant feed to the abrasive, eliminates false structural work inside of the blast and dead storage of abrasive. Air and sand feed mechanism in one piece, easily removed for examination or cleaning, eliminating the use of manhole in the tank.

Air valves are quick acting lever type, and packed to prevent leakage of air.

Every machine completely equipped ready for operation, including a Moisture Separator, 15 feet of special Sand Blast hose, 150 nozzles, operator's Hood, Respirator, and armored Gloves.

Standard machines are stocked in the following sizes:

Size	Rated Sand Storage Capacity, Lbs.	Price
1	500	\$400.00
2	1000	600.00
3 Standard Foundry Blast	2000	750.00
4	4000 and up	Special

Special machines of any size, with single or multiple hose for the use of more than one operator. These Blasts have all of the features of our Standard Hose Machines, being equipped with independent controls so that all operators are free to operate without interfering one with the other, thus avoiding the disadvantage of operating more than one hose from a single outlet.

Air consumption is governed by the size of nozzle opening and pressure maintained. Hose, with the best grade thick rubber lining, is of ample size to carry sand volume, with least wear. Every machine irrespective of its size has the same efficiency and may be equipped with any of the

different sized hose and nozzles. The following table gives air-flow and sand discharge through different nozzles at varying pressures:

TABLE OF AIR CONSUMPTION

Nozzle Opening inch	Hose Internal Diameter inch	Sand Flow lbs. per Hour	Air Flow in Cu. Ft. Free Air Per Min. Gauge Pressure						
			30	40	50	60	70	80	90
$\frac{3}{16}$	$\frac{3}{4}$	500	23	28	33	38	43	48	53
$\frac{1}{4}$	$\frac{3}{4}$	900	40	49	54	58	76	85	94
$\frac{5}{16}$	1	1300	63	77	91	105	119	134	147
$\frac{3}{8}$	1 $\frac{1}{2}$	1700	90	110	130	151	171	191	211
$\frac{1}{2}$	1 $\frac{1}{2}$	3000	161	196	232	268	304	340	376

The sand drops from the sand tank through a diaphragm (not an adjustable valve), directly into the carburetor where the air, introduced opposite the opening of the hose picks it up and drives it in a straight line through the hose out of the nozzle.

Air at the blasting pressure is admitted to the sand tank above the sand, and also to the inlet of the carburetor, directly below the sand feeding diaphragm, balancing the pressure on both sides of the diaphragm, allowing the abrasive to drop by gravity into the supporting stream of air, causing least wear possible with the handling of abrasive material.

Clogging of the apparatus is prevented by the removal of moisture from the compressed air which passes through the Moisture Separator before entering the machine and the hose line. The screen through which all the abrasive material is passed before entering the sand tank, is mounted on a rocking frame directly above the filling valve. This allows for quick filling without the use of pail or funnel.

In considering the installation of a Sand Blast machine, adapted to your own requirements, write us giving your daily tonnage, a description of the work—if possible sending catalogue, blue prints or illustrations, marked with dimensions and weight. Tell us how many cubic feet of free air per minute and what pressure is available for sand blast use, and we will be glad to advise you what you may reasonably expect from the use of a sand blast machine, based on our experience and actual practice with other plants doing a like character of work.

FOR SAND BLAST NOZZLES SEE INDEX

## BUCKEYE SURFACE HEATER AND GROUND THAWER

Hood 48 inches wide, price ..... \$125.00

### BUCKEYE PORTABLE METAL MELTING FURNACES

Built in a Number of Designs and Sizes

**Type SH** as per illustration. Will take in a Melting Pot up to 750 lb. capacity.

Price, including Pot, 450 lb. size ..... \$150.00

**Type S**, same general design but smaller. Will take in a Pot up to 450 lb. capacity.

Price ..... \$105.00

### THE BUCKEYE HEATER PORTABLE OIL BURNER

Over 5000 in daily use, among Water Works for melting lead from pipe joints; Boiler Shops, Railroads, Shipyards, Boats, Foundries, and for many operations.

Wherever there is compressed air available we advise our Type B.

#### SIZES, PRICES AND TYPES

**Type A**, complete outfit with Oil and Air Pump:

Size.....	2A	3A	4A
Price, Outfit with Single Burner.....	\$60.00	\$90.00	\$120.00
Price, Outfit with Double Burner.....	81.00	117.00	153.00

**Type B**, requires compressed air connections, but the Burner can be stopped and started instantly, best Oil Burner in the market.

Size.....	0B	1B	2B	3B	4B
Price, Outfit with Single Burner.....	\$50.00	\$60.00	\$75.00	\$96.00	\$108.00
Price, Outfit with Double Burner.....	70.00	87.00	105.00	132.00	156.00

## COMPRESSED AIR OIL PAINT SPRAYERS AND BURNERS

Fig. 567A

## No. 10 SPRAYER

The No. 10 Sprayer only needs air connection by hose and will spray oil paints, varnish and even tar paints.

Size No.	Capacity	Price
1	1 ½ qts.	\$12.00
2	3 qts.	15.00
3	5 qts.	24.00

Fig. 567B. No. 10 Sprayer

## KEROSENE BLOW TORCH AND PAINT BURNER

The Kerosene Blow Torch and Paint Burner is a recent addition to the large number of similar appliances on the market and is becoming very popular on account of its reliable performance under all conditions.

It will do all the work heretofore undertaken with gasoline torches and it is considered safer.

List price, ½ gallon.....\$15.00  
List price, 1 gallon..... 20.00

## BRAZING AND MELTING MACHINES. TORCHES

Fig. 101 HOT BLAST TUBULAR TORCH, FOR GASOLINE

Fig. 101

Capacity, 3 quarts  
Height over all, 5 ft. 9 in.  
Length of flame, 12 inches  
Diameter, 2 inches

Size of flame at burner, 2 inches  
Net weight, 11 pounds

Shipping weight, 20 pounds  
Consumption, 1 quart per hour

**For Thawing Railroad Switches.** This torch has been adopted by many of the large railroad systems for use in thawing ice in frozen switches, automatic signal mechanisms, etc. It is remarkably efficient for this purpose.

**For Destroying Insect Pests.** Large use of this torch was made this year in destroying chinch bugs and millions of dollars saved in crops. It is invaluable for this purpose and for destroying insect pests of fruit trees, moths, caterpillars, etc. It is recommended by many state agricultural colleges.

**For Burning Weeds.** No more efficient device is known for burning weeds. Its use for this purpose is more effective and labor saving than any other means.

**Other Uses.** Burning paint off large areas, skin drying moulds in foundries, preheating surfaces and many other purposes.

List price each..... \$32.00

Fig. 69 HOT BLAST BRAZING MACHINE

For Kerosene or Gasoline

Fig. 69

Two powerful burners are each mounted on swivel connections so flame can be swung up or down and around, concentrated on a single point or held straight ahead. Tripod is adjustable, allowing burners to be raised or lowered. Burners can be lifted off when desired and the flame carried to any part of the work. Work can be left under heat of one burner on the stand while the operator is using the other burner at a distance. When removed from the stand the burners are independent of stand parts; it is therefore possible to reach parts that would otherwise be inaccessible.

The tank is of seamless steel with a powerful pressure pump and air gauge. Operator can quickly obtain air pressure required.

Each burner is attached to ten feet of flexible oil tubing, making it possible for two operators to work twenty feet apart at the same time. It is especially useful for automobile repair work, motorcycles, brazing large castings, baking moulds in foundry locomotive and steel car repairing.

Capacity, 8 gallons; height on stand, 30 inches; net weight, 150 pounds; shipping weight, 250 pounds; length of flame, about 18 inches; diameter of flame at burner, 2 inches; consumption, about 3 quarts per hour.

Gasoline Torch for generating burners is supplied with each machine.

Price complete, with Stand, as illustrated...\$137.20  
Price without Brazing Stand..... 126.00  
Price with one Burner only ..... 110.40  
Price with one Burner less Brazing Stand.. 100.80

Fig. 47 HOT BLAST UNIVERSAL BRAZING FORGE

No. 47 for Gasoline

No. 47A for Kerosene

This Universal Brazier is fitted with two powerful burners, both mounted on double swing joints, so that the flames can be turned at any angle or separated any desired distance. When ordering, state if brazer is required for kerosene or gasoline. No. 47A for kerosene includes a gasoline torch for generating the burner. Size of flame at burner, 1 1/2 inches; length of flame, about 10 inches; consumption about 2 quarts per hour.

## PLUMBERS' TORCHES

The Non-Leaking Filler Plug used in all Torches shown in this catalog overcomes what has always been a very troublesome feature in using gasoline torches. It is made with a specially prepared lead washer recessed into the brass plug and held securely in place. This plug can be screwed tight with the fingers and will be found superior to any other style. There is no small washer to lose and no leather to be destroyed and rendered unserviceable by the hardening action of the gasoline. The Pump Plunger can be removed easily by unscrewing the pump cap. The leather washer can then be oiled and softened. All Torches made of polished brass.

Fig. 12

## \*Fig. 12 "OLD RELIABLE" TORCH

This is the dean of gasoline torches, it being the first torch of its kind ever placed on the market. It is probably more extensively used than any other torch made. It is filled from the top.

Capacity.....Full 1 quart	Shipping weight.....5 lbs.
Height over all.....10 in.	Consumption.....
Diameter.....4 in.	.....About ½ pint per hour
Net weight.....3 lbs.	List price.....each \$7.20

Fig. 212

shown in cut. About 3,000 degrees of heat can be obtained which is nearly double the capacity of all single valve burners. Recommended especially for light brazing, annealing light metal, brazing on used rubber tires and paint burning.

Capacity.....1 quart	Shipping weight.....5 lbs.
Height over all.....10½ in.	Consumption.....
Diameter.....4 in.	.....About ¾ pint per hour
Net weight.....3 lbs.	List price.....each \$11.75

Fig. 215

## \*Fig. 212 HOT BLAST TORCH

This is a medium priced torch, with air valve located at base of pump barrel. Well made, strong, durable and very hot. The tank is of heavy No. 18 gauge brass with brass funnel shaped bottom for filling. The burner is the improved closed generator type designed for either outdoor or inside use. Recommended for all ordinary requirements.

Capacity.....About 1 quart	Shipping weight.....5½ lbs.
Height over all.....9½ in.	Consumption.....
Diameter.....4 in.	.....About ½ pint per hour
Net weight.....3¼ lbs.	List price.....each \$6.80

## \*Fig. 215 HOT BLAST TORCH

A strictly high grade low priced Torch, with our automatic Spring Valve Pump in the handle, and which we recommended to give the best service obtainable in a torch of this type. The tank is of heavy No. 18 gauge brass with brass funnel shaped bottom for filling, fitted with the Non-Leaking Filler Plug. The Burner is the improved closed generator type designed for either outdoor or inside use. Recommended for all ordinary requirements.

Capacity.....About 1 quart	Shipping weight.....5 lbs.
Height over all.....9½ in.	Consumption.....
Diameter.....4 in.	.....About ½ pint per hour
Net weight.....3¼ lbs.	List price.....each \$6.00

## Fig. 93 DOUBLE JET TORCH

This Double Jet Torch has the Burner mounted on a swivel so that it can be turned on either side of tank as

## \*Fig. 232 HOT BLAST TORCH

Formerly No. 210

The highest grade Torch of its type. Equipped with Under-Generator Back-Flow Burner of greatest power attainable, it insures the least consumption of gasoline and delivers its maximum heat and efficiency in extreme cold and severest weather conditions.

Capacity.....About 1 quart	Shipping weight.....5½ lbs.
Height over all.....9½ in.	Consumption.....
Diameter.....4 in.	.....About ½ pint per hour
Net weight.....3¼ lbs.	List price.....each \$8.00

## Fig. 95 DOUBLE JET TORCH

For Gasoline

This Double Jet Torch has the Burner mounted on a swivel so that it can be turned on either side of tank as shown in cut. The size of flame is one-half inch at burner.

In construction these Burners differ radically from all others, at the same time they are simple and absolutely positive adjustment is quickly made. The tank is of heavy gauge brass. Recommended for light brazing, annealing light material and where a large volume of intense heat is required.

Capacity.....1 quart	Shipping weight.....5½ lbs.
Height over all.....11¼ in.	Consumption.....
Diameter.....4 in.	.....About 1¼ pints per hour
Net weight.....3¼ lbs.	List price.....each \$12.40

"Little Fiend"

Fig. 481

Fig. 91

Fig. 91—91A PORTABLE MELTING FURNACES  
No. 91 for Gasoline. No 91A For Kerosene

Constructed for melting large quantities of metal. The two powerful Giant Burners produce a large volume of intense heat, which can be regulated to suit requirements. It has the capacity to melt two hundred pounds of any of the softer metals, as lead, solder, zinc, aluminum, babbitt or tin, in eleven minutes. The shield is large enough to admit a 13½ inch melting pot. In general use by all leading street railway companies, and others. The tank is of pressed seamless steel, galvanized and tested at 150 pounds air pressure. The foot pump, as shown in cut, is used to force air pressure into the tank. When ordering, state if furnace is required for kerosene or gasoline. A melting pot is not furnished unless ordered. No. 91A for kerosene includes a gasoline torch for generating the burners.

Style No.	Capacity Gals.	Height in.	Diam. in.	Net wt lbs.	Shpg. Wt. lbs.	Net Price each

## Fig. 58 POCKET TORCH

For Alcohol—A small cotton wick draws the alcohol to the flame and by means of the small adjustable blow pipe and rubber bulb on the side the operator can blow a very fine pointed flame, producing an intense heat, suitable for small soldering and other work. It is only 1½ by 4½ inches and light and convenient to carry in the pocket or tool bag. A tight-fitting metal cap prevents evaporation. Simple, durable and always ready for use. Adapted for use of electricians, linemen, telephone and telegraph contractors, laboratory and office work.

Fig. 36—39 HOT BLAST FURNACES  
For Gasoline

The tank is made of heavy galvanized iron reinforced and strengthened at every joint. The burner is attached to a swivel joint and gives a flat flame of intense heat with positive the minimum consumption of gasoline. The top section is large enough to heat a pair of eight pound soldering coppers and melt a five inch pot of metal at the same time. The non-leaking filler plug is furnished with this furnace. Top section can be removed and tank and burner used as a torch. Recommended for tinners, iron and copper workers, plumbers and electricians.

"LITTLE FIEND" ATTACHMENT FOR  
BLOW TORCH

Heats a pair 4 lb. soldering coppers in five minutes. Can be attached to any standard make of single burner quart blow torch. Made of heavy sheet steel with bronze clamp collar.

List price .....	\$1.50
------------------	--------

FOR MELTING POTS, LADLES, SOLDERING COPPERS, ETC., SEE INDEX.

## LEAD MELTING FURNACES

These furnaces are made of 3/16 inch boiler plate for the body and are reinforced at both top and bottom with a very heavy cast iron ring. The wheels are attached to a wrought iron hub, held in position by a heavy casting which forms part of the hub and same is riveted through the body and through a protection plate placed on the inside of the body. This makes the distance between the wheels of a width so that the furnace cannot tip over, and also makes the furnace practically indestructible.

## PIG LEAD—SHEET LEAD

We carry a very large stock of Pig and Sheet Lead and are always able to furnish immediately any quantity wanted. Lowest market prices on one pig or a carload, upon request.

## PLUMBERS' AND TINSMITHS' TOOLS

### "TORRID" FURNACES

Especially constructed for Sheet Metal Workers' Use

Fig. 402A

Tanks are drawn of No. 18 gauge steel, tinned and rectangular in shape, avoiding danger of upsetting on roof-work, etc., tested at 30 lbs. air pressure. Has a brass air pump with a simple and accessible valve, cast metal hood with circular openings, for melting pot, with register cover. Is noiseless, odorless and smokeless in operation, convenient, durable and economical, using 25 to 40 per cent less fuel than any other furnace offered for like use now on the market. Has greatest range in heating, namely, 3 to 12 lb. coppers, indoors or on a roof, in cold and windy weather.

Capacity of tank.....1 gallon

Made of tough and springy rubber. Are invaluable for cleaning out closets, bowls, sinks, etc. Length 4 feet, weight less than 2 lbs.

Made with valve in cup or handle.  
Per doz.....\$8.00

FOR OAKUM AND CALKING TOOLS, SEE INDEX

### GAS FURNACES

Double Burner Gas Furnace  
For Natural or Artificial Gas

Fig. 402B

The Improved Double Burner Gas Furnace for heating soldering coppers for plumbers' or tinnerns' use has a sheet-iron top and is brick-lined, and arranged to receive two coppers. The Burner used gives an intense heat, makes no smoke and economizes time. It will prove a very desirable Furnace in every shop, as an air blower is not required when heating coppers.

Double Burner Gas Furnace.....each \$4.00

### SOLDERING COPPERS

Drawn Copper Bolts, Forged  
With Square Points for Common Use

Fig. 403F

Made of drawn copper bolts of the best quality, and are shaped under a hammer. By this method they are as solid as the metal can be made. They should not be compared with such as are cast from copper ingots.

The price quoted is a base price including all coppers weighing 3 lbs. per pair or more. Coppers of less weight take an additional net price as named below.

No. 3. Improved 1 inch square for 6, 8 and 10 inch pipe.  
Each.....\$3.00

No. 4. Improved 1 inch square for 10, 12 and 14 inch pipe.  
Each.....\$4.00

Fig. 458

## MOUND IMPROVED SCRAPING TOOLS

For Scraping Valves, Babbitt Metal, Journals, Bearings, etc.

There are six Scrapers, as shown in the cut, in each set. They vary in size from 8 to 14 inches.

The scrapers are made of the best tool steel, carefully forged, tempered and polished.

No. 1. Set of 6 Scraping Tools, in oak case.....\$2.50  
No. 2. Set of 6 Mound "Special" Hollow Ground Scraping Tools in oak case.... 3.50

## PACKING TOOLS

Will go into any valve rod pump or engine stuffing box.

Can be bent to meet any requirements. Nickel plated. The small sizes in above set are made from  $\frac{3}{8}$  inch medium from  $\frac{1}{4}$  and the large size from  $\frac{3}{8}$ -inch steel.

No. 1. Set of 4 packing tools, Nos. 6, 10, 12, 14.....\$1.50  
No. 6. Set of 6 packing tools, Nos. 6, 8, 10, 12, 14, 18..... 2.25

## Special Large Packing Tools

Made of  $\frac{3}{8}$  steel, heavy screw point.

20 inches long, nickel plated.....\$1.00  
24 inches long, nickel plated..... 1.25

## PLUMBERS' TOOLS

Hammer forged of high-grade octagon crucible steel. Properly shaped and tempered.

## BRAZING FLUX

"Anti-Borax Brazing" Flux is the strongest and most efficient flux on the market.

On account of its great strength, one fourth the quantity ordinarily used of other fluxes, is ample to do the work.

Price per pound.....\$0.10

Is applied same as borax, but as it does not boil up while fluxing it is much more economical and convenient to use.

It will make welds at 250 degrees lower heat than Borax, leaving absolutely no scale; it does not pit the steel like borax or borax compounds do. It is especially adapted to work that is fastened together or any welding where a flux is needed on the outside, as in split welds or in finishing second heats or on toealks, etc., etc.

Price per pound.....\$0.12

## BORAX

Refined and Powdered

Full barrels .....per lb. \$0.50  
Broken lots.....per lb. .10

## WELDING COMPOUND

"E-Z" sticks to the metal at a low heat and is equally good for lap, split, "V," butt or jump welding. It will weld tool, plow, open hearth, Bessemer or spring steel, making a stronger and smoother weld, at fully 250 degrees lower heat than any other compound.

Price per pound.....\$0.08

## CALDRONS KETTLES AND GLUE HEATERS

## IMPROVED STEAM GLUE HEATERS

Fig. 474

Single Heaters, are intended for use on bench where each man has his private supply of glue, or they can be arranged with stand, as shown in Fig. 474, when desired. They can be connected either through opposite sides for feed and waste pipes, or both pipes may enter from below by removing the plugs from bottom outlets, and closing outlets in sides. When desired, any number of these Single Pot Heaters can be connected together in a continuous row, or in a system of two or more rows connected with pipes.

### PRICE LIST, WITHOUT POTS

Valves shown in cuts are not included in prices, but are illustrated to show method of connecting heaters.

All sizes with stand or feet are made of same height, viz.: 30 in.	
Size 00—Takes single pot. Either 5-inch or 6-inch.	\$5.50
Extra for Stand, 40 cts.	
Size 0—Takes single pot. Either 8-inch or 10-inch.	8.50
Extra for Stand, 60 cts.	
Size A—14 inches x 14 inches x 13 inches deep.	10.00
No. 1 takes 2 5-in. pots.	No. 2 takes 1 5-in. and 1 6-in. pot.
No. 3 takes 1 8-in. pot.	No. 4 takes 1 10-in. pot.
Size B—20 inches x 14 inches x 10 inches deep.	15.00
No. 1 takes three 5-in. pots.	No. 2 takes one 8-in. and one 6-in. pot.
No. 3 takes three 6-in. pots.	No. 4 takes one 8-in. and one 5-in. pot.
No. 5 takes two 6-in. pots.	
Size C—24 inches x 20 inches x 12 inches deep.	20.00
No. 1 takes six 5-in. pots.	No. 4 takes one 10-in. and three 5-in. pots.
No. 2 takes six 6-in. pots.	No. 5 takes one 10-in. and one 8-in. pot.
No. 3 takes one 10-in. and three 6-in. pots.	No. 6 takes one 8-in. and four 5-in. pots.

## FARM BOILERS AND KETTLES

## FARM BOILERS

A Farm Boiler with a long needed improvement. The caldron of this boiler can be dumped, and the contents emptied in a minute, saving the time usually given to the slow and tedious method of dipping.

The boiler is strongly built of the best grade of cast iron. The Kettle has an extra thick bottom and is cast very smooth. Will burn either wood or coal. Price of both styles the same. Please state which kind is wanted when ordering.

No.	Capacity gals.	Price each	Wt. lbs.	Extra for Enameling

4	75	46.00	500	12.00

Fig. 1401

Fig. 1402A

Fig. 1402

## STEEL BOILERS

We offer in the line of plain Steel Boilers a higher quality boiler than can usually be found at a price such as we ask. The jacket, or outside shell, is made of heavy sheet steel. The edges are banded for reinforcement, and the jacket has no bottom, permitting its use outdoors on the bare earth. If preferred, the bottom may be filled with earth or bricks, as illustrated. Furnished with double doors so it can be used for coal, if fitted with coal fixtures.

Fig. 1402B

No.	Capacity gallons	Weight lbs.	Price each	No.	Capacity gallons	Weight lbs.	Price each

5	53	255	18.00	10	110	500	36.00

## STEAM JACKETED KETTLES

Made of very thick metal, and are packed with asbestos sheet packing. Have ample steam space, and are tapped for inlet and drip pipes. Unless specially ordered, we will furnish tanks tested to 75 pounds (hydraulic) pressure to the square inch.

The inner and outer bowls are cast separately, permitting renewal or replacing of inner bowl if used for acids or corrosive substances. Special fittings and attachments can be furnished to order. Kettles can be fitted with any size outlet pipe.

## Plain Kettle without Curb

### ASPHALT POT

An outfit used by highway division superintendents for small patching jobs. Inside pot lifts out and can be used as pouring pot.

Has cast iron grate for burning coal; 14 inch diameter wheels; outside shell,  $\frac{3}{8}$  inch; inside tank, No. 16 steel; capacity, 10 gallons. Note the Pot sets firmly in outside shell.

Price, each. .... \$115.00

Fig. 594B.

## COMBINATION GRAVEL, SAND, TAR OR ASPHALT HEATER

Fig. 594C.

This Combination Heater and Dryer is especially adapted for street repair work, roofers and municipalities. The fire cylinder is made of  $\frac{1}{4}$  inch boiler steel, insuring maximum heating surface, preventing warping and clogging. Note adjustable levers in the rear which operate and regulate side doors, allowing any quantity of dried sand or gravel to pass. Either side can be operated separately.

The Heater has semi-spherical bottom and rests in cylinder as shown, thereby insuring maximum heating surface and strength. Made of No. 10 boiler steel. All seams welded, non-leakable.

Has one furnace—separate yet combined.

Fifth wheel has proper construction for easy riding over rough roads. Economical, strong and durable.

Size of Dryer: Length, 3 feet 6 inches; width, 4 feet; capacity, 17 cubic feet. Size of tank: Length, 3 feet; width, 2 feet 3 inches; capacity, 100 gallons. Weight, 1,800 lbs.

Front wheel, 18 inch diameter,  $4\frac{1}{2}$  tire, 2 inch square axle. Rear wheel, 24 inch diameter,  $4\frac{1}{2}$  tire, 2 inch square axle.

Price, each. .... \$440.00

FOR SHOVELS, HOES AND SAND SCREEN, SEE INDEX

## ASPHALT, TAR AND PITCH KETTLES

Fig. 595A

## STYLE "N"

Specially constructed for highway work. Has all the advantage required, namely, quick heating. Note heating space all around inside tank. Two 2 inch draw valves either end. Large fire and cleanout door, both strongly reinforced with angle iron. Burns any size wood. Adjustable handle can be raised or lowered. Axle strongly braced by angle iron which acts as support to outside shell.

Has barrel heating top easy to handle; also dipping top which makes entrance to inside of kettle very accessible as well as very convenient for adding to dipping material; removed by four bolts. Inside tank welded throughout, removed by six bolts.

Constructed for contractors who appreciate service, economy and durability. Most complete heater of its kind.

Wheels, 44 inch diameter, 4x $\frac{1}{2}$  inch tire. Axle, 2 inches square. Capacity, 150 gallons. Length, 66 inches Width, 37 inches. Height, 48 inches. Weight, 1,150 lbs.  
List price each.....\$260.00

## STYLE "L"

This Kettle is specially constructed for the contractor who has to work on asphalt streets where they require protection. Can be used for heating any substance and is equipped with or without 1 $\frac{1}{2}$  inch draw cock.

1 $\frac{1}{2}$  barrels, capacity. Size, 28x34. Weight, 225 lbs. Made of No. 12 fire box steel. Made to stand 6 or 8 inches above street as required.

List price each.....\$86.00

Fig. 595B

## STYLE "G"

Specially adapted for contractors who have small patching jobs and do not care to heat a larger body of material than required. Constructed with welded guaranteed non-leakable inside tank. Will heat the thickest substance with same results. No leaks. Inside tank lifts out easily. Has two handles. Can be used on roof if so desired. Has closed fire bottom and door.

Capacity,  $\frac{1}{2}$  barrel. Size, 21x26. Weight, 80 lbs. Construction of No. 14 fire box steel.

List price each.....\$40.00

Fig. 595C

FOR TAR, PITCH, OAKUM, ETC., SEE INDEX

## ASPHALT, TAR AND PITCH KETTLES

Fig. 596A

## STYLE "E" NON-LEAKABLE KETTLE

Made in three sizes. Constructed to take care of any roof. Also used by large plants for their upkeep. Has a guaranteed non-leakable inside tank, easily removed. Shell welded on all seams and supported by angle iron. Has four handles. The 100 and 60 gallons have two lids, the 25 gallon, one. Made of No. 12 steel throughout.

Capacity	Size	Weight	Price
100 gal.	30x30x57	350 lbs.	\$96.00
60 gal.	26x30x40	275 lbs.	75.00
25 gal.	26x30x32	200 lbs.	64.00

## STYLE "F &amp; H" HEATER

Made in two sizes. Constructed for large roofing contractors. Also used by street contractors. Wheels 36 inches in diameter, 3x½ inch tread. Moves easily on any character of new or rough roads. Made to track 5 feet 2 inches wide, 2 inch solid crank axle, reinforced sides. Furnished with wood or iron wheels, with or without faucet. Has closed fire bottom. The quickest heater on the market.

Fig. 596B

## STYLE "F" 100 GALLON CAPACITY

3 feet 6 inches high.  
Size, 48x33 inches.  
Made of No. 12 fire box steel.  
Weight, 625 lbs.  
Price each.....\$198.00

## STYLE "H" 50 GALLON CAPACITY

3 feet 6 inches high.  
Size, 28x34 inches.  
Made of No. 12 fire box steel.  
Weight, 500 lbs.  
Price each.....\$158.00

Fig. 596C

## STYLE "D" KETTLE

Constructed to take care of the average roof. Can also be used by street and water proofing contractors for heating water or any other substance. Inside tank welded throughout, guaranteed non-leakable. Has closed fire bottom and door.

Capacity, 1½ barrels or 50 gallons.

Size, 28x34 inches.

Weight, 200 lbs.

Made of No. 12 fire box steel throughout.

Price each.....\$66.00

Fig. 597A.

### STYLE "A" NON-LEAKABLE WELDED PORTABLE ASPHALT HEATER

Made in three sizes, especially constructed for road, street and municipal contractors. Outer shell made of  $\frac{1}{2}$  inch boiler steel thoroughly reinforced; all seams welded. Inside tank made of  $\frac{1}{8}$  inch boiler steel, easily removed for cleaning; all seams welded. Removable lid, lined fire box and cast iron grate bars. Wheels constructed for hard and heavy use, 30 inches in diameter,  $4 \times \frac{1}{2}$  inch tread. Handle constructed of "T" bar.

125 gallon capacity.....	each, \$166.00
175 gallon capacity.....	" 214.00
225 gallon capacity.....	" 250.00

Fig. 597B.

### STYLE "B" NON-LEAKABLE WELDED FOUR WHEEL ASPHALT TAR AND PITCH HEATER

Especially constructed for street and municipal contractors. Outer shell made of  $\frac{1}{2}$  inch boiler steel, thoroughly reinforced, all seams welded. Inside tank made of  $\frac{1}{8}$  inch boiler steel, all seams welded, easily removed, lined fire box, cast iron grate bars and removable lid. Wheels designed and set to withstand long and hard use.

300 gallon capacity.....	each, \$388.00
400 gallon capacity.....	" 450.00
500 gallon capacity.....	" 516.00

Larger sizes on application.

### STYLE "C" ARCH NON-LEAKABLE WELDED ASPHALT, TAR AND PITCH KETTLE

Constructed for roofers who roof large areas. Has no equal in construction for strength. Will stand up under any kind of use. Round corners; can dip clean. Also used by street contractors to lay rails where pitch is used as a binder.

Constructed of No. 12 fire box steel throughout. Weight, 175 lbs. Size, 30x30x40.

Capacity, three barrels or 100 gallons.....each \$48.00

Fig. 597C.

FOR DIPPERS, TAMPERS, AND PAILS, SEE INDEX

## STREET AND SIDEWALK CONTRACTORS' EQUIPMENT

### STANDARD TOOL HEATER AND FIRE WAGON

This Wagon is strong and substantial. Made of  $\frac{3}{8}$  inch boiler steel with sides and heads perforated. Has  $3\frac{1}{2}$  inch flange around top. Is fitted with sloping ash pan to facilitate cleaning. Has removable grate bars made in sections easily replaced. Has arched tool supports; also cross bars and hooks for holding melting pots.

Length of body, 5 feet 6 inches; width of body, 2 feet 7 inches; depth, 1 foot.

Front wheels, 18 inches in diameter,  $4 \times \frac{3}{8}$  tire, 2 inch square axle. Rear wheels, 24 inches in diameter,  $4 \times \frac{3}{8}$  tire, 2 inch square axle. Weight, 1150 lbs. List price each. . . . . \$250.00

Fig. 593A

### CAULKING FURNACE

This handy Caulking Furnace will be appreciated by all caulkers as a light, well-made furnace, which will do away with building fires on streets and at the same time affords the caulker a clean, neat furnace, large enough for any job, yet as compact as a suit case.

All tools, material, fuel, overalls and funnel can be packed into bottom fire place, and the entire furnace kettle and all carried around as handy as a suit case.

Size: 16 inches high, 18 inches long, 9 inches wide. Weight, about 19 lbs.

List price complete. . . . . \$7.50

Fig. 593B

Fig. 593C

### ROOFERS' BARS

We carry in stock a full line of bars of every description, from the lightest to the heaviest, all made with steel ends, well tempered.

Price each. . . . . \$4.00

Fig. 595D

### POURING CAN

Cut represents a Can for filling seams in brick or wood pavements. Has cast iron point, wood handle and  $\frac{3}{8}$  rod to control flow, made of galvanized steel. Very cheap and useful.

Price each. . . . . \$1.50

### MORTAR AND CEMENT MIXING PAN

Made of No. 12 fire box steel, with welded corner, making same non-leakable. Especially made for roofers and building contractors. Has four handles.

Length, 8 feet. Width, 3 feet 4 inches. Depth, 8 inches. Weight, 150 lbs. Capacity, 17 cubic feet.

List price each. . . . . \$33.00

Fig. 595E

## ASPHALT AND CONCRETE TOOLS

## ASPHALT PATCHING HOE

Fig. 542A  
No. 10 Steel

Blade 10 inches wide by  $8\frac{3}{4}$  inches high; stamped teeth one side 1 inch pitch by 1 inch deep.  $\frac{1}{4}$  inch pipe handle, length 7 feet 10 inches.

Each .....\$3.50

## SMOOTHING IRONS

Fig. 590E

Made of cast iron, ground to a smooth curve surface, provided with  $1\frac{1}{4}$ " pipe handle bent at end and with steel stud which is cast in smoother, to which pipe is welded.

Made in two sizes.

13x8", weight 50 lbs.....\$7.00

Tool Steel, Hand Tempered  
Weight, each, 27 lbs.  
Each .....\$4.50

## ROOFERS' SUPPLIES

### MASTIC BOILERS

Special Mastic Boilers are provided with bottoms so constructed to allow the boiler being knocked down to clean or ship.

Made of heavy black steel with all corners well angled and braced. Has large fire space.

By removing a few bolts this boiler can be set in small space. Note the sand heating pockets.

Capacity about 100 gallons.

Price ..... \$60.00

### GALVANIZED PAY OFF PAILS

For those who wish a good, inexpensive Pay Off Pail the above cuts show a galvanized pail with all seams riveted and soldered, made with flat or round spouts.

Price with either spout ..... \$3.00

### MOP PAIL—DIPPER HOISTING PAIL

Fig. 1 Mop

Fig. 1 Dipper

Fig. 1 Hoist

We believe the Lyman Riveted Pails and Dippers to be the best ever put on the market. They are used by a large majority of the roofers in Chicago. All work is made of steel (double annealed), with Norway Iron trimmings, closely riveted.

The dipper handle is riveted to heavy plate and brazed. This is then riveted to body of dipper.

Pails have convexed bottom, which allows pails to be moved over felt without danger of cutting.

No. 1. Mop Pail, 8 gallons.....Each \$4.50  
No. 1. Hoisting Pail, 6 gallons... " 4.00  
No. 1. Dipper, 1½ gallons..... " 2.50

### MOP PAIL—DIPPER HOISTING PAIL

Fig. 2 Mop

Fig. 2 Dipper

Fig. 2 Hoist

For those who desire a cheaper set of Pails and Dippers we are now furnishing the above—seamed. These goods are well made, hold the same as the riveted Pails and with care will last and give good satisfaction. They are machine seamed and one grade of iron lighter than the Riveted Pails.

No. 2. Mop Pail, 8 gallons .....Each \$3.00

## ROOFERS' SUPPLIES

## PAY OFF PAIL

The old reliable Lyman Pay Off Pail has been on the market for years, is used by most contractors, and we have never had one returned for repairs.

Made of heavy black steel with all joints closely riveted and brazed. Has raised bottom and swing handle, top, bottom and hood are protected with bands. Spouts are riveted and brazed.

Price, Pail.....\$5.00  
Price, Spouts, each..... 1.00

## GRAVEL PAILS

Made of black steel, raised bottom, top and bottom bands.

This pail has rope handle stapled to outside, can't slip and will last for years. A trial will convince you they are the best. Price, per dozen.....\$18.00

## CARRYING PAIL

Made of heavy black steel, closely riveted, and has top and bottom bands, swing handle. Used in connection with Pay Off Pails. Price.....\$3.00

FOR ROOFERS' BROOMS, MOPS AND KNOT BRUSHES, SEE INDEX

## ROOFERS' DERRICK AND WHEEL

We offer the roofers a derrick which we believe will meet with their approval; made of second growth hickory, free of knots; well ironed. Carried in stock in light and heavy style.

Price, heavy.....\$18.00  
Price, light..... 16.00

Our Roofers' Wheel is heavy cast, with wrought iron shield and hook, roller bearing. Price....\$4.00

## ROOFERS' BARS

## Mastic Mixing Bar

We carry in stock a full line of bars of every description, from the lightest to the heaviest, all made with steel ends, well tempered.

Light steel.....\$2.50

## ROOFING PAPER

**CERTAIN-TEED ROOFING****1, 2 and 3 Ply Smooth Surfaced**

Made from long fibred, soft, absorbent rag stock felt carrying extra abundant saturation of the Certain-Teed blend of asphalts, the slowest drying saturation science has developed. No coal tar or quick drying saturants are used. Rolls 32 inches wide, containing 108 square feet (8 feet for laps). Large Head Nails and Lap Cement with directions in each roll.

- 1-ply, guaranteed 5 years, weight about 35 lbs. complete .....  
 2-ply, guaranteed 10 years, weight about 45 lbs. complete .....  
 3-ply, guaranteed 15 years, weight about 55 lbs. complete .....

**CERTAIN-TEED SHINGLES****Red or Green Slate Surfaced**

Combine permanent color, beauty, fire protection, great durability and low cost. The beautiful color of the crushed slate is natural and so cannot fade. Size 8x12 $\frac{3}{4}$  inches. Laid  $\frac{1}{2}$  inch apart and 4 inches to the weather. 424 shingles to a square—about 230 lbs. 4 cartons to a square.

**CERTAIN-TEED ROOFING****Red or Green Slate Surfaced**

Same material as Certain-Teed Shingles but in roll form. Put up and packed the same as Certain-Teed Roofing. Weight about 80 lbs. per square complete.

**MAJOR ROOFING**

Well up to the quality standard of the average first grade roofings offered by most manufacturers. Put up and packed the same as Certain-Teed Roofing.

- 1-ply, weight about 35 lbs. complete .....  
 2-ply, weight about 45 lbs. complete .....  
 3-ply, weight about 55 lbs. complete .....

**GUARD ROOFING**

Makes a waterproof and entirely satisfactory roof for temporary purposes. Put up and packed the same as Certain-Teed Roofing.

- 1-ply, weight about 35 lbs. complete .....  
 2-ply, weight about 45 lbs. complete .....  
 3-ply, weight about 55 lbs. complete .....

**SENTINEL ROOFING**

Made specially to enable the trade to meet any price competition. Contains no coal tar. Better than the old time Tar Ready Roofing. Put up and packed the same as Certain-Teed Roofing.

- 1-ply, weight about 35 lbs. complete .....  
 2-ply, weight about 45 lbs. complete .....  
 3-ply, weight about 55 lbs. complete .....

**Write for Prices.** We are prepared to furnish one roll or a train load at lowest market price.

## FELT, SHEATHING, PLASTER AND WALL BOARD, ROOFING SUPPLIES

### INSULATING PAPER BLACK CARBONIZED

A strong paper saturated and coated with the finest grade blend of Asphalts. Specially designed for Ice Houses, Refrigerators, and wherever insulation against moisture is desirable. Odorless. Acid proof. Vermin proof.

Medium. Weight about 20 lbs. in 500 sq. ft. rolls, 36 in. wide.  
Heavy. Weight about 35 lbs. in 500 sq. ft. rolls, 36 in. wide.  
Ex. Heavy. Weight about 45 lbs. in 500 sq. ft. rolls, 36 in. wide.

#### Saturated only

No. 30 Insulator. Weight about 30 lbs. in 500 sq. ft. rolls.  
No. 45 Insulator. Weight about 45 lbs. in 500 sq. ft. rolls.

### SLATERS FELT

Slaters Asphalt Felt 32 in. wide, about 30 lbs. per roll of 100 sq. ft.

### TARRED FELT

No. 1. 32 in. wide, about 20 lbs. per 100 sq. ft., 216 sq. ft. per roll.  
No. 2. 32 in. wide, about 15 lbs. per 100 sq. ft., 324 sq. ft. per roll.  
No. 3. 32 in. wide, about 12 lbs. per 100 sq. ft., 500 sq. ft. per roll.  
Stringed Felt. 32 in. wide, about 22 lbs. per roll of 250 sq. ft.  
Stringed Felt. 32 in. wide, about 44 lbs. per roll of 500 sq. ft.  
Slaters Felt. 36 in. wide, about 30 lbs. per roll of 500 sq. ft.

### ROSIN SIZED SHEATHING

No. 20. About 20 lbs. in 500 sq. ft. rolls, 36 in. wide.  
No. 25. About 25 lbs. in 500 sq. ft. rolls, 36 in. wide.  
No. 30. About 30 lbs. in 500 sq. ft. rolls, 36 in. wide.

No. 40. About 40 lbs. in 500 sq. ft. rolls, 36 in. wide.

### DEADENING FELT

No. 40. Width 36 in., about  $\frac{3}{4}$  lb. to the sq. yd., rolls contain 50 sq. yds.  
No. 50. Width 36 in., about 1 lb. to the sq. yd., rolls contain 50 sq. yds.  
No. 75. Width 36 in., about  $1\frac{1}{2}$  lbs. to the sq. yd., rolls contain 50 sq. yds.  
No. 100. Width 36 in., about 2 lbs. to the sq. yd., rolls contain 50 sq. yds.

### WALL BOARD

Made of clean wood fibre. Sized thoroughly to take paint and to resist moisture. By actual test the strongest and best waterproofed board made. Affords opportunity for artistic panel effects. An inexpensive material more quickly applied than plaster and without the dirt. For finishing modest houses, for partitioning offices or large rooms, for portable screens, for attics and dens and booths.  
Size: Widths, 32 inches or 48 inches. Lengths, 6, 7, 8, 9, 10, 12 14 or 16 ft.

### STANDARD BOARD

Made of paper stock. One side sized and finished in a beautiful brown. A very strong board. Sizes same as above Board.

### BLUE AND GRAY PLASTER BOARD

250 sq. ft. rolls, 36 in. wide, weigh about 30 lbs.  
500 sq. ft. rolls, 36 in. wide, weigh about 60 lbs.

### PLASTIC CEMENT

A putty-like compound, durable and perfectly waterproof for plastering over cracks, holes or weak spots in roofs, basements, cisterns, waterspouts, troughs, etc. An excellent waterproofing. Adheres to any surface.

Full or  
 $\frac{1}{2}$  bbls.

SEND US YOUR INQUIRIES FOR ONE ROLL OR A CARLOAD. OUR PRICE IS ALWAYS RIGHT

## ASBESTOS PRODUCTS

In purchasing a covering for heated surfaces, it is of the utmost importance to take into consideration the number of years the covering will last and do good service, as well as its powers for resisting high temperature, and its non-conducting properties.

The durability of coverings varies greatly in the different kinds. Some will break or fall off the heated surfaces or become otherwise defective in a year or two. Others, being unable to resist high pressure, become charred or burned and are thus useless as insulators.

A good covering should be one that can be removed when necessary to make changes, or repair leakage or other damage to pipes, and be replaced without injury to itself.

The fittings, such as ells, tees, crosses and valves, are of exactly the same formation as the sectional covering and are so shaped as to fit any of the joints perfectly without extra labor being required to trim or form them so as to make neat, perfect joints.

The covering and fittings are furnished ready for application, a sufficient quantity of small staples being supplied with each shipment.

"Imperial" All Asbestos Pipe Covering

Sectional View  
"Celasbestos"

"Celasbestos" Sectional Pipe Covering

"W. B." Pipe Covering

Eureka Pipe  
Covering

Asbestos Moulded Covering

**"IMPERIAL" ALL ASBESTOS PIPE COVERING**

Our "Imperial" is made of alternate layers of pure indented asbestos felt, and plain asbestos felt, wire stitched at the edges, and covered with a heavy canvas jacket.

It is light in weight, will stand all extremes of heat, is firm and elastic, will not sag on the pipes, is not affected by moisture, will not crack nor crumble from vibration, can be removed and replaced a hundred times if necessary without injurious results as it is practically indestructible. It is an ideal covering for train pipes and has been adopted by many railway companies for that purpose.

**"CELASBESTOS" SECTIONAL PIPE COVERING**

For High Pressure Steam Pipes. This covering is formed in regular sections three feet in length, of alternate layers of plain and fluted asbestos, canvassed on the outside, and secured to the pipes with metal bands. It is light in weight, strong, fireproof, non-conducting, not injured by steam or moisture, and easily applied, entirely suited for all high pressure work. Will not crack or powder from vibration of pipes. Made in three thicknesses,  $\frac{1}{2}$  inch,  $\frac{3}{4}$  inch and 1 inch.

NOTE—Our "Imperial" All Asbestos Fittings are supplied with this covering.

**"W. B." PIPE COVERING**

The perfection of insulating protection for steam pipes and all heated surfaces. There are no better non-conductors of heat known than asbestos and wool felt, and in our "W. B." covering these have been combined, producing the best results, there being consecutive layers of asbestos (about one-eighth of an inch thick) about the pipe, outside of this the wool felt with a canvas cover or jacket. This covering is easily applied, is removable and lasts as long as the pipes themselves. Will not crack, crumble or fall away from the pipes. When necessary staples are used in applying.

**ASBESTOS MOULDED COVERING**

Asbestos Moulded Covering will stand heat of the highest steam pressure without disintegrating, and being chemically treated in its manufacture, it is not affected by moisture. If this covering is soaked in water and dried again, it becomes as hard and firm as when originally made. It is a good non-conductor, very durable, and will outwear any other similar covering on the market.

This covering is made of asbestos fibre and other light non-conducting materials. It is very strong; is absolutely fireproof and is adapted for highest steam pressure. It will not crack and is made to fit pipes of all diameters from one-half inch upward. The fittings are furnished of the same materials and fit perfectly.

It can be easily applied to hot or cold pipes by any practical man. We always send with this covering sufficient metal bands to securely fasten it to the pipes.

**EUREKA PIPE COVERING**

For all low pressure steam pipes and hot water pipes, we consider this to be an excellent covering, filling all requirements. It is made of wool felt and asbestos. Sections three feet long, canvassed over, with fittings for ells, tees, valves, etc., of same material.

We sometimes supply for rough or temporary work this same covering without the canvas jacket at a slightly reduced price.

**STANDARD PRICE LIST OF SECTIONAL PIPE COVERINGS AND FITTINGS**

When asking for quotations always state steam pressure for which covering is to be used.

Prices of covering shown in this list are for lineal feet.

NOTE—For all pipes above ten (10) inches the use of Asbestos Moulded Blocks is recommended.

## ASBESTOS PRODUCTS

## HOT WATER PIPE COVERING

Same construction as Eureka covering, wool felt with asbestos next to the pipe. About  $\frac{1}{2}$  inch thick, canvas jacket.

A most suitable covering for hot water pipes, return pipes, hot air, etc., also for use in basements where it is desired to keep certain rooms or apartments cool. In sections 3 feet long.

See Price List on Preceding Page.

## AMMONIA AND BRINE PIPE COVERING

We carry a special covering for these purposes. In chemical plants, breweries, cold storage houses, etc., a great deal of damage is done by the sweating of pipes, and considerable loss is experienced. By the use of these coverings, this is avoided, and the saving will, in a short time, fully repay for the expense of covering the exposed pipes and surfaces.

**CAUTION**—In applying the Ammonia and Brine Pipe Coverings, great care should be exercised to the covering will prove useless. We furnish a special cement in liquid or paste form for this work, also for covering all fittings. When this cement and waterproof canvas are used, and care is exercised to see that all laps come on the under side of the pipe, there can be no possibility of moisture working in and injuring the covering itself. Liberal use of this cement is recommended.

See Price List on Preceding Page.

## ASBESTOS AND HAIR FELT COVERING

An excellent non-conductor, light in weight. Suitable for all ordinary steam pressure. Made in sections 3 feet long. Composed of an inner lining of heavy asbestos felt, then standard hair felt covering with another layer of asbestos felt and finally finished with a heavy sized paper. We can also supply it with canvas cover if desired.

The outer layer of asbestos is used to protect the hair felt and render the covering more fireproof. The necessary staples and strips for covering and fastening all laps and joints are always included in making shipments. Special fittings go with this covering.

See Price List on Preceding Page.

## FROST PROTECTIVE COVERING

To prevent freezing in gas and water pipes, we furnish, in 3 feet sections, a covering that is most economical and efficient.

When pipes are exposed we can supply a wrapper of canvas, which can be painted, or of waterproofed felt.

See Price List on Preceding Page.

**TAKE NOTE**—Where any of the aforementioned coverings are exposed to the weather, or where moisture or dampness are liable to affect their usefulness or durability, we can supply a heavy canvas cover which has been thoroughly saturated with pure asphalt and other waterproof and preservative materials.

## HAIR FELT

In bales of 300 square feet, standard thickness, always in stock.

## BOILER COVERING OR LAGGING

## "IMPERIAL" ALL ASBESTOS BOILER COVERING OR LAGGING

The "Imperial" boiler covering or lagging is essentially of the same formation as the covering heretofore mentioned with the exception of being in sheet form.

It is furnished with or without canvas jacket and can be fastened when applied, by using staples, or the sections can be laced together.

It is recommended for covering large or irregularly shaped surfaces such as upright and horizontal boilers, both stationary and portable, drums, domes, heaters, stills, breechings, etc.

Cement work when torn off for repairs to the heated surfaces has to be replaced with new material, whereas the "Imperial" can be laid aside, the work completed and the same section replaced. The elasticity is another good feature, allowing the covering to be shaped to fit almost any irregular surface. As a covering for locomotives and marine boilers it is vastly superior to others and has merits that recommend it for these uses. As a result of constant jarring some coverings will crumble and fall away while the "Imperial" will remain as firm and useful as when first applied. Stock size sheets 24x36 inches. Special sizes and shapes to order.

## CELASBESTOS FIREPROOF LAGGING BLOCKS

Made in blocks or sheets formed by use of successive layers of our Celasbestos as described on another page. The layers are placed so that the air space runs at right angles to that in the adjoining layers.

The sheets are adapted for all heat insulating purposes, such as covering boilers, heaters, large flues, ceilings, fire doors, etc.

Any thickness from  $\frac{1}{2}$  to 3 inches. Stock sizes 3x3 feet. Special sizes as required.

Can be conformed to any curved surface by slitting a few layers on the under side.

For prices, see table at bottom of this page.

## ASBESTOS MOULDED BLOCKS

There are many large surfaces such as boilers, stills, domes, heaters, etc., that cannot be covered with the sectional covering and for this work we especially make moulded blocks, which are easily applied to the surface and can be securely and cheaply fastened by the use of a large mesh wire screen. To make a more presentable appearance this screen can be covered with a thin coat of our asbestos cement felting, thus giving the work a smooth finished appearance. Special sizes, shapes and thicknesses made to order.

Made in blocks or slabs 3 or 4 inches wide, 18 inches long and 1 or 1 $\frac{1}{2}$  inches thick.

## Standard Price List For Sheet and Block Coverings

Thickness Inches	Price per sq. foot	Thickness Inches	Price per sq. foot	Thickness Inches	Price per sq. foot	Thickness Inches	Price per sq. foot
$\frac{1}{2}$	\$0.27	$\frac{1}{2}$	\$0.42	$\frac{2}{4}$	\$0.64	$\frac{2}{4}$	\$0.87

## ASBESTOS PRODUCTS

## ASBESTOS CEMENT FELTING

A dry cement, prepared by mixing asbestos fibre and other non-conductive and cementing materials to render them available for covering large and irregularly shaped surfaces, such as boilers, stills, domes, heaters, etc. When mixed with water to the proper consistency, it is easily applied either by hand or with a trowel. We furnish this cement in two qualities.

"A" Brand .....	per sack	\$3.50
"B" Brand .....	"	3.00

**NOTE**—In applying our cement coverings, better results can be obtained when they are applied over an air-space formed of wire cloth and studs.

## ASBESTOS FLEXIBLE ROOFING CEMENT

Composed of finely ground asbestos mixed with iron paint and other water and acid-proof materials. Prepared ready for use; elastic and very adhesive.

Used for cementing or patching tin, metal or composition roofs, around chimneys, skylights and dormer windows. For imbedding tile or slate and repairing leaks of all kinds. Supplied in red, brown or black colors.

Will not become hard and useless when opened unless left exposed for a considerable time.

## ASBESTOS HOT BLAST CEMENT

A strictly first-class fire-proof cement, especially adapted for covering surfaces exposed to a high heat, such as hot blast pipes, smoke pipes, furnaces, retorts, etc., also used as fire-proof deadening under floors and roofs. Covering capacity of this cement, 40 square feet 1 inch thick.

Price per barrel or bag .....

## ASBESTOS FURNACE CEMENT

For lining heating stoves, furnace doors, repairing broken joints in furnaces, etc.

When subjected to intense heat it vitrifies without becoming porous or shrinking. Will not harden if package is unopened.

400 to 600 lb. casks .....	per lb. \$0.04
100 lb. tubs .....	" .04½
25 to 50 lb. tubs .....	" .05½
10 lb. cans .....	" .10

3 lb. cans .....	" .15

## ASBESTOS RETORT CEMENT

Invaluable for "setting up" or repairing broken clay or iron gas retorts, pipes, etc.; and for cementing joints in stone and metals. Is acid proof and vitrifies under intense heat, very strong and durable. Prepared ready for use, not affected by gas, oils, etc.

400 to 600 lb. casks .....	per lb. \$0.04
100 lb. tubs .....	" .04½
25 to 50 lb. tubs .....	" .05½
10 lb. cans .....	" .10
5 lb. cans .....	" .12
3 lb. cans .....	" .15

## ASBESTOS MILL BOARD

One of the most economical packings for chemical works, oil stills, flange joints, cylinder heads, insulation in stoves, ranges and ovens, also for lining grates, ceilings, etc. Fire-proof and acid-proof, made soft, medium and hard. Stock size, 40x40 inches, 42x44 inches and 44x48 inches; special sizes to order. Thicknesses from ½ to 1 inch.

Price per pound .....

**Note**—We are furnishing an extra hard, even and smooth surfaced board for making fire backs or back walls in grates and fire places, natural gas fires, etc. Also extra hard sheets for glass workers' use, cut to any size. We furnish a very superior quality of Asbestos Mill Board for electrical purposes.

## Approximate Weight Per Sheet 40x40 Inches

1/16 in. .... 3½ to 4 lbs.	3/8 in. .... 22 to 24 lbs.
¼ in. .... 8 to 8½ lbs.	½ in. .... 30 to 35 lbs.
¾ in. .... 15 to 16 lbs.	

Intermediate thicknesses, proportionate weights of full cases average 250 to 300 lbs.

## ASBESTOS ROLL MILL BOARD

In rolls of ½ and ¾ inch in thickness, 36 inches wide.

Price per lb. ....

## GLASS HOUSE SHEETS

Hard, stiff, flat sheets of asbestos specially prepared for glass workers' use and for carrying small heated articles.

## CELASBESTOS CORRUGATED ROLL LAGGING

Constructed of a layer of corrugated or fluted asbestos paper, backed by a sheet of plain asbestos. An excellent non-conductor for wrapping furnace pipes, hot air flues, to prevent burning of woodwork from overheated pipes. It is flexible, can be easily wrapped around curved surface and fastened with wire or metal bands. Put up in rolls 36 inches wide; 250 square feet to roll.

Price per square foot .....

## ASBESTOS STOVE LINING CEMENT

A plastic cement composed of asbestos and fire-proof-cementing materials. Used as a bed for laying fire-brick or facing walls subjected to great heat, lining cooking stoves, heating stoves and furnaces, mending broken iron or brick linings. Will not warp or burn off.

400 to 600 lb. casks .....	per lb. \$0.04

## CEMENT FINISHING TOOLS

 $\frac{3}{8}$  INCH RADIUS NARROW EDGER

Nos. 38, 39

Length 8 inches, width  $1\frac{1}{4}$  inch, has a  $\frac{3}{8}$  inch turned edge with radius of  $\frac{3}{8}$  inch.

No. 38. Iron, Nickel Plated...per doz. \$8.00

No. 038. Bronze ..... " " 17.00

 $\frac{3}{4}$  INCH RADIUS NARROW EDGER

No. 39. Iron, Nickel Plated...per doz. \$8.00

No. 039. Bronze ..... " " 17.00

## CURBING EDGER

No. 100

This tool is used for edges of curbs. It has a slightly oval surface. Length  $6\frac{1}{2}$  inches, width  $3\frac{1}{2}$  inches, 2 inch turned edge, with a radius of  $1\frac{1}{2}$  inch.

No. 100. Iron, Nickel Plated...per doz. \$14.40

No. 0100. Bronze ..... " " 21.60

## BEVEL EDGER

Nos. 18, 40

For beveling the edge of steps, walks, etc. The following tools are 6 inches long by 2  $\frac{1}{2}$  inches wide.

Tool with  $\frac{3}{8}$  inch Bevel

No. 40. Iron, Nickel Plated...per doz. \$7.00

No. 040. Bronze ..... " " 16.00

Tool with  $\frac{5}{8}$  inch Bevel

No. 18. Iron, Nickel Plated...per doz. \$7.00

No. 018. Bronze ..... " " 16.00

## SQUARE EDGER

No. 17

For finishing edges of steps, walks, carriage blocks, or wherever it is desirable to have edges square. Length 6 inches, width 3 inches, both ends rounded, cutting edge  $1\frac{1}{2}$  inch.

No. 17. Iron, Nickel Plated...per doz. \$10.00

No. 017. Bronze ..... " " 17.00

## CORNER TOOL

No. 6

For finishing inside corners of steps, etc. Has one end straight and one end curving back, allowing the user to work in corner against framework. Length 6 inches, width of sides  $1\frac{1}{2}$  inch.

No. 6. Iron, Nickel Plated...per doz. \$7.00

No. 06. Bronze ..... " " 16.00

## RESIDENCE CURB TOOL

No. 45

For finishing top of curb or abutment at sides of residence steps, walks, etc. Has guides which run on the framework. With this tool the top of the curb is finished a perfect half round.

No. 45. Iron, Nickel Plated...per doz. \$18.00

No. 045. Bronze ..... " " 30.00

## CURB GUTTER TOOL

Nos. 26, A26

For finishing the curve formed in making a combined curb gutter having the right curvature for this purpose. Length 6 inches, width of sides 3 inches.

No. 26. Iron, Nickel Plated...per doz. \$14.40

No. 026. Bronze ..... " " 24.00

Ten inches long, width of sides 3 inches. Preferred by many workmen on account of the length.

No. A26. Iron, Nickel Plated...per doz. \$20.00

No. A026. Bronze ..... " " 33.00

## GUTTER TOOL

No. 8

Used in making gutters for drainage purposes. Length 6 inches, width  $3\frac{1}{2}$  inches, 1 inch deep.

No. 8. Iron, Nickel Plated...per doz. \$14.40

No. 08. Bronze ..... " " 21.60

## CEMENT FINISHING TOOLS

## SIDEWALK JOINTERS

Nos. 1 and 3

Width 2½ in., length 6 in., with both ends rounded, cuts ½ in. deep.

No. 1. Iron, nickel plated.....per doz. \$ 7.00

No. 01. Bronze ..... " 16.00

Jointer, 9 in. long, 3 in. wide, cuts ½ in. deep.

No. 3. Iron, nickel plated.....per doz. \$10.20

No. 03. Bronze ..... " 21.60

## JOINTER

No. 5

This Jointer is desirable in making clean sharp joints against the framework, as it has one straight end. Width 3 in., length, 6 in., cuts ½ in. deep.

No. 5. Iron, nickel plated.....per doz. \$ 8.00

No. 05. Bronze ..... " 17.00

## JOINTER

No. 27

With fastened handle. This tool has a slightly oval surface. Length 5 in., width 2½ in., cuts ⅞ in. deep.

No. 27. Iron, nickel plated.....per doz. \$ 7.00

No. 027. Bronze ..... " 17.00

## NARROW JOINTER

No. 41

Both ends rounded. Width 1¾ in., length 8 in., cuts ½ in. deep.

No. 41. Iron, nickel plated.....per doz. \$ 8.00

No. 041. Bronze ..... " 17.00

## NARROW STRAIGHT END JOINTERS

Nos. 42, 36

The following Jointers are 1¾ in. wide, 8 in. long, one straight end and one rounded.

½ inch Cutting Blade

No. 42. Iron, nickel plated.....per doz. \$ 8.00

No. 042. Bronze ..... " 17.00

¾ inch Cutting Blade

No. 36. Iron, nickel plated.....per doz. \$ 8.00

No. 036. Bronze ..... " 17.00

FOR SHOVELS, HOES, ETC., SEE INDEX

## DRIVEWAY GROOVERS

Nos. 7, 19, 24

Both ends rounded. These Groovers make wide grooves in the driveway so that horses will not slip. Length 9 in., width 3 in., making U-shaped groove ¾ in. deep.

No. 7. Iron, nickel plated.....per doz. \$10.20

No. 07. Bronze ..... " 21.60

Length 9 in., width 3 inches, making V-shaped groove ¾ in. deep.

No. 19. Iron, nickel plated.....per doz. \$10.20

No. 019. Bronze ..... " 21.60

Length 6 in., width 2¾ in., cuts V-shaped groove ¾ in. wide, ½ in. deep.

No. 24. Iron, nickel plated.....per doz. \$ 7.00

No. 024. Bronze ..... " 16.00

## DRIVEWAY GROOVER

No. 25

One end straight. Length 6 in., width 3 in., cuts groove ¾ in. wide and ½ in. deep.

No. 25. Iron, nickel plated.....per doz. \$ 8.00

No. 025. Bronze ..... " 17.00

## ¾ INCH RADIUS EDGER

No. 2

Length 6 in., width 2¾ in., has a ¾ in. turned edge, with radius of ¾ in. Both ends rounded.

No. 2. Iron, nickel plated.....per doz. \$ 7.00

No. 02. Bronze ..... " 16.00

## ¾ INCH RADIUS EDGER

No. 4

Both ends rounded. Length 6 in., width 3 in., has a 1 in. turned edge, with a radius of ¾ in.

No. 4. Iron, nickel plated.....per doz. \$ 8.00

No. 04. Bronze ..... " 17.00

## CIRCLE EDGERS

Nos. 57, 58

For finishing inside or outside of any circular work. 5 in. long, 2 in. wide, ¾ in. radius.

## Inside Circle Edger

No. 57. Iron, nickel plated .....per doz. \$ 6.00

No. 057. Bronze ..... " 12.00

## Outside Circle Edger

No. 58. Iron, nickel plated.....per doz. \$ 6.00

No. 058. Bronze ..... " 12.00

## CEMENT AND PLASTER FINISHING TOOLS

Nos. 13, 21, 22

### SQUARE CAST IRON CONCRETE TAMPERS

Furnished with 4 ft. hardwood handles

No. 13. 6x 8 in., weight 16 lbs.....	each \$1.30
No. 21. 8x 8 in., weight 19 lbs.....	" 1.50
No. 22. 10x10 in., weight 27 lbs.....	" 2.00

Nos. 72, 73

### DIRT TAMPERS

Furnished with 4 ft. hardwood handles.

No. 72. Round, 6 in. size, weight 15 lbs.....	each \$1.40
No. 73. Round, 7 in. size, weight 17 lbs.....	" 1.60

No. 59

### ALUMINUM FLOAT

Cast in one piece from special hard aluminum. Corrugated both ways, which produces a sand finish on walls. Length 10 in., width 4 in.

No. 59. Corrugated Face.....each \$2.00

No. 52

### ALUMINUM FLOAT

A light Float of good wearing qualities, much better than wood or cork. Length 12 in., width 4 1/2 in.

No. 52. Smooth Face.....each \$2.00

Nos. 53, 71, 54

### ALUMINUM HAWKS

Face of Hawk has a satin finish which prevents the mortar from slipping when the Hawk is tilted.

No. 53. Size 13 x 13 in.....	per doz. \$33.00
No. 71. Size 13 1/2 x 13 1/2 in.....	" 34.00
No. 52. Size 14 x 14 in.....	" 35.00

FOR WHEELBARROWS, HODS, ETC., SEE INDEX

Nos. 68, 69

### STEEL FACE TAMPERS

Furnished with 4 ft. hardwood handles.

No. 68. 8x 8 in., weight 15 lbs.....	each \$1.80
No. 69. 10x10 in., weight 18 lbs.....	" 2.00

No. 35

### PIEN END TAMPERS

Furnished with 4 ft. hardwood handles. This Tamper is used in making steps, curbs, etc. Large end is 3x4 in. Pein end is 1x4 in.

No. 35. Pien End Tamper, weight 11 lbs.....each \$1.60

No. 848

### ALUMINUM DARBY

Made of special hard rolled aluminum. Provided with 2 detachable wooden handles. Length 40 in., width 3 1/2 in.

Aluminum Darby .....each \$2.75

Fig. S49

Cut showing Jointer or Groover attached to clamp and 6 ft. hardwood handle

Clamp fitted with a 6 ft. hardwood handle, nicely finished. This clamp is made from either hard bronze or malleable iron, supplied with 3 strong bolts with steel thumb nuts. One side of clamp has square holes to fit the square shoulder of bolts, thus preventing bolts from turning when tightened. This clamp and handle will meet the demand of any concrete worker because any of our tools can be used in connection with same. Long Handle and Clamp, either in malleable iron or bronze. Weight each. 2 1/2 lbs.....each \$2.00

## CEMENT FINISHING TOOLS

## CORRUGATING TOOL

Fig. 44

For making a rough surface on driveways, walks, etc., to prevent slipping, makes grooves  $\frac{3}{4}$  in. deep,  $\frac{3}{8}$  in. apart. Length 6 in., width  $4\frac{1}{2}$  in.  
 No. 44. Iron, nickel plated.....per doz. \$14.40  
 No. 044. Bronze ..... " 24.00

## ROLLER JOINTER

Fig. 48

For finishing curb and sidewalk joints. Cylinder is 2 in. long, 2 in. in diameter.  
 No. 48. Iron, nickel plated.....per doz. \$10.20  
 No. 048. Bronze ..... " 18.00

 $\frac{3}{4}$  INCH ROLLER EDGER

Figs. 49 and 50

Cylinder is 2 in. long, 2 in. in diameter with  $\frac{3}{4}$  in. turned edge, having  $\frac{3}{8}$  in. radius.  
 No. 49. Iron, nickel plated.....per doz. \$10.20  
 No. 049. Bronze ..... " 18.00

 $\frac{3}{4}$  INCH ROLLER EDGER

Cylinder is 2 in. long, 2 in. in diameter, with 1 in. turned edge, having  $\frac{3}{8}$  in. radius.  
 No. 50. Iron, nickel plated.....per doz. \$10.20  
 No. 050. Bronze ..... " 18.00

## RADIUS TOOLS

Figs. 23 and 11

For laying out and finishing curves and circles. Its shape permits the finishing of either the inside or outside of any size circular work.

Tool with  $\frac{3}{8}$  inch Radius

No. 23. Iron, nickel plated.....per doz. \$ 6.00  
 No. 023. Bronze ..... " 12.00

Tool with  $\frac{3}{4}$  inch Radius

No. 11. Iron, nickel plated.....per doz. \$ 6.00  
 No. 011. Bronze ..... " 12.00

## LONG HANDLE TROWEL

Made from the best tempered steel. Mountings and handle cast in one piece from aluminum and riveted securely to blade. This tool is light and strong, and will stand hard usage. The knuckle makes it possible to work in any angle. Trowels 20 and 24 inches long, width 5 inches, fitted with a 6 ft. hardwood handle and adjustable clamp.

FIG. 839

like the steel trowels. Length either 20 or 24 in., width 5 in., fitted with a 6 ft. hardwood handle and adjustable clamp.  
 20 in. Float, weight each  $4\frac{1}{4}$  lbs.....each \$5.50  
 24 in. Float, weight each  $4\frac{1}{2}$  lbs..... " 5.75

## RAISED TUCK POINTER

Fig. 12

Used by masons for making raised beading or pointing between cement blocks, stone, brick, etc. Length over all  $9\frac{1}{2}$  in., length of blade 5 in. Width of blade made in following sizes:

$\frac{1}{8}$  in.,  $\frac{1}{4}$  in.,  $\frac{3}{8}$  in.,  $\frac{1}{2}$  in.,  $\frac{3}{4}$  in.  
 No. 12. Iron, nickel plated.....per doz. \$ 6.00  
 No. 012. Bronze ..... " 12.00

## No. 15 INDENTATION ROLLER

Fig. 15

Is used for imprinting surfaces on walks and prevents them from becoming slippery. Makes square impressions  $\frac{3}{4}$  in. apart. Length of cylinder 10 in., diameter 4 in.

No. 15. Iron, nickel plated.....each \$ 4.00  
 No. 015. Bronze ..... " 12.00

## No. 16 DRIVEWAY ROLLER

Fig. 16

For grooving driveways and stable floors so horses cannot slip. Length of cylinder 10 in., diameter 4 in.

No. 16. Iron, nickel plated.....each \$ 4.00  
 No. 016. Bronze ..... " 12.00

## No. 20 LINE ROLLER

Fig. 20

For finishing walks or sloping places, leaving the surface with the appearance of bush hammered stone. Length of cylinder 10 in., diameter 4 in., 6 grooves to the inch.

### CONCRETE SPUD OR SIDEWALK SCRAPER

Fig. 554

These tools are useful in many ways, not only in construction work but street railways use them to remove snow and ice from switch frogs. Bill posters remove old posters from bill boards with them, and roofers often use them for ripping old paper from roofs. In addition they are unusually efficient as sidewalk scrapers for removing ice and snow.

Fitted with 4 ft. hickory handles.

Medium 7 in. blade, 3 in. deep	per doz. \$6.00
Heavy 7 in. blade, 6 in. deep	per doz. 8.00
Extra handles	each .30

It will be noted that the crayons on this page are all labeled "Lumber" crayons. This is simply a name that has come down through the past, and has no particular significance concerning the uses to which the crayons may be put. The crayons on this page are now used by railroads, surveyors, nurseries, textile mills, steel manufacturers, and in shipping rooms as well as by lumber companies, who were the first users of these crayons.

# SIDEWALK, SEWER PIPE AND CEMENT BLOCK STAMPS AND BRANDS

## ROTARY CEMENT STAMP FOR SEWER PIPES AND BLOCKS

Fig. 931

These Stamps are very convenient and easy to manipulate, making a very clear impression. They will not break or mar the pipe or block, as the letters go into the cement gradually. Prices on application. Give lettering wanted.

## SIDEWALK MARKERS

Fig. 932

## BRASS OR IRON

For imprinting name of Street into Cement Sidewalks at Street intersections.

Style of Letters

These letters are cut very sharp and deep, thus insuring a good clear impression. In this manner the name of street is imprinted into sidewalk to last indefinitely. The lower edge of each letter is square, forming a guide to print absolutely straight. They are very easily spaced. Each letter has a handle.

Put up in a neat box containing 27 letters, 1 period, 1 comma, 1 dash, 1 straight edge.

## CARBORUNDUM PRODUCTS

CARBORUNDUM RUBBING BRICKS AND STONES  
(Other Carborundum products are listed in the index)

Fig. 210

Under the head of Rubbing Bricks and Stones are manufactured a great variety of different shapes and sizes of stones for dressing and smoothing granite and marble, also for scouring castings, chilled iron and steel rolls used in tin plate mills, rolling mills, etc. These stones are not squared up and dressed, but are packed as they come from the kilns. There is practically no limit to the possibility of manufacture in this line, and while we list a few sizes most commonly used and carried in stock we are prepared to furnish, when called upon, any size or shape of any grit, from the coarsest to the very finest powder. We shall be pleased to quote prices on any plain or irregular shapes. These stones are all made by the vitrified process, and can be used dry or with water or oil. Made in any grit from 20 to FF.

## CARBORUNDUM RUBBING BRICKS FOR CONCRETE WORK

## Not Illustrated

For dressing down concrete surfaces, removing form marks, and cleaning moulds and forms. They are fluted for removing form marks, surfacing and general work. They are much more efficient than the pieces of sand stone sometimes used for this work. The flutes give a shear cutting action and allow a clearance for the surplus material removed. Just the right size for hand work. Made in 20 grit.

## HELMETS AND GOGGLES

### GAS MASKS

This mask, or helmet, is a simple device which protects from gas and smoke fumes. It contains about 45 cubic feet or a sufficient quantity of air to sustain a person from five to eight minutes; and the manner of obtaining this air is quick and effective. Simply shake (swing) the mask to and fro three or four times and put it quickly over the head. It fits so snugly around the neck that no fume can enter.

It is already in use in fire departments, gas works, mines, storage houses, breweries, ice factories, department stores, hotels, homes, boiler rooms and in many places where one is in danger of being overcome by fumes.

Price, each .....\$3.50

This mask can also be furnished with air intake to be used in cement mills, cement cars, etc., so it can be worn all day.

Price, each .....\$3.50

### SAFETY HELMET

Fig. 701

ing same, Helmet will last indefinitely.

Some prefer the Helmet fitted\* with side screens, as this affords the wearer a wide range of vision, and are especially desirable where men are working close together.

No. 700. Fitted with front and side screens .....each \$4.50

No. 701. Fitted with front screen only.  
Each ..... 4.00

This Helmet has been devised to fill a long-felt want for sand-blasting and kindred use. Gives absolute protection to the face, head and neck.

Made of strong khaki cloth with visor cap of the same material. Helmet is fitted with fine wire mesh screens fastened by means of snap glove-fasteners. These screens are interchangeable; by renew-

## Endorsed by the U. S. Government

Records from Newman Grille Clocks assure that patrolmen have not neglected their beats in

U. S. Life Saving Service where constant alertness must be assured.

West Point Military Academy where efficiency is a first consideration.

Sandy Hook Proving Grounds where intrusion must not be permitted.

Interstate Commerce and Panama Canal Commissions, Post Office and Treasury Departments where tamper-proof evidence of faithful safe-guarding is demanded.

U. S. Naval Observatory where the nation's time is established.

The Pennsylvania Railroad is the world's largest user of watchman's clocks. They have ordered in the past few years, over \$30,000 worth of the Newman Grille Watch-Clocks.

One of the first essentials to reduce fire and accident hazard is the watchman in making his hourly rounds during nights, Sundays, holidays and at such other times as premises are not occupied or in operation. Insurance companies endorse such an installation by granting a rate reduction which goes a long way toward paying for the clock.

The keys of these clocks are fastened and sealed at the various stations so that they cannot be removed without detection.

The clock itself is locked while in possession of the watchman and equipped with a pricking device which registers on the paper dial every opening and closing and the exact time at which the opening and closing take place. By keeping the locking and winding keys and the supply of used and unused dials inaccessible to the watchman, he cannot open the clock or otherwise examine or tamper with his records, without being detected. The user of a spurious key can never know the result of his attempts, yet each is recorded upon the paper dial and will be discovered on the following morning.

Fig. 605A

The paper dials are usually arranged for twenty-four hours to provide a record for Sunday and holiday registering, without any one having to go to the plant on those days to change the dials. 12 hour dials may be had if desired. Registration on the same dial for two nights is made possible by the watchman starting his rounds on the half hour on the second night instead of on the even hour as on other nights.

## PRICES ON COMPLETE OUTFITS

Including watch-clock, pouch with carrying strap, standard patrol boxes with marking keys attached, patrol box seals and 375 (one year's supply) dials.

## FIRST AID CABINETS

## FIRST AID IN ACCIDENTS

Thirty states have enacted laws making a First Aid Cabinet mandatory in certain industries.

By installing a First Aid Cabinet you can get a merit rating with the companies who carry your compensation insurance, all of whom are recommending first aid, everywhere. What you save this way will more than pay for your first aid cabinets.

The necessity for prompt aid in accidents or injury needs no argument. Be as careful as we like, a certain number of accidents take place in all occupations, and it is not only our duty to help them but also to lessen and mitigate as much as lies in our power the suffering and bad effects of those which do occur. If there is one fact more recognized than another it is this—that the immediate treatment in the case of any

injured person has a positive influence and a most important bearing upon the subsequent progress of the case. The interval which elapses between the occurrence of the accident and the arrival of medical aid or the transference of the injured to a hospital is fraught with much moment to the unfortunate sufferer. As in the case of fire, the first five minutes are most important either in an accident or sudden illness. It is possible that the right thing may be done but it is just as likely that proper aid may not be applied and serious harm may follow or a valuable life may be lost.

## JOHNSON'S FIRST AID CABINET No. 1

In several states Johnson's First Aid Cabinet No. 1 has been specified by many of the municipalities. It has been adopted by several of our chief railroad systems as a shop first aid equipment.

The dimensions of this Cabinet are: Length, 20 inches; width, 13 inches; depth, 3½ inches; weight, 12 pounds. The Cabinet is made of heavy decorated japanned metal, with strong hinges and fasteners, hangers to hang Cabinet against the wall, and convenient handles for carrying. It is in every respect a portable and substantial container. The interior is partitioned and the contents packed that they are kept in good order and are readily accessible. Simple directions for the use of the various articles are printed upon the inside of the cover; and in each Cabinet a Johnson's First Aid Manual is enclosed giving explicit directions for the treatment of injuries before the arrival of the surgeon.

## CONTENTS OF JOHNSON'S FIRST AID CABINET No. 1

Two Johnson's "First Aid for Wounds" Packets, No. 3.  
Two ounces Red Cross Absorbent Lint.  
Two Burn Dressing Packets, No. 22.  
Four packages Red Cross Absorbent Gauze, each containing one yard.  
Two packages Red Cross Absorbent Cotton, each containing four ounces.  
One spool Johnson's "Z O" Adhesive Plaster, 1 inch wide, 5 yards long.  
Six Red Cross Cotton Roller Bandages, 2 inches wide.  
Six Red Cross Cotton Roller Bandages, 2½ inches wide.  
Four Linton Gauze Bandages, 1 inch wide.  
Eight Linton Gauze Bandages, 2 inches wide.  
Six Linton Gauze Bandages, 2½ inches wide.  
One Tourniquet.  
One jar Carbolyzed Petrolatum.  
One bottle for Camphenol Antiseptic Solution. One bottle Camphenol.  
One bottle Aromatic Spirits of Ammonia.  
Four Wooden Splints, 3¼x13 inches.  
Two packages Safety Pins. One pair Scissors. One pair Tweezers.  
One sample Synol Soap.  
One Johnson's First Aid Manual.  
One Triangular Bandage Hanger.

The Cabinet also has a supply of Accident Report blanks for use in reporting accidents to the superintendent or other authority, blanks for checking supplies and ordering refills and an illustrated chart showing uses of triangular bandage, etc.

List price complete ..... each \$12.00

## WOOD'S EMERGENCY CASE No. 6

Size 7x9x2½ Inches

This case is designed for camp, automobile, launch, home or small shop, where a compact and convenient accident outfit is desired. The case is black japanned metal, hinged cover with fastener.

Two First Help for Wounds Packets.

Two yards Red Cross Gauze.

One ounce cotton.

Four gauze bandages.

Two cotton bandages, assorted.

One spool "Z O" Adhesive Plaster.

One tube Carbolyzed petrolatum for burns and scalds.

One tourniquet, to stop hemorrhage.

One pair scissors.

One pair tweezers.

Safety pins.

One sample Synol Soap.

One sample Toilet and Baby Powder.

Handbook of First Aid.

List price complete ..... each \$6.00 Wood's Emergency Case No. 6

No. 47 "JUNIOR" WAGON LAMP  
With 2 1/4 Inch Ruby Rear Lens  
(Cold Blast)

Designed to meet the requirements of the State and City laws regulating night lights on horse-drawn vehicles. It has been improved by adding a clip-spring holder in addition to the combination socket taking a round or flat bracket. The lamp is carried on the side of the vehicle, lighting the road ahead and at the same time showing a red danger signal to the rear.

Has a bright corrugated tin reflector and a magnifying bullseye lens in front of flame; also a 2 1/4 inch ruby rear lens together with all the latest cold blast lantern improvements.

Furnished only in black enamel with flat bracket and complete with globe. Specify for right or left hand.

Fig. 77

Fig. 71 "PIONEER" STREET AND PLATFORM LAMP

(Cold Blast)

For Post or Bracket

Has been on the market for more than 30 years. The original of all globe tubular street and platform lamps. Requires no chimney and gives a steady light double that of an ordinary gas street lamp and at much less cost. It may be filled, lighted and regulated without removing the globe. Has a self-extinguishing device that may be set to burn for a certain number of hours.

For years the "Pioneer" has been the standard of the U. S. Government and many railway systems. It is much used for village lighting.

Furnished in green enamel, same with brass or glass fount, and all brass, green enamel, complete with globes.

## RAILROAD LANTERN—LANTERN GLOBES

## IMPROVED "STEEL CLAD" R. R. LANTERN

(No. 39 PATTERN)

With Outside Wick Raiser

The **IMPROVED "STEEL CLAD"** Railroad Lantern is made with flat steel upright guards and skeleton base. It is a giant in strength and very compact. It will outlast three ordinary railroad lanterns.

The **"Steel Clad"** is equipped with a newly patented winglock burner which fits into a slip collar and rests on a fibre washer permanently secured to the fount. A short turn of the wrist securely locks the burner to same. The oil fount is held securely to the frame by a patented automatic retaining spring, which permits the fount being removed with one hand. The fount is provided with a safety oil well.

While our New No. 39 Vulcan Globe with square shoulder on top and bottom is furnished with all our No. 39 Railroad Lanterns, any regular 39 globe will fit all No. 39 frames. Can furnish with wire guard if desired.

Furnished in bright tin, with or without globe.

## LANTERN BURNERS AND WICKS

Dietz No. 201

Dietz No. 252

## LANTERN BURNERS

In ordering always advise what lantern you want the burners for.

The burner is the most important Lantern part.

The lantern burners listed below are of the most advanced type. They are more substantial than brass burners, do not heat so readily, produce a whiter flame and have longer life.

The different numbers listed below are not all the burners we carry in stock. We can furnish burners for any lamp you may have.

List prices are not shown here, as they depend largely upon the costs of materials entering into the manufacture of the burners. We will quote the lowest prices upon receipt of your inquiry.

## TINNED STEEL BURNERS

## HOT BLAST TYPE FOR USE WITH KEROSENE

**Dietz No. 401 Burner:** (Plain cone—no catch)  $\frac{5}{8}$  inch wick. Can be used in place of regular burner on "Monarch," "Iron Clad," "Crystal," "Underwriter's" Mill and "King" Fire Department Lanterns.

**Dietz No. 411 Burner:** (Winglock cone)  $\frac{5}{8}$  inch wick. Used on "Little Star," "Victor" and "Monarch" Lanterns, "Buckeye" Dash Lamps and "Victor" Wagon Lamps.

**Dietz No. 421 Burner:** (Hinge cone)  $\frac{5}{8}$  inch wick. Used on "Hy-lo," "Crystal," "Iron Clad," "King" Fire Department and "Underwriter's" Mill Lanterns.

**Dietz No. 431 Burner:** (Rising Cone)  $\frac{5}{8}$  inch wick. Used on "O. K." Lanterns.

**Dietz No. 462 Burner:** (Winglock cone) 1 inch wick. Used on No. 2 "Royal" Lanterns.

## COLD BLAST TYPE FOR USE WITH KEROSENE

**Dietz No. 201 Burner:** (Winglock cone)  $\frac{5}{8}$  inch wick. Used on "Junior" Lanterns, and "Junior" Wagon Lamps.

**Dietz No. 211 Burner:** (Rising cone)  $\frac{5}{8}$  inch wick. Used on "Little Wizard" Lanterns and "Ideal" Inspectors' Lamps.

**Dietz No. 221 Burner:** (Slotted cone)  $\frac{5}{8}$  inch wick. Used on No 15 Side Lamps.

**Dietz No. 252 Burner:** (Slotted cone) 1 inch wick. Used on No. 2 "Blizzard" Mill Lanterns.

**Dietz No. 262 Burner:** (Winglock cone) 1 inch wick. Used on No. 30 "Beacon Lights."

**Dietz No. 272 Burner:** (Rising cone) 1 inch wick. Used on No. 2 "Blizzard," Special No. 2 "Blizzard" and "Wizard" Lanterns, No. 2 "Blizzard" Dash Lamps and No. 2 "Wizard" Wagon Lamps.

**Dietz No. 282 Burner:** (Rising cone) 1 inch wick. Used on "D-Lite" Lanterns.

## GASOLINE LAMPS AND TORCHES

Fig. 2B

Fig. 25

**"B & W" 1-MANTLE BEACON  
No. 2-B**

Exactly the same lamp as No. 25 except that the tank is overhead so as to avoid making a shadow under the lamp. This lamp is especially recommended for contractors. Can be strung on a wire, above the heads of workmen, and out of their way. Hangs with tackle or pole. Mica chimney. Price, complete .....\$16.00

Fig. 446

**"B & W" PRESSURE LAMP No. 25**

The handiest light ever invented. Hangs like an arc, sets down like a lamp, carries like a lantern. Useful in or out of doors; gives as much light as an electric arc for half a cent an hour. Weather-proof, simple, safe and absolutely satisfactory. Mica chimney and shipping box. Pressure automatically kept up until empty.

One thousand candle-power. Consumes one gallon of gasoline in twenty-four hours. Shipping weight, 18 pounds.

Price .....\$12.50  
14 foot iron pole and tackle..... 6.00

**WALL OR BANJO TORCHES**

These Wall Torches are well made, strong, durable and reliable in every particular, and their light is large, clear and bright. The wind will not put out the flame, and rain, cold or heat does not affect it.

The tank is finished in hard baked japan. Pipe is black japanned and runs through tank from bottom to top where it is securely fastened. A connecting joint in pipe just below tank simplifies packing which proves a convenience in shipping. The globe valve and generating burner are made of brass.

**PRICE LIST WALL OR BANJO TORCHES FOR GASOLINE OR COAL OIL**

Single burner .....	per doz. \$24.00	Double burner .....	per doz. \$42.00
---------------------	------------------	---------------------	------------------

Can furnish galvanized at additional price. In ordering state if wanted for gasoline or coal oil.

**THE STORM KING LANTERN**

**200 CANDLE-POWER**

Fifteen Hours on One Quart of Gasoline

The Storm King Lantern is intended to supply the need of a strong, unwavering, safe and convenient, portable outdoor lamp or lantern, for the use of farmers, planters, dairymen, stockmen, contractors, watchmen and merchants, and for lighting street shows and fairs, circuses, carnivals, docks, quays, ships, motorboats, railroad yards, freight sheds and way stations. In fact, the field for the sale of the Storm King is almost unlimited and it "fills the bill" in every case and gives entire satisfaction.

It only weighs 3½ lbs. net and is 14 inches high, 6 inches in diameter, therefore, it is about the same size and weight as the ordinary lantern, but the light produced is 20 to 30 times as great.

If it is dropped from a great height or thrown on the ground with sufficient force to break the fount, the light is extinguished instantly and before the flame can ignite the gasoline escaping from the fount.

It is guaranteed for five years by the oldest, largest and most reliable manufacturer of gasoline lighting devices.

Price, complete .....\$6.50

Fig. 200C

## GASOLINE FLOOD LIGHTS

Fig. 77

### "B & W" No. 77 HAND SEARCHLIGHT

This is an ideal light for construction work where a lot of light is to be thrown on one spot. Particularly adapted for trench digging, well sinking, etc., or any similar purpose. Carries like a lantern, sets down like a lamp and hangs like an arc.

Five thousand candle power. Height 2 feet, weight 30 pounds. Polished brass. Absolutely weatherproof. Throws a beam 50 feet wide and 300 feet long.

Price, complete.....\$50.00

### "B & W" PORTABLE FLOOD LIGHT No 99

The most powerful portable flood-light on earth. Especially useful for lighting large areas. Used to light all the big automobile races. An excellent light for tearing down and wrecking buildings. Absolutely weatherproof. Light all thrown in one direction. Ships in two pieces.

Twelve thousand candle power. Rays cover an area 250x400 feet. Consumes one gallon of gasoline in six hours. Shipping weight, 80 pounds. Height, 3½ feet.

Price, complete.....\$100.00

### "B & W" MANTLE BOX

This box will store and carry used mantles safely, and will save you a considerable expense. It is substantially built of wood and has a handle and latch.

## BUCKEYE CARBIDE FLARE LIGHTS

For Contractors and Railroads

Size No. 4C

Adjustable Burners varying from 2000 to 12,000 Candle Power can be supplied without extra charge.

We strongly recommend the standard sizes as listed; they are more efficient and less liable to get out of order.

## PRICES AND SIZES

**Size 2A.** 1000 Candle Power.

Price .....\$50.00

**Size 2C.** Either 3000 or 5000 Candle Power. Single Cylinder 6 hours with extra Cylinder 12 hours.

Price, with one Cylinder.....\$50.00

Price, with extra Cylinder..... 60.00

**Size 3C.** 5000 Candle Power. We sell more of this size than all other sizes combined.

Price .....\$70.00

**Size 4C.** 10,000 Candle Power.

Price .....\$110.00

**Type S.** For Wrecking Cranes, Steam Shovels, etc.

**Size 3S.** 5000 Candle Power. Includes Generator, 25 feet Armored Hose, Burner, Reflector and fittings.

Price .....\$96.00

**Size 4S.** 10,000 Candle Power. Same as Size 3S except with Double Generator and 2 Reflectors.

Price .....\$140.00

## BUCKEYE CARBIDE LAMP

FIREMAN AND BUILDER'S PATTERN

Adapted for  
Fire Departments  
Tunnels  
and  
General  
Building  
Operations

Gives 500 Candle Power 10 hours or 4000 Candle Power 1½ hours. Size of Generator, 7x14 inches.

Price .....\$25.00

Valuable also in Mines, Docks, Shop Use, Inspectors' Work, etc.

## THE CHALLENGE CARBIDE FLARE LIGHT

Will Use Either Cake or Regular Commercial Carbide

2000 Candle Power for 2 cents per hour.

Cost of operating is only one-half that of Lights using Coke Carbide.

Reflector is Aluminum and can be swung to any angle.

Has no intricate parts and is easy to handle.

Is built heavier and stronger than most flares.

Price .....\$30.00

It is as fool-proof as it is possible to make a portable light.

For Carbide, see Index

Fig. 2404Z  
No. 2  
5,000 Candle Power

Fig. 2406XG  
No. 3W  
15,000 Candle Power

These lights are used by contractors, railroads, building constructors, mines, quarries, industrial plants, etc. They burn more than half air, are smokeless and incandescent. The flame can be regulated from the maximum light to a needle point. They light instantly and require no attention during use. They use ordinary commercial carbide and are the most economical source of high-power illumination on the market.

## ELECTRIC FLOOD LIGHTS—MAZDA LAMPS

Foundation of Rialto Theatre, Chicago.  
Illuminated with X-Ray Floodlight

Adjustable for long light thrust or close-up diffusion. Furnished for direct conduit connection or with adjustable swivel attachment. Easily moved from place to place.

Reflector made of fire glazed glass, backed up with pure silver. Absolutely waterproof. Well ventilated, easy to focus and install. Designed so all parts are accessible. Cover snaps like automobile headlight. Sturdy construction and built for hard service.

Price, each .....\$19.50

## X-RAY FLOODLIGHT PROJECTOR

67,000 Candlepower with a 250 Watt Lamp

A powerful, compact and durable flood and searchlight, ideal for contractors and builders for night-work illumination. Particularly adapted for excavation and construction operations. Very economical, using only a 250 watt floodlight lamp.

Fig. 51. X-Ray  
Projector, Swivel  
Attachment

## MAZDA LAMPS

In listing the common straight side Mazda lamps, we are showing only the sizes which are most frequently used, although we are prepared to furnish them in sizes up to, and including 1000 watts, or about 1350 candlepower. Always give voltage of your power circuit when ordering Mazda lamps.

### TRIMO WOOD HANDLE NARROW JAW PIPE WRENCH

Fig. 704D

Invaluable for "Auto Kits" and for close-quarter work

The jaws are narrowed materially, and can be used in places where the ordinary width of jaw cannot operate. Made in three sizes only—6 inch, 8 inch, and 10 inch.

It is light in weight, and particularly designed for Automobile and Gasfitters' use. No outfit complete without this tool.

Special length of chain to order. No. 3 Wrench adapted to take 16 inch pipe if desired.

## COCHRAN PIPE WRENCH

Fig. 707C

The handle and frame are made in one piece. This gives a compression strain instead of a shearing strain on the frame pin or rivet, and eliminates the repair charges which usually result from injury to a wrench through side-pull.

## PRICE LIST

## TRIMO PIPE CUTTER

Fig. 707D

No thread in the frame or roll block to wear out. A small case hardened nut adjusts the handle screw, and is easily and cheaply replaced when worn. The wheels are drop-forged, have long hubs, affording ample bearing on pins. Used as a single wheel with rolls, pipe is cut without a burr ready for the threading die. Easily converted into a three-wheel cutter by simply substituting two wheels for the two rolls.

Sizes .....	No. 1	No. 2	No. 3
Cuts Pipe .....	$\frac{1}{2}$ to 1 $\frac{1}{2}$	$\frac{1}{2}$ to 2	1 $\frac{1}{2}$ to 3

IDEAL SELF-FEED TUBE CUTTER

(Wiedeke Patent)

This Tube Cutter is the only one the market today that has solved the problem of cutting off steel tubes without cracking them.

New tubes are cut off the same distance from the boiler head no matter if they project out 1/2 inch or 4 inches (see illustration); they are cut with a bevel ready for beading, and rolled at the same time.

For cutting out old tubes on the inside of boiler heads, simply set the guards back, as shown in illustration, which can be done in less than half a minute.

## 20-PIECE TOURISTS AUTO KIT

A very practical and useful assortment, suitable for the medium priced cars. It has tools necessary for any ordinary repairs.

All tools are high grade and guaranteed. Tool roll is made of heavy brown duck, with pockets for each tool, bound with leatherette and has heavy web strap and slip buckle.

Contains the following Tools:

No. 23 Semi-finished 15° Angle Drop Forged Wrench.  
No. 25 Semi-finished 15° Angle Drop Forged Wrench.  
No. 27 Semi-finished 15° Angle Drop Forged Wrench.  
No. 29 Semi-finished 15° Angle Drop Forged Wrench.

Single Jaw Wrench, half-polished.  
9-inch Ebony Automobile Wrench.  
3-inch Electricians' Round Shank Screwdriver.  
5-inch Electricians' Square Shank Screwdriver.

9-inch Machinists' All-steel Screwdriver.  
7-inch Flat File.  
6-inch Ebony, Adjustable, Combination Pliers.  
3/8-inch Solid Punch, half-polished, 1/4-inch Point.  
3/8-inch Center Punch, half-polished.  
1/2-inch Cold Chisel, half-polished.  
1/2-inch Cape Chisel, half-polished.  
5-inch Cotter Pin Extractor.  
8 oz. Machinists' Ball Pein Hammer.  
No. 1 Machinists' Bearing Scraper.  
Box Assorted Cotter Pins.  
File Handle.

List price.....\$8.00

S. A. E. Wrenches can be supplied if required

## TOOL SETS IN ROLLS

## 20-PIECE COMMERCIAL CAR KIT

Fig. 19C

This kit contains an assortment of extra heavy tools, particularly adapted for auto trucks. Tools are of highest quality and fully warranted.

The canvas roll is made of heavy brown water-proof duck with pocket for each tool; bound with leatherette binding and is furnished with heavy web strap and slip buckle.

Contains the following Tools:

- No. 23 Semi-finished 15° Angle Drop Forged Wrench.
- No. 27 Semi-finished 15° Angle Drop Forged Wrench.
- No. 31 Semi-finished 15° Angle Drop Forged Wrench.
- No. 34 Semi-finished 15° Angle Drop Forged Wrench.
- 10-inch Stillson Wood Handle Pipe Wrench.
- 11-inch Mottled Automobile Monkey Wrench with tire iron handle.
- 3-inch Electricians' Round Shank Screwdriver.
- 6-inch Electricians' Square Shank Screwdriver.
- 6-inch Offset Drop Forged Screwdriver.
- 9-inch Machinists' All-steel Screwdriver.
- 7-inch Flat File.
- 7-inch Round File.
- File Handle.
- 8-inch Mottled Adjustable Combination Pliers.
- ½-inch Solid Punch, half-polished, ¼-inch Point.
- ½-inch Cold Chisel, Natural Finish.
- ½-inch Cape Chisel, Natural Finish.
- ¾-inch Cotter Pin Extractor.
- 1 lb. Machinists' Ball Pein Hammer.
- Box Assorted Cotter Pins.

List price.....\$8.00

S. A. E. Wrenches can be supplied if required

Fig. 17C

## 30-PIECE GARAGE REPAIR KIT

Designed particularly for the garage mechanic. Contains a good assortment of necessary tools for garage use.

All tools guaranteed.

Case is made of heavy brown duck and has adjustable webbing tool straps.

Contains the following Tools:

- No. 25 Semi-finished 15° Angle Drop Forged Wrench.
- No. 725 Semi-finished 15° Angle Drop Forged Wrench.
- No. 27 Semi-finished 15° Angle Drop Forged Wrench.
- No. 731A Semi-finished 15° Angle Drop Forged Wrench.
- 9-inch Ebony Auto Wrench.
- 5-inch Nickel Plated Bicycle Wrench.
- 7½-inch Spark Plug Wrench.
- 4-inch Nickel Plated Pliers.
- 6-inch Mottled Adjustable Combination Pliers.
- 5-inch Square Shank Screwdriver.
- 6-inch Flat File.
- 3-inch Round File.
- 8-inch Half Round File.
- File Handle.
- ¾-inch Center Punch, half-polished.
- ¾-inch Prick Punch, half-polished.
- ¾-inch Solid Punch, ¾-inch Point, half-polished.
- ¾-inch Solid Punch, ¼-inch Point, half-polished.
- ¾-inch Drift Punch, ½-inch Point, half-polished.
- ¾-inch Cold Chisel, half-polished.
- 1½-inch Cold Chisel, half-polished.
- 1½-inch Cape Chisel, half-polished.
- ¾-inch Blk. Cotter Pin Extractor.
- 5-inch Offset Screwdriver.
- Sheet Emery Cloth.
- Bundle No. 15 Copper Wire.
- No. 1 Bearing Scraper.
- 10 oz. Machinists' Ball Pein Hammer.
- Spark Plug Brush.

List price.....\$8.50

S. A. E. Standard Wrenches will be furnished if desired

### STRUCTURAL WRENCHES

Straight Opening

The tang is for bringing bolt-holes into line and for insertion into convenient openings when wrench is not in use, preventing loss and keeping tool in sight.

The offset in handle provides for clearance of obstructions and safety for the hands of operator. Unfinished are milled only.

Semi-finished are milled, case-hardened all over; heads not ground.

No.	For U. S. Standard Nut Size Bolt	Opening	Extreme Length	Thickness Heads	Handle Offset	Price	
						Un-finished	Semi-finished

## CYLINDER HEAD WRENCH

Price, each.....\$0.28

Fig. 641

REVERSE BRAKE PEDAL TENSION SPRING  
WRENCH. Double End.

Price, each.....\$0.18

Fig. 623

## No. 623. CONNECTING ROD WRENCH.

Fits the No. 4 Connecting Rod. Saves much time.

Price, each.....\$0.30

Fig. 701

## W. R. S. FIRE PLUG SPANNER WRENCH

Drop forged spanner. Fits any size fire plug, or any style cap. Also arranged to fit any size coupling on fire hose. This wrench is used by the fire departments of practically every large city in the country.

Price, each.....\$1.50

## ALL STEEL TOOL KITS

Standard Kit

Standard Kit Open

Standard Kit with Tray

For Electricians, Mechanics, Railroad Men, Construction Men, Line Men, Meter Men, etc.

These Kits are made of prepared steel, but are no heavier than other bags and tool kits.

They are built to stand the wear and tear of hardest usage. Re-enforced throughout, fitted with brass side catches, strong two-tumbler Yale locks, steel leather-covered handles and riveted so that they cannot pull out. Protected by solid brass corner irons.

Finished in a three-coated baked enamel of brown or black, they present an appearance neat and attractive and look like leather traveling bags. Invisible hinges give smooth carrying surface.

Material, special construction and overlapping features make Kennedy Kits wearproof, waterproof and weatherproof. These Kits are also thief-proof, because they can be locked, chained and cannot be cut open.

Heavy material can be carried without buckling or changing shape of bag. Tray very handy for carrying drills, bits, screws, small parts, etc. Tray,  $1\frac{3}{4}$  inches deep.

Double formed, double seamed, electrically welded and re-enforced.

STANDARD KITS  
(Patents Pending)

	Length	Width	Height	Net Wt. Lbs.	Price Each
Style XT	14	7	9	$5\frac{1}{4}$	\$3.85
Style DDT	16	9	11	$6\frac{1}{4}$	4.10
Style DT	18	10	13	$7\frac{3}{8}$	4.35
Style ET	20	11	13	8	4.60
Style FT	22	11	13	$11\frac{1}{4}$	4.85

Furnished without tray if desired, at 35 cents less, each size.

## ELECTRICIANS' CASES

These cases are designed for and meet all the requirements of an electrician's tool kit. They have the necessary length, together with compactness and proper spacing for carrying the average equipment. They have a divided spacing at one end for blow-torch and ledge rests at top of grip for tray to carry drills, bits, small parts, etc., if desired. They have ample space at bottom for heavy tools, material, etc. In addition to leather handle, they are fitted with loops at each end for straps to pass under the case and over the shoulder for carrying heavy loads in this manner if desired. Furnished without tray at 35 cents less, each size.

	Length	Width	Height	Net Wt. Lbs.	Price Each
Style ENT	19	8	9	$7\frac{1}{4}$	\$4.00
Style EOT	21	8	9	$8\frac{1}{2}$	4.25
Style EHT	$24\frac{1}{2}$	6	9	$8\frac{1}{4}$	4.50

Electrician's Case  
with Tray

FOR COMPLETE LINE OF TOOLS FOR ABOVE CASES, SEE INDEX

## MASON BAGS

Made of one piece of heavy 18 oz. white duck extending around bottom, viz., a ONE-PIECE BAG. Bottom two thicknesses of No. 6 Duck with heavy straw-board filling. All sewing by LOCK STITCH machine so it cannot rip unless every stitch is cut. Each bag has lock and key. DOUBLE 12 gauge steel frame riveted to body of bag, which will outwear any manner of sewing. Sides are connected with genuine leather welt. Bottoms supplied with five steel studs.

Length	Depth	Width	With Pockets, per doz.	Without Pockets per doz.
16	15 ½	5 ½	\$16.80	\$16.20
18	15 ½	5 ½	18.00	17.40
20	15 ½	5 ½	19.20	18.60
22	15 ½	5 ½	21.60	21.00
24	17 ½	5 ½	22.20	21.60

## MECHANICS' TOOL SATCHELS

Same grade and make as Masons, has heavy grain leather on bottom and 5 inches on sides.

Length, inches	Width, inches	Depth	Per Dozen
16	4 ½	15	\$33.00
18	4 ½	15	36.00
20	4 ½	17	38.00
22	6 ½	17	42.00
24	6 ½	17	45.00

## MAIL BAGS

Body 18 oz. brown or white duck. Leather bottom and sides. Leather top fitted with strap and oblong grommets.

No.	Length, inches	Price each
1	16x24	\$5.00
2	18x24	5.75
3	20x26	6.50
4	20x30	7.00
5	22x36	8.00

## TOOL BAGS

Plumbers'

Made of carpet, with leather trimming 3 ½ inches wide on sides and bottom, bag being 16 inches by 25 inches in size. Two 1 ¼ inch leather straps, with suitable buckles, passing through leather loops. Heavy duck lining. Top bound for ¾ inch with leather.

Each ..... \$3.30

Steam Fitters'

Made of high-grade carpet, with leather trimming 3 ½ inches wide on bottom. Heavy leather hand-sewed gusset tapering from ½ inch at top to 4 inches at bottom. Leather binding ¾ inch around gusset and top. Two 1 inch leather straps, with suitable buckles, passing through leather loops. Shoulder strap 1 inch, with snaps for attaching and buckle for adjusting. Solid harness-leather handle. Bag 12 inches by 24 inches in size.

Each ..... \$3.75

No. 3 is so constructed that by removing top cap a new glass can be put in while under steam pressure.

### Fig. 447E. LUNKENHEIMER QUICK CLOSING WATER GAUGE

Part finished, three-rod, each:

$\frac{1}{2}$ -in. glass,  $\frac{1}{2}$ -in. pipe, \$10.50;  $\frac{5}{8}$ -in. glass,  $\frac{1}{2}$ -in. pipe, \$11.50;  $\frac{3}{4}$ -in. glass,  $\frac{3}{4}$ -in. pipe, \$13.50

All finished, three-rod, each:

$\frac{1}{2}$ -in. glass,  $\frac{1}{2}$ -in. pipe, \$13.00;  $\frac{5}{8}$ -in. glass,  $\frac{1}{2}$ -in. pipe, \$14.00;  $\frac{3}{4}$ -in. glass,  $\frac{3}{4}$ -in. pipe, \$16.50

## CHESTERTON'S GAUGE GLASS CUTTERS

Fig. 447F

Each ..... \$2.00

### THE CHICAGO GAUGE GLASS CUTTER

Fig. 447G

This is a high grade cutter of an old and standard type. The beam is graduated and the tool nickel plated. The cutter wheels are first quality—sharp and tough.

#### LIST PRICE

No. 1-C	each	\$ 0.60
No. 1-C	per doz.	5.00
No. 1-C	per gross	57.00

### THE WILKINS GAUGE GLASS CUTTER

Fig. 447H

Cuts easily and quickly any length from  $\frac{1}{4}$ -inch to 30 inches.

A slight pressure on thumb latch does the work.

The beam is accurately graduated in eighths of an inch up to 8 inches.

The cutter wheels are the best that can be made. Every one is ground sharp and tested.

The Tool is nickel plated. The handle has hard rubber finish.

Packed one in a box with one extra cutter wheel.

No. 0.	Cuts to 8-in. length, (for small tubes)	each	\$2.00
No. 1.	Cuts to 8-in. lengths (regular tubes)	each	2.00
No. 2.	Cuts to 18-in. lengths (regular tubes)	each	6.00
No. 3.	Cuts to 24-in. lengths (regular tubes)	each	8.00
No. 4.	Cuts to 30-in. lengths (regular tubes)	each	10.00
No. 5.	Cuts to 60 centimeters (Metric graduation)	each	10.00

Lengths not regular, charged the price of next longer tubes of same diameter.

## COMPOUND HIGH PRESSURE GAUGE GLASSES

Fig. 447J

For Highest Steam Pressures and Temperatures

Will not break when subjected to drafts or other sudden changes of temperature. Eliminates danger of scalding or other accidents, delays, etc., due to breaking glasses.

The frequent breaking of the common gauge glass is a source of not only annoyance but at times of great danger to the engineer or boiler attendant. This trouble is avoided in these Gauge Glasses by drawing two glass tubes, of different degrees of expansibility, one over the other. The whole is then fused into a solid tube. This construction gives the highest resistance to the sudden changes of temperature and the solvent action of hot water.

The glass inside the tube expands in proportion to the temperature of the steam or hot water, and the outside tubing contracts according to the temperature of the cold air.

These glasses are unbreakable from natural causes. They are not affected by a drop of water, a flake of snow, or a sudden draft of cold air coming in contact with the glass while it is hot. The great importance of this will be appreciated by every engineer. After a trial of this glass no man would take any chances by using any other.

The resistance offered by this glass to sudden changes of temperature is so great that a glass may be heated to 450° temperature Fahr., and will not break when dropped vertically into cold water.

7	5 x 1 3/4	5	100,000	20.00
8	4 1/2 x 1 3/4	4	10,000	17.50

If resetting attachment is wanted, add \$4.00 to above list prices.

## PRESSURE AND VACUUM GAUGES

The materials in all our Gauges are carefully selected and specially adapted to the service required of them. The workmanship is the same in all—the best only is employed.

These Gauges are not warranted for steam pressures unless equipped with a siphon of sufficient capacity to fill the spring with water and maintain the temperature of same below 110 degrees, Fahrenheit.

They are all accurately graduated by open mercury column and thoroughly inspected before leaving the Works. For greatest durability, a gauge should be graduated to double its working pressure. It is, therefore, important that you specify a graduation bearing this relation to the working pressure. Where the gauge is to be of the Compound Type for the indication of pressure and vacuum, it is necessary to specify the point to which the pressure scale is to be graduated. The vacuum scale is regularly graduated to 30 inches, but if specified will be graduated to equivalent pounds. Silvered dials are regularly furnished for all gauges, except ammonia gauges for which the dead white dial is standard.

Fig. S. P. Pressure Gauge

Fig. S. V. Vacuum Gauge

Service—For any pressure medium which will not deteriorate brass.

Construction—Made in Iron Case with Brass or Nickel Plated Ring and in Brass or Nickel Plated Deep or Shallow Case. The interior mechanism consists of a Single Spring and Standard Geared Movement. The connection is  $\frac{1}{8}$  inch male bottom on the  $2\frac{1}{2}$  inch size, and  $\frac{1}{4}$  inch male bottom on all larger sizes.

Service—For the indication of vacuum.

VACUUM GAUGE

Construction—Made in Iron Case with Brass or Nickel Plated Ring and in Brass or Nickel Plated Deep or Shallow Case. The interior mechanism consists of a Single Spring—in reversed position—and Standard Geared Movement. The connection is  $\frac{1}{8}$  inch male bottom on the  $2\frac{1}{2}$  inch size and  $\frac{1}{4}$  inch male bottom on all larger sizes.

Vacuum Gauges, unless otherwise specified, will always be furnished graduated to 30 inches. They can be graduated to equivalent in pounds instead of inches, if so stated when ordering.

Larger Sizes Furnished on Application

## DOUBLE SPRING PRESSURE GAUGES (Non-Freezing)

Fig. D. P. Pressure Gauge

Service—For any pressure medium which will not deteriorate brass, and where the service is too severe for the Single Spring Type.

Construction—Made in Iron Case with Brass or Nickel Plated Ring and in Brass or Nickel Plated Deep or Shallow Case. The interior mechanism consists of a Double Spring and Hard Geared Movement. In the 8 $\frac{1}{2}$  inch, 10 inch and 12 inch sizes the movement is mounted on the socket independently of gauge back. The connection is  $\frac{1}{4}$  inch male bottom.

When ordering do not fail to state: Size Dial and style of Gauge, also maximum pressure to which the Dial is to be graduated. Unless otherwise specified, Iron Case with Brass Ring will always be furnished. Above prices, 3 inches and larger include Cocks with each Gauge. On smaller sizes Cocks will be furnished at an extra price. No Steam Gauge warranted unless properly connected with Siphon.

Size Dial Inches	Iron Case with Brass Ring	Iron Case with N. P. Ring	Brass Case	Brass Case N. P. All Over	Standard Graduations of Dial Pressures
12	\$55.00	\$56.50	\$80.00	\$84.00	200 Other Graduations are 100-250 300-500

Larger Sizes Furnished on Application

## HYDRAULIC AND AMMONIA GAUGES

Fig. S. F. Hydraulic Gauge

## HYDRAULIC GAUGES

## With Steel Spring

**Fig. S. F., Service**—For the indication of all pressures from 1,000 to 20,000 pounds.

**Construction**—Made in Iron Case with Brass or Nickel Plated Ring and in Brass or Nickel Plated Shell Case. The interior mechanism consists of a Single Steel Spring and Standard Geared Movement. The connection is  $\frac{1}{2}$  inch male bottom, with wrench space for use in connecting the Gauge, and contains a check valve to eliminate shock due to the sudden release of pressure.

When ordering state the maximum pressure to which the Gauge is to be graduated. All Gauges, to insure the best results, should be graduated to double their working pressure. If a double scale, showing pounds pressure per square inch and tons on ram is required, state the diameter of ram and the number of tons to which the Gauge is to be graduated.

Size Dial Inches	Iron Case with Brass Ring	Iron Case with N. P. Ring	Brass Case	Brass Case N. P. all Over	Standard Graduations of Disc Pressures
8 $\frac{1}{2}$	\$70.00	\$70.75	\$80.00	\$82.50	2000
6 $\frac{3}{4}$	50.00	50.60	60.00	62.00	5000
6	35.00	35.50	40.00	41.50	1000-3000
5	30.00	30.50	35.00	36.00	10000
4 $\frac{1}{2}$	25.00	25.50	30.00	31.00	20000

No Cocks are furnished with these Gauges.

For Gauges with maximum hand, add \$5.00 to list prices.

## AMMONIA GAUGES

## Steel Spring

**For Ice and Refrigerating Machines**—For pressures up to 500 pounds.

**Fig. S. R., Service**—For Ammonia Gas or other pressure mediums which will deteriorate brass.

**Construction**—Made in Iron Case with Nickel Plated Ring. The interior mechanism consists of a Single Steel Spring and Standard Geared Movement heavily nickel plated. All other parts are made to withstand any corrosive action. The connection is  $\frac{1}{4}$  inch male bottom.

In ordering state whether a compound scale showing pressure and vacuum, or pressure only is required. Furnished with back connection when so ordered.

Size Dial Inches	Iron Case with N. P. Ring	Standard Graduation of Dial Pressures
8 $\frac{1}{2}$	\$45.75	150 lbs. and 30 inch vacuum
6 $\frac{3}{4}$	40.60	
6	35.50	300 lbs. and 30 inch vacuum
5 $\frac{1}{2}$	30.50	
5	30.50	
4 $\frac{1}{2}$	25.50	

Fig. S. R. Ammonia Gauge

## INDEPENDENT GEARED MOVEMENT GAUGE

(Steel Case)

## Hard Rubber Finish

With spring-mounted glass to prevent breakage in handling. For any pressure medium which will not deteriorate brass, and for vacuum, compound pressure and vacuum, and water altitude indication. For standard graduations see Pressure or Compound Pressure and Vacuum Lists.

This gauge is admirably adapted for use on hot water systems.

Vacuum Gauges graduated to 30 inches of vacuum. Altitude Gauges regularly furnished graduated to 70 feet.

Furnished in sizes 2  $\frac{1}{2}$  inch to 5 inch only.

Altitude style furnished in 4  $\frac{1}{2}$  inch size only.

While this style gauge is regularly furnished without a flange on back for fastening to board, we can furnish in this manner without extra charge.

Size Dial Inches	Pressure or Vacuum	Compound Pressure and Vacuum	Altitude
2 $\frac{1}{2}$	\$6.00	\$10.00	.....
3 $\frac{1}{2}$	7.00	10.00	.....
4 $\frac{1}{2}$	8.00	12.00	\$12.00
5	9.00	14.00	.....

Above prices (except 2  $\frac{1}{2}$  inch) include cock.

Fig. F. P. Independent Geared Movement Gauge

## COMPOUND AND COMBINATION PRESSURE AND VACUUM GAUGES

Fig. S. C. Compound Pressure and Vacuum Gauge

The standard graduation for all sizes Compound Pressure and Vacuum Gauges are 20, 60, 100 and 160 pounds pressure and 30 inches vacuum and for Combination Water Pressure Gauges, 100, 200 and 300 pounds pressure and equivalent in feet. When ordering do not fail to state size dial and style of Gauge, also the maximum pressure to which the dial is to be graduated.

**Fig. S. C.-S. W.—Service**—For any pressure medium which will not deteriorate brass and for the indication of vacuum.

**Construction**—Made in Iron Case with Brass or Nickel Plated Ring and in Brass or Nickel Plated Deep or Shallow Case. The interior mechanism consists of a Single Spring and Standard Geared Movement. The connection is  $\frac{1}{4}$  inch male bottom.

Fig. S. W. Combination Water Pressure Gauge

Size Dial Inches	Iron Case with Brass Ring	Iron Case with N. P. Ring	Brass Case	Brass Case Nickel Plated All Over
12	\$60.00	\$61.50	\$80.00	\$84.00

3 $\frac{1}{2}$	10.00	10.18	12.00	12.75

\*The 5 inch Combination Water Pressure Gauges take the same list prices as the  $4\frac{1}{2}$  inch Dial.

†The 3  $\frac{1}{2}$  inch size is not made in the Combination Water Pressure Gauge.

Fig. D. T. Double Spring Traction Engine Gauge

Fig. A. T. Auxiliary Spring Traction Engine Gauge

## TRACTION ENGINE GAUGES

**Service**—For Traction or Portable Engines or any other severe service. Standard graduation 300 lbs.

**Construction**—Made in Iron Case with Close Brass or Nickel Plated Ring. The interior mechanism consists of a Double Spring and Hard Geared Movement. The Ring is fitted with an asbestos packing ring which, bearing on the glass, excludes all moisture, dust and other foreign substances. The connection is  $\frac{1}{4}$  inch male bottom.

Can furnish  $\frac{1}{4}$  inch without extra charge.

Size Dial Inches	Iron Case with Brass Ring	Iron Case with Nickel Ring

4 $\frac{1}{2}$	10.00	10.20

THESE PRICES DO NOT INCLUDE COCKS

## TEST SETS, SIPHONS AND RECORDING GAUGES

### RECORDING GAUGE (With Cock)

American

The American Recording Gauge is designed to correctly record any variation of pressure during the day or night. The chart is rotated by a special clock movement, designed especially for this work. The new fountain pen, which we furnish with the recording gauges, is far superior to the Hod pen and other ink recording attachments used in other makes of recording gauges. A special Red Ink is furnished for this pen; the ordinary ink will not flow properly. This gauge can be furnished with high and low alarm at slight additional expense.

Size	Iron Case, N. P. Ring, each	Brass Case Shallow, each	Brass Case Deep, each
6 1/4 inch Dial .....	\$36.00	\$40.00	\$45.00
8 1/2 inch Dial .....	44.00	50.00	55.00
10 inch Dial .....	58.00	65.00	72.00
12 inch Dial .....	76.00	85.00	95.00

One year's supply of charts, one bottle of ink, and filler, are furnished with every instrument. Nickel plated gauges are furnished for same price as brass.

## INSPECTORS' TEST SET

This is a light, convenient and compact outfit especially suited for boiler inspectors. While this set is highly efficient and accurate, the total weight of the outfit in its velvet lined morocco case is but 8 pounds. Includes:

- 1 Nickel Plated Test Pump.
- 1 3-inch Nickel Plated Test Gauge, page 54, graduated to 300 pounds.
- 1 Nickel Plated Small Union Cock.
- 2 Nickel Plated Hexagon Couplings.
- 1 Nickel Plated Gauge Hand Jack.
- 1 Nickel Plated Gauge Hand-set.

Price per set, complete with case.....\$45.00

Fig. P. I. Coil Pipe Type

Fig. R. W. Double Radiator Type with Cock

### NO STEAM GAUGE SHOULD BE USED WITHOUT A SIPHON

#### DOUBLE RADIATOR SIPHON

Figs. R. N.-R. W. The interior construction is such as to deflect the steam against the bottom of the chamber, where it is condensed, thus preventing live steam entering the gauge spring. At the same time, a perfect siphoning action is secured, by which the gauge spring is drained of all water when the pressure is removed, thereby preventing freezing. The Coil Pipe Siphon is recommended for general service in connection with steam gauges except where it is necessary to drain itself entirely or where vibration and other conditions prevail, which make its use impractical. These Coil Pipe Siphons are furnished in either straight or angle form of iron, brass or brass nickel plated.

## OIL FILTERS

The primary object of the Nugent Oil Filter is to provide the best known filtering elements which are convenient, simple, effective, interchangeable, get-at-able, and removable without interfering with its continuous operation or with a single pipe, fitting, bolt or valve. Simply open a door and turn on the electric light.

There are no mysterious passages for the oil to travel through. There are no partitions to complicate the cleaning operation. Wool, waste, excelsior, bone black, charcoal or felts cannot stop up the needle point sight feed valves and oil cups.

We don't claim to refine the oil and make it better than new. We guarantee to take out that which has gotten into it, viz.: dirt, grit and water. By so doing the oil is saved and cleaned and may be used over and over again, effecting a saving of fully 80 per cent.

This operation does not interfere with the filtration process or a single pipe connection. Simply open the door, turn on the electric light and swing around the dirty set of bags which will stop automatically in front of the door and directly below the blank drip. It is not necessary to remove the bag from its respective ring for washing or cleaning. Wash bags in gasoline, benzine, kerosene or hot water.

Fig. 489—No. 3

No. 0 Filter is cylindrical the total height. Nos 1, 2, 3 Filters are rectangular like cut. Nos. 4, 5, 6 Filters have cylindrical top and rectangular base.

## NUGENT'S PATENT OILING DEVICES

Anti-Stand Dust Proof Crank Pin Center Oiling Device, designed for lubricating the crank pin of an engine or any other bearing surface where applicable, from a stationary sight feed oil cup without the aid of a supporting stand from the floor or other rigid object.

As applied, this device is made oil tight without the aid of stuffing-boxes or packing. Oil cup proper remains perfectly stationary when engine is running at full speed, and not a particle of dust or grit can enter with the oil.

## IN ORDERING

Send exact stroke of engine, which is twice the distance between centers of the shaft and crank pin.

If purchaser furnishes the bolt, send diameter of bolt for each stroke engine.  
If crank pin is drilled and you want us to furnish the bolt, send full particulars and data about the hole—that is, the size and kind of tap, including the number of threads to the inch, and if pin has a loose cap, send thickness of this cap at the center where the bolt goes through.  
If purchaser furnishes the oil cup, always mention size of tap for same.

(Inclusive) Stroke	Polished without Oil Cup	Size and Kind of Bolts We Ship With Each When No Other Size or Kind is Ordered Use No Smaller		Size of Oil Cup Recommended	
		Diameter	Threads to the Inch	Capacity Ounce	Size of Shank Pipe Tap

## List price without Oil Cups. Polished.

1 to 30 in. stroke, inclusive.....	\$21.00
31 to 48 in. stroke, inclusive.....	24.00
49 to 72 in. stroke, inclusive.....	27.00

If distance I is longer than 8 1/2 in. add \$2.00 to list price for supports which will be necessary.

## IN ORDERING

Send stroke; pipe tap at E, H and KK and distances A, B, C, D.  
Order by Fig. No. 178.

Fig. 27 illustrates Telescopic Double Eccentric Oiling Device.

## List Price without Oil Cups, polished.

For Single Eccentric, all throws.....	\$21.00
For Double Eccentric, all throws.....	36.00

## IN ORDERING

Set Eccentrics on top center and give distances K, L, M, also N. O and the throw for each eccentric. Pipe tap at I and J. Order by Fig. No. 173 for single and No. 27 for double Eccentrics.

If L or L+M exceeds 15 inches add \$2.50 to the list price for supports which will be necessary.

Order by Fig. No. 27.

Fig. 179 illustrates Telescopic Center Crank Pin Oiling Device.

## List Price without Oil Cup. Polished.

1 to 11 in. stroke, inclusive.....	\$22.00
12 to 18 in. stroke, inclusive.....	24.00

## IN ORDERING

Send stroke; pipe tap at A and C, and distances D, E, F and G.  
Order by Fig. No. 179.

## PENBERTHY AUTOMATIC INJECTORS

A perfect restarting automatic machine. If the current of water is broken by any cause, the injector will pick up the water and re-establish the current to the boiler without the least attention. Every machine is carefully tested, and will work on the following points: Start low, 20 to 22 pounds steam on 3-foot lift. Work high, 165 to 170 pounds steam on 3-foot lift. Lift water, 20 to 24 feet on 60 to 80 pounds steam. Will deliver water to boiler at 160 to 212 degrees, according to temperature of feed water and steam pressure. Water 200 to 212 degrees can always be delivered at nearly all pressures over 50 pounds by throttling suction valve and delivering minimum capacity. It is advisable in many cases to install an injector large enough so that the supply can be cut down and attain this result, thereby saving fuel. By placing a short piece of pipe having a stopcock, in the overflow, and closing after the injector has started, water 8 to 10 degrees hotter can be handled, but the injector is rendered non-automatic while the stopcock is closed.

Extra parts furnished for injectors numbered above 21000 without returning it to factory. In ordering parts do not fail to give serial letter and number, which will be found on top of overflow. In referring to or ordering parts, designate them by letter or name as per above.

FOR OTHER STYLES OF INJECTORS, SEE INDEX

## INJECTORS

### METROPOLITAN AUTOMATIC INJECTOR

#### MODEL X

The Metropolitan Injector Model X was designed to meet the demand for an injector which is specially adapted for the severe service encountered on traction and portable engines and boilers and which will interchange without alteration of piping, with other makes used on such services. The Model X is automatic or self-starting after interruption of steam or feed water supply. The bronze compositions of the parts, which are identical with those in other models of the Metropolitan injector, make the Model X particularly well adapted for bad water and other severe conditions met in this service. The workmanship, as well as the materials throughout are of the highest grade. All the wearing parts are extra heavy and the distribution of metals in body or casing gives the greatest possible strength. The cost of maintenance of the Model X is lower than any other injector of this type.

**Working Range**—The Metropolitan Injector Model X when working with feed water at 70 degrees Fahrenheit on lift not over two feet, will work from 20 to 160 pounds steam pressure; with feed water at 70 degrees Fahrenheit and 20 feet lift, it will work from 55 to 100 pounds steam pressure; with feed water at 120 degrees Fahrenheit and two feet lift it will work from 30 to 85 pounds steam pressure.

Every Metropolitan Injector is thoroughly inspected and tested under actual working conditions before leaving the factory and is fully guaranteed.

A flat strainer is furnished with each Model X Injector.

### PENBERTHY "SAFEGUARD" WATER GAUGES "SAFEGUARD"

The Penberthy "Safeguard" Automatic Water Gauge is a high grade square body bronze gauge, designed especially for protection against personal injuries and damage to properties caused by the breaking of gauge glasses, thereby releasing scalding water from boiler. The construction makes it impossible for the automatic features to operate except when glass breaks. The automatic valves are brass balls, one contained in body of lower arm, the other in shank of upper arm. When glass breaks, the lower valve closes absolutely tight, while the upper valve is made to leak to equalize pressure in glass when new glass is put in, thereby causing balls to drop from their seats by gravity.

## EJECTORS AND JET PUMPS

## H-D EJECTORS AND JET PUMPS

Made with Independent Couplings and Tubes

Fig. 473A

These Ejectors are used for lifting and conveying water and other liquids from one level to another.

The H-D Ejector will lift 24 feet. When it is desired to raise the liquid to a greater distance, place the Ejector near the liquid and elevate it. With a steam pressure of 65 pounds it will elevate to 50 to 60 feet, and with 100 pounds steam up to 70 to 80 feet.

\* Sizes up to and including number 5 are all brass. Number 6 and all larger sizes are iron bodies. The jets of ejectors of all sizes are brass and of a special good wearing composition.

## CELLAR DRAINER

A water pressure ejector of high capacity, made of best bronze metal, automatically operated by a copper float controlled, quick opening and closing valve. It cannot leak, and allows the ejector to give its greatest efficiency by working to full capacity. The float arms are slotted where they connect to the valve lever, preventing the ejector from operating until water has raised float to highest point. As the water is ejected, the arms travel down the length of these slots before the weight of the float affects the valve. No leather washers to dry up and leak.

Fig. 473C

There is no chance of corrosion or of the exterior parts becoming clogged up by deposits of slime, dirt or sediment. A special strainer prevents any foreign particles from coming in contact with the interior parts. A foot valve is also provided inside the strainer, which closes the instant the drainer ceases operation, holding all the water in the pipes all primed for starting instantly at the next filling of the pump, and also preventing flooding of the cellar if for any reason the water pressure is insufficient to operate the ejector.

No.	Pipe Conn. inches		Dimensions Over All, in.		*Capacity gal. per Hour	Price each Automatic

## PENBERTHY "XL-96" IMPROVED EJECTORS

Lifts 22 to 25 Feet. Elevates 25 to 100 Feet, 30 to 100 Pounds Pressure

## REPAIR PARTS

The lifting and elevating power is so combined in the "XL-96" Ejector as to make it unquestionably the best device of its kind. The principle and power contained in so small, handy and economical an instrument, continually suggests new uses, which often demand that the tubes of the ejector be proportioned particularly for the service. We have perfected and can furnish special ejectors singularly efficient in the work for which they are designed.

No.	Steam Con- nection inches	Suction and Dis- charge inches	Capacity, Gallons per Hour						Price, Each

## MADISON—KIPP VALVELESS FORCE FEED LUBRICATORS

Fig. 651. Sight Feed Type Model 50

Fig. 652. Showing Arrangement of the Multiple Feeds in the Larger Sizes  
This is Model 50, Double Feed

Fig. 653. Blind Feed Type

These Lubricators can be furnished in either the sight feed type or the blind feed type. They are built rugged and substantial for rough and severe service, and all working parts are under cover running in oil. There are no joints or packing to work loose and leak oil. The tank is made of sheet steel and the design is neat and attractive.

These Lubricators are built on the celebrated KIPP no-valve principle. Over five hundred thousand in daily use in all kinds of service and in all temperatures, are proof positive of their accuracy and reliability. They start and stop with the engine and feed the same always as adjusted. The only care or attention necessary is to fill with oil when needed.

We recommend these Lubricators for oiling valves, bearings and cylinders on gas and steam engines of all kinds including hoisting engines, steam shovels, steam dredges, electric light engines, excavating engines, coal dock engines, traction engines, steam pumps, air compressors, etc.

No. of Feeds	Capacity Pints	Shipping Weights	Price Sight Feed Type	Price Blind Feed Type
1	5	20	\$10.00	\$8.00
2	5 1/2	23	15.00	....

The blind feed type is made up only in the single feed. We can furnish the sight feed type up to 12 feeds.

Write for prices on larger sizes.

FOR OTHER STYLES OF LUBRICATORS, SEE INDEX

## DETROIT IMPROVED STANDARD LUBRICATOR

### DOUBLE CONNECTION

The Double Connection Improved Standard Lubricator is used on all kinds of reciprocating steam engines, steam pumps, etc., and is a lubricator for general service.

The cored heating passage, cast integral with the body, is filled with steam at all times the lubricator is in operation, so that the oil is maintained at an even temperature and there is no fluctuation in the rate of feed. The heat keeps the oil in a thoroughly liquid condition and the lubricator is well fitted for feeding heavy oils.

The support arm is in two parts. The part containing the globe valve is first screwed into the steam pipe and the lubricator is then coupled to it. This makes attachment easy and, on account of the globe valve, the lubricator can be removed at any time for any purpose without letting down steam.

The sight feed and gauge arms are screwed into the body and can be easily replaced should they be damaged by rough usage. In this way the more delicate parts can be renewed and the lubricator made good as new at very little expense.

In the  $\frac{1}{2}$  pint and  $\frac{1}{4}$  pint lubricators where an additional opening might tend to weaken the body, the filler and upper gauge arm have been combined in such a way as to make it unnecessary to eliminate the gauge on these small sizes. This filler secures easy filling by providing an ample vent. Through this filler a stream of very heavy oil may be poured rapidly without annoyance, waste, and delay resulting from bubbling.

For use on all kinds of steam engines, steam pumps, etc.  
Installed with both connections between the boiler and the throttle.

Finished in polished brass or nickel plated.

## DETROIT IMPROVED LUBRICATOR

## Single Connection

They are used on all kinds of reciprocating steam engines, steam pumps, etc., where a double connection lubricator cannot be installed because the arrangement of equipment does not give enough room for the installation of a double connection lubricator. Wherever possible, however, we advise the use of a double connection lubricator in preference to the single connection type because any lubricator with two connections to the steam pipe has better condensation and consequently better feeding qualities.

In the  $\frac{1}{2}$  and  $\frac{1}{4}$  pint lubricators, where an additional opening might tend to weaken the body, the filler and upper gauge arm have been combined in such a way as to make it unnecessary to eliminate the gauge on these small sizes. This filler secures easy filling by providing an ample vent. Through it a stream of even very heavy oil may be poured rapidly, without annoyance, waste and delay resulting from bubbling.

The  $\frac{1}{4}$  pint size has no gauge glass.

For use on all kinds of steam engines, steam pumps, etc., where conditions do not permit the installation of a double connection lubricator.

Connected to the steam pipe either above or below the throttle or into the steam chest direct.

Finished in polished brass or nickel plated.

## DETROIT IMPROVED ZERO LUBRICATORS

### Double Connection

Detroit Zero Lubricators of various kinds are intended for out-of-door use and are designed to feed freely in all temperatures. A cored heating chamber, through which steam passes inside the body of the lubricator, keeps the oil at an even, warm temperature so that the rate of feed does not fluctuate from chilling of the oil.

These lubricators are made for rough service and have metal handles.

With the exception of the Double Connection Zero, all the Zero Lubricators have large condensers which give ample condensation for very fast feeding, if required, and eliminate the necessity of a long condensing pipe so that economy of room is obtained.

For different kinds of service, Detroit Zero Lubricators are made in a number of different styles, which are shown on the following pages.

For use in outdoor service, particularly in places subject to low temperatures, such as on traction engines, portable engines and other steam engines and steam pumps exposed to the cold.

Installed with both connections between the boiler and the throttle.

Finished with rough body and polished trimmings in either brass or nickel.

Fig. 205A

## DETROIT "500" LUBRICATOR

The Detroit "500" Lubricator is made for all types of gas engines and air compressors. It is easily operated and gives constant lubrication to the cylinder under every condition of service.

The lubricator is made very substantially so as to withstand excessive pressures, vibration and rough usage. It has bull's-eye sight feed and gauge glasses which are easily kept tight and will not break. The filler plug and valves are provided with metal handles.

The lubricator is connected direct to the cylinder, using, if desired, a short piece of pipe and elbow. No separate valve is used as the valve "B" in the support post cuts off the lubricator from the cylinder when it is desired to repack the glasses, clean the lubricator, etc.

The valve "C" (see cut below) controls the admission of oil to the oil passages and should be used to operate the lubricator, making it unnecessary to change the adjustment of valve "A," which need not be disturbed after once being properly regulated.

For use with gas engines and air compressors.

Attached to the air cylinder or installed on the air line. For service where the pressure varies, the "500" Lubricator, with ball check, is furnished. For service where the pressure is constant, as on the air line, the "500A" Lubricator, without any ball check, is furnished. For service where the pressure is from 250 to 500 pounds, the "500X" is furnished. For service where the pressure exceeds 500 pounds the "500XX" is furnished.

FOR LUBRICATING AND MACHINE OILS SEE INDEX

## DETROIT "KID" LUBRICATORS

For use on small steam engines and small steam pumps.

Fig. 24 Single Connection Detroit Kid Lubricator is for installation where conditions do not permit the use of the Double Connection Kid also shown on this page. It can be connected to the steam pipe or into the steam chest direct by using an elbow and short vertical pipe.

Made in  $\frac{1}{8}$  pint size only. Finished in polished brass or nickel plated. Pipe thread on support arm,  $\frac{1}{4}$  inch.

List price each, brass.....\$10.00

Fig. 25. Double Connection

Fig. 25 Double Connection Kid Lubricator has a sight feed, enabling the operator to tell at all times exactly how much oil is being fed. This advantage makes the Kid preferable to the ordinary plain cylinder lubricator or steam chest oiler often used for the same class of service for which the Kid is designed. Made in  $\frac{1}{8}$  pint size only.

Finished in polished brass or nickel plated. Pipe thread on support arm,  $\frac{1}{4}$  inch.

List price each, brass.....\$12.00

FOR OIL CUP GLASSES, AND OTHER STYLES OF OIL AND GREASE CUPS, SEE INDEX

## EMPRESS OIL CUPS

Style A

Style B

Style N

## Style A

Low setting dustproof cup. For use where space is limited. Edge of cap overhangs and permits filling from oil can spout.

## Style B

Opened by raising cap, which can be turned to be filled from any direction. Cap closes automatically, cannot jar open and is dustproof.

## Style N

Can be used in horizontal or oblique position. Cap is fitted with spring friction fit allowing opening by turning one direction only. Dustproof. Cap will not jar open.

Top Oil Cup

## PLAIN SCREW TOP OIL CUP

This type of oiler is made from drawn brass or steel, and is practically indestructible and yet very light in weight.

No.	Diam.	Hgt. Overall	Pipe Th'd.	Opt. Th'd.	Pol. Brass Price per 100	Steel Price per 100
0	$\frac{3}{4}$	1 $\frac{1}{2}$	$\frac{1}{8}$	$\frac{1}{4}$	\$30.00	\$20.00
2	1	2	$\frac{1}{4}$	$\frac{1}{8}$	40.00	30.00
3	1 $\frac{1}{4}$	2 $\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{8}$	60.00	50.00
4	1 $\frac{1}{2}$	2 $\frac{1}{4}$	$\frac{1}{4}$	$\frac{1}{8}$	90.00	65.00

WE ALWAYS FURNISH REGULAR PIPE THREAD UNLESS OPTIONAL THREAD IS SPECIFIED

## Figs. 404-406 "EVERLASTING" BRAZED STEEL BENCH OILER

With brazed steel bottoms and heavy drop forged body. The bottom will never lose its elasticity. Guaranteed for five years' service.

It is brazed or soldered with hard solder, and is the only oiler than can be placed on any fire to heat the oil in cold weather without melting the bottom out. It has a steel-spring bottom, brazed to drop forged steel body, making it the most durable oiler on the market. It will not corrode or choke up the nozzle with verdigris. The nozzle is made of steel, case-hardened at the point, and has a large opening at body, making it easy to fill.

Spout and body polished. Extra heavy steel nozzle. Solid cut-brass bushing. Nozzle, 6 inch and upwards furnished bent unless otherwise ordered. All lengths interchangeable.

## Figs. 501-503 "INDESTRUCTIBLE" POLISHED STEEL OILERS

This Oiler is made with a heavy steel body. The bottom is made of tempered spring steel.

The can is so constructed that no braze or solder is used on the outside, so if it becomes somewhat heated in melting oil, there is nothing on the outside that will melt.

## CANNON AND PUMP OILERS

### AUTOMOBILE PUMP OILERS

#### COPPERIZED STEEL

Fig. 800

Made of 20 gauge cold rolled steel, heavily copper plated and lacquered. The body is drawn seamless in one piece. Oiler is designed for automobiles, stationary engines, power boats, etc. It is equipped with a special pump and the delivery of oil can be regulated by the distance of the stroke of the plunger. Oiler is equipped with a strainer to prevent clogging of the valves and spouts. Order by figure number.

### CANNON OILERS

The Cannon Oilier has a complete force pump attachment without any packing nuts. Both the valves are separate from the plunger, which is packed with the best leather, which, working in oil, will last a long time and can be easily replaced if it ever wears out.

This oilier fills a long-felt want for an oil can in which the oil is entirely controlled by the operator in whatever position the can may be held. In this can is combined speed, convenience and economy. For locomotives, traction engines, automobiles, mills, machine shops, and any machinery that needs lubrication the Cannon Oilier will be found indispensable.

**GALVANIZED**

No. 440. 4 quart, diameter of top, 9 3/4 inches; 11 inches high; diameter outlet, 1 1/4 inches.....each \$1.00  
No. 880. 8 quart, diameter of top, 12 inches; 12 1/2 inches high; diameter outlet, 1 1/4 inches.....each 1.25

Made of very heavy steel and galvanized; they will stand any amount of hard service. The spouts are sealed to the body (not soldered) so that they cannot break off.

The spouts and the lower part of the bodies are beaded so that they will not become air bound in any size opening. They are fitted with hoops to hold the chamols and also have fine brass strainers.

No. 80. 8 quart, diam. of top, 12 inches; 12 1/2 inches high; diam. outlet, 1 1/4 inch; coppered.....each 1.25

**A VERY IMPORTANT FEATURE**

The lower part of the body is beaded or fluted for use in tanks with large openings, so that if the filler opening in the tank is larger than the spout and the lower part of the body of the funnel goes down into the tank opening, the beads form an air space and prevent the funnel from becoming air bound.

The spout being large and fluted they will not become air bound in the ordinary size tank opening and also on account of the large space for holding the chamols the gasoline can be poured through these funnels very fast.

**Fig. 120 SHUT-OFF FUNNEL**  
A Perfect Gasoline Auto Funnel  
Patented

Has a movable hoop for holding the chamols, a fine brass strainer, side handle for convenience and an automatic indestructible ball valve shut-off as a necessity. Simply lift the funnel from the filling hole in the tank or can and no more gasoline can run through the spout.

Remember that not only when the tank is full that lifting the funnel stops the flow of any more gasoline running through the spout, but another very important feature is that the funnel can be lifted from the tank at any time without waiting for the funnel to empty itself.

## MEASURES AND FUNNELS

### GALVANIZED GARAGE MEASURE

The Ideal 5 Gallon Garage Measure

Extra Heavy

Warranted Not to Leak

Fig. 15

The most practical 5 gallon measure made; can be filled from a tank, hose or faucet without spattering and can be carried to auto and lifted up on running board to tank without spilling a drop.

It is made of very heavy steel and heavily galvanized, is tested and warranted not to leak or rust. Opening in end of spout, 1½ inches. Opening in top for filling, 4½ inches.

Galvanized with Blue Stripes

No. 15. 5 gal. capacity, 11½ inch diameter by 17 inches high . . . . . each \$2.00

Galvanized and Painted Red

No. 150. 5 gal., same as No. 15, only painted red . . . . . each \$2.00

### NON-EVAPORATING GASOLINE MEASURE

The Perfect Five Gallon Garage Measure

Fig. 25

The pouring lip and filler opening are one. The filler opening has a cover plug which is so arranged that by simply turning it one-half a turn the pouring lip is shut off, so that any gasoline left in the measure can remain in the can safely and without loss from evaporation, thereby being a storage can as well as a measure.

It is made of extra heavy steel and galvanized after it is made.

11½ inches diameter by 18 inches high, over all. 4 inches diameter, filling opening.

Galvanized with Blue Bands

No. 25. 5 gal. capacity . . . . . each \$2.50

Galvanized and Painted Red

No. 250. 5 gal., same as No. 25, only painted red . . . . . each \$2.50

Fig. 56

Fig. 210

Fig. 200

Fig. 010

Fig. 4000

### Fig. 56 LEVIATHAN GARAGE FUNNEL

Six Gallon Capacity—Extra Heavy

Has seamless brass spout threaded in brass base on bottom thus being removable, facilitating shipment and preventing breakage. Complete with chamolins strainer.

Having had numerous calls for an extra large heavy Funnel of a capacity sufficient to take a five gallon can of gasoline at a single pouring (without having to wait for the contents to run through the chamolins strainer) the above Funnel was designed.

It has a deep, large hoop for the chamolins, which stretches it tight across the bottom, the full diameter of the Funnel giving the maximum straining capacity and insuring a very rapid flow. This chamolins is supported by a wire rack rest to prevent sagging.

Galvanized, with Ball

No.	Capacity gals.	Diam. ins.	Height ins.	Length of Spout ins.	Diam. Spout ins.	Each
56	6	14½	10½	5½	1½	\$4.75

Approximate Shipping Weight

1 box contains ¼ doz. No. 56. Weighs 53 lbs.

### Fig. 210 COMBINATION MEASURE AND FUNNEL WITH AUTOMATIC SHUT-OFF ATTACHMENT

Simple in Construction, Positive in Action and Everlasting in Quality

Positively Prevents Overflowing the Oil Tank and Spilling Oil Over the Engine and Other Parts

It is not only a most practical measure, combined with a funnel for convenience in pouring, but has in the spout a brass ball valve, (ground off tight) to shut off the flow of the oil instantly (in a very simple manner) at the convenience of the user.

This measure prevents over-flowing the oil tank, a very useful and necessary feature. Will save its cost in a single season.

Heavily Copper Plated

No.	Cap. quarts	Diam. Bottom, inches	Total Height ins.	Diam. Spout, ins.	Each
21	1	4½	7½	7/16	\$1.00
220	2	5½	9½	½	1.25
240	4	6½	12½	11/16	1.75

### Fig. 200 COMBINATION MEASURE AND FUNNEL

In a Class by Itself

Note the pouring lip with a center channel, the funnel on opposite side of pouring lip; also the spout of the funnel points slightly upward, so that when measure is set down all oil runs back into measure.

IMPORTANT

These measures are of correct capacity and are marked to comply with the laws of the various States and have been approved by the sealers of various States.

Size	Diam. Bottom	Total Height	Diam. Spout	Polished Tin		Heavy Copper Plated		Copper Plated Brass Strainers

### Fig. 4000 TWO-IN-ONE OFFSET GASOLINE FUNNEL

With fine brass strainer, movable hoop to hold chamolins, spout easily removed, thus forming a regular Funnel.

Heavily copper plated.

No. 4000. 4 quart, diameter top 9½ inches, diameter outlet 1¼ inches, 10 inch offset spout like cut . . . . . each \$2.00

No. 8000. 8 quart, diameter top 12 inches, diameter outlet 1½ inches, 10 inch offset spout like cut . . . . . each 2.25

No. 12000. 8 quart, diameter top 12 inches, diameter outlet 1½ inches, like cut only spout offset (15 inches instead of 10 inches) . . . . . each 2.50

## PROTECTION (APPROVED) SAFETY CANS

## The Cans that Cannot Explode

These cans are designed for storing and properly handling of all volatile explosive liquids, such as gasoline, naphtha, benzine, turpentine, ammonia, alcohol, kerosene, etc.

The principle governing the non-explosive feature is well known. The can at its opening is fitted with a brass tube, projecting within, through which the liquid flows and the gas, under excessive pressure, can escape.

The tube is provided with openings covered with brass wire cloth of close mesh, which does not hinder the flow of the liquid, but through which fire and flame cannot pass. Should the vapor or contents of the can become ignited, the tube prevents the spread of the flame within, confining it to the opening, thereby making explosion impossible.

The opening of the can is provided with an automatic valve, which makes it airtight, preventing evaporation of the liquid. Should the can be exposed to extreme heat, generating excessive gas pressure, the valve opens, permitting the gas to escape, and closes with reduced pressure.

The safety device of the can is constructed entirely of brass to prevent corrosion and coloring of the liquid and is riveted to the top of the can to secure absolute safety. The body of the can, from the one pint up to the two gallon size, is constructed of 26 gauge leaded plate. For the five and ten gallon cans, 24 gauge leaded plate is used. The best materials are used throughout to secure durability and strength. To fill the can, insert the funnel into the spout.

Bottles are drawn from one piece of metal. Inspected and labeled "Approved by the Underwriters' Laboratories, Inc., Chicago, under the direction of the National Board of Fire Underwriters."

## "EMPIRE" BUCKETS

As per lists below, the smaller sizes are made of Tin and the larger of smooth, refined Steel; the ends are double seamed to the body by special machinery, which enables us to produce a bucket which for strength and smoothness of finish has no superior.

They are guarded with band iron firmly riveted to the body, making the bucket light but firm; the shape is especially adapted to discharge readily. All Buckets nest in packing, which enables us to secure low freight rates.

### EMPIRE TIN MILL BUCKETS

Width Projection, In.	Price	Width Projection, In.	Price
2 x 2	\$0.10	4 x 3 1/2	\$0.13
2 1/2 x 2 1/2	.10	4 1/2 x 3 1/2	.14

15	7	416	.70
16	7	448	.76
18	7	480	.82
19	7	512	.87

We also handle Minneapolis V, Rialto, Malleable and extra heavy steel buckets. Prices quoted on application

FOR ELEVATOR BOLTS, SEE INDEX

## CONVEYING MACHINERY

## SPIRAL STEEL CONVEYOR

Our Sectional Flight Conveyor is interchangeable with those of all other manufacture. The prices below include the necessary curved iron lining, one coupling with bolts and one hanger with each standard length, except when pieces of Conveyor shorter than standard lengths are ordered, when no fittings will be furnished unless specified and then an extra charge will be made.

In ordering Conveyor always be sure to specify whether RIGHT or LEFT-HAND is required.

Diameter Ins.	Per Foot		Gauge of Flight	Stand'd Length Feet	Inside Diameter Pipe, Ins.	Revol- utions PerMin	Capacity PerHrs. Bu.

COUNTER BOX ENDS FOR  
CONVEYOR

This device is designed to provide a cast iron end box and to furnish bearings necessary for the mitre gear counter shaft all self-contained. This is more economical than using independent bearings.

The gears can be changed from one side to the other, so the motion of the conveyor can be reversed.

Diameter Conveyor Inches	Diameter Driving End Inches	Diameter Countershaft Inches	Price
4	1	1	\$ 9.00

16	3	3	70.00
18	3	3	85.00

CAST IRON ENDS FOR  
CONVEYOR BOXES

These ends take the place of a hanger or bearing. Makes a more rigid bearing for driving ends than a hanger or outside pillow block, and costs less, when labor and material for foundation for outside bearing is considered. The bearing is babbitted and furnished with oil tube.

Size of Conveyor Inches	Size of Drive End Inches	DIMENSIONS—INCHES						Price

## CAST IRON DISCHARGE END BOX

When it is desired to discharge material through end of conveyor box, the use of end casting shown is recommended. It adds more rigidity to conveyor than an ordinary hanger. The bearing is babbitted and provided with oil tube.

This style is used for both wood and steel boxes.

Size of Conveyor Inches	Size of Shaft Inches	Price	Size of Conveyor Inches	Size of Shaft Inches	Price
4	1	\$1.75	12	2	\$ 7.00
6	1 1/2	2.75	12	2 1/2	8.00

9	1 1/2	4.00	14	2 1/2	10.00
9	2	4.50	16	3	11.50
10	1 1/2	5.00	16	3	12.50
10	2	5.50	18	3	15.00

## SUPERIOR WROUGHT IRON BOOT

These boots are made of heavy sheet iron sides and cast iron frames, and have extra supports or feet that hold the weight of the elevator legs. An essential feature that is found in no other boot. It has side tighteners, a shield to protect bearings from dust, also oil tube for oiling. It is provided with clean-out doors either on side or end, as desired. The pulleys are well balanced and all bearings babbitted.

In ordering, give length and projection of buckets. Made with either pulleys or sprocket wheels.

Bucket	Belt	Pulley	Price	Bucket	Belt	Pulley	Price
4 1/2	5	10x6	\$20.00	9	10	16x11	\$30.00

## CONVEYING MACHINERY

## FLEXIBLE GRAIN SPOUTS FOR TRIMMING CARS

These spouts are used to load cars without shoveling, and will work where there is little fall from bin. No. 1 has swivel joint, Nos. 2 and 3 have chain connections. Will turn any angle. No. 1 spout sent unless otherwise ordered.

Each Section adds  $8\frac{1}{2}$  inches to the length of the Spout

Special sizes made to order, any size length and any size hopper. In ordering, give size of wooden spout to which you wish the spout fitted.

## BUFFALO OR WAREHOUSE BUCKETS

These Buckets are made of cold rolled steel, and reinforced with  $1\frac{1}{2}$ -inch No. 12 steel bands. We furnish these buckets with either malleable "T" brace or wrought iron "Z" brace as desired.

Buckets 14 inches and smaller furnished with one brace, and buckets 16 inches and larger furnished with two braces, when desired, at advanced prices.

"MOSHER" BAG  
HOLDERS

This Holder is a great success. It is the only bag holder adapted to all sizes of bags, from a 48 pound flour sack to a 6 bushel gunny bag. One man can take off and put on from 15 to 20 bags a minute. Does not tear the bag. It is

well made; malleable iron jaws wrought iron pipe standards, steel springs and only weighs 20 pounds.

Each ..... \$5.00

## WOOD SPLIT PULLEYS

## GENERAL CONSTRUCTION

**Rim**—The rims are built of Southern hardwood, thoroughly seasoned. The lumber is dressed to a uniform thickness, cut in short segments of equal length and width, then each is bedded in glue and securely nailed.

**Single arm construction**, adopted on sizes 10 inches to 34 inches in diameter.

**Arms**—The arm stock is selected hardwood. The arms are composed of series of boards dressed exactly to the same thickness as the rim segments, placed edgewise to the strain and built up in alternate layers of the rim, nailed and glued into same, thereby becoming an integral part thereof. This assures great strength.

**Double arm construction**, adopted on sizes 36 inches to 80 inches in diameter.

**Single Cap Block Pulley**—This pulley is made in three sections as illustrated by the center view, and the clamping bolts are fixed securely in the half pulley. The two sections are clamped to the shaft as indicated by the view to the left.

## NON-LISTED SIZES

For a pulley whose diameter is expressed in fractions of an inch, or in inches not listed, use the list of the next larger diameter listed. For a pulley whose face width is expressed in fractions of an inch, or in inches not listed, use the list of the next wider face listed. If face exceeds widest size listed, extend the list at the same rate per inch as that existing between last two sizes listed.

## LIST PRICES FOR SPECIALS AND EXTRAS ON WOOD SPLIT PULLEYS

### SPECIAL BORES

Our standard bores are as follows:

3 inch diameter.....	1½ inch
4 inch diameter.....	2 inch
5, 6 and 7 inch diameter....	2½ inch
8 inch and above.....	3½ inch

We will bore pulleys to the limit set forth in the table below without extra charge:

3 inch diam.....	2 inch bore
4 inch diam.....	2½ inch bore
5 inch diam.....	3 inch bore
6 to 41 inch diam.....	3½ inch bore
42 to 47 inch diam.....	4 inch bore
48 to 72 inch diam.....	4½ inch bore
73 to 96 inch diam.....	6 inch bore
97 to 120 inch diam.....	7½ inch bore

When pulleys are bored to fit shaft smaller than standard without bushing, or larger than above limits but less than indicated in table below, add 10 per cent.

### Extra Price for Large Bores

	Add to List					
	15%	20%	25%	35%	50%	65%
Under	3%	4½	5½			
12" Diam.	4"	5"	6"			
12" to	4½	4½	6½	7½		
18" Diam.	4½	6"	7½	10"		
19" to	5½	6½	7½	9½	12½	15½

23" to	7½	8½	10½	12½	15½	18½
26" Diam.	8"	10"	12"	15"	18"	21"
27" to	9½	10½	12½	15½	18½	21½
30" Diam.	10"	12½	15"	18"	21"	25"

For Bores in excess of above limits net prices to be made on application.

### KEYS

Our Bar Compression Key is made of plate steel, milled on one side to fit the keyway in the shaft and broad enough to extend back between the arms of the pulley far enough so the compression bolts pass through same, precluding the possibility of ever working loose.

### Price List for Keyseating Wood Pulleys and for Keys

Size of Shaft		Width of Face of Pulley					
		12 in. or less	13 in. to 16 in.	17 in. to 20 in.	21 in. to 24 in.

	Price of key,	1.45	1.60	1.75	2.00		

### TIGHT AND LOOSE PULLEYS

For the tight pulley we use our standard pulley with wood bushing.

In the loose pulley we use an iron bushing. The only extra charge over a regular pulley is for this bushing, which is listed below.

### PLAIN SOLID LOOSE PULLEY BUSHINGS

A grease or oil cup should be ordered with every plain bushing. See index.

For split or special bushings, prices upon application.

### PRICE LIST

Out-side Diam.	Bore in.	Length						
		3"	4"	5"	6"	8"	10"	12"

	3							
Width of Belt (Face of Pulley)		2"	3"	4"	5"	6"	8"	10"

Intermediate sizes take next higher list.

### STEP CONES

### FLANGE PULLEYS

Unless the order specifies otherwise, we furnish our regular pulleys and they are clamped to the shaft separately in the proper position. No extra charge is made for these.

When so specified we furnish split cones with the steps built together; or solid cones, equipped with flanges and set screws. To determine list price of these treat each step as a separate pulley, combine the list and add 50 per cent.

To find the list price of a flange pulley, add to the list price of a regular pulley, 20 per cent for single flange, 25 per cent for double flange, 30 per cent for triple flange.

There is no additional charge for crating.

## AMERICAN ALL-WROUGHT STEEL SPLIT PULLEYS

## DESIGN

The "American" Steel Split Pulley is designed so as to give maximum strength with minimum weight of material.

It consists of a rim of one-ply steel made exceedingly stiff by interior flanges to which the arms are securely attached. The heavy rolled beads on the outer edges strengthen the face materially at these points. Flat "A" braced arms (edge on) give perfect rigidity and least air resistance. Grooved air escape improves belt contact. Pulleys of small diameters have holes in the face through which a screw-driver may be inserted to tighten the hub clamp bolts, these bolts being made with slotted heads for this purpose.

SOME ADVANTAGES OF THE  
"AMERICAN"

Quick and easy installation by means of interchangeable bushings, made to fit different sizes of shafts. No need to strip the shaft to put on an "American."

Best and most efficient belt contact—the grooved face.

"Americans" fan the least air.

"Americans" grip the shaft tightest.

Keyway or set-screw is unnecessary in almost every case.

## GUARANTEE

"American" Pulleys are guaranteed to form double belt service under any condition, not requiring a special pulley.

## INTERCHANGEABLE BUSHINGS

One Bushing free with each pulley. Additional Bushings at low rates.

For Prices on Steel Split Pulleys see Next Page

## DOUBLE ARM

## IN ORDERING PULLEYS, REMEMBER:—

That if you should specify diameter, face, bore, and whether Crown or Straight face.  
 That if pulleys are ordered without either Crown or Straight face being specified, they will be supplied Crown.  
 That for non-shifting belts, Crown faces are the best.  
 That for tight and loose pulleys, Crown faces are the best.  
 That for shifting belts, Straight faces should be used.  
 That pulleys can be bushed down to any size of shaft.

PRICES UP TO 120 INCH DIAMETER ON APPLICATION

# IRON PULLEYS

## MACHINE MOULDED

Bored, turned and balanced, with set screws or key seats.

## COLD ROLLED SHAFTING EXTRAS

**Shafting—Extras on Rounds, Sizes Smaller than  $\frac{3}{4}$  inch.** List prices on sizes smaller than  $\frac{3}{4}$  inch apply on screw stock quality in random mill lengths. Shafting quality and any grade other than screw stock, or screw stock cut to accurate lengths with lathe or saw cut ends—15c per 100 lbs. net.

## Boxing and Burlapping.

Boxing (minimum 50c) .....	\$0.20 per 100 lbs.
Burlapping (minimum 25c), full length.....	.15 per 100 lbs.
Burlapping of ends only .....	.05 per 100 lbs.

**Piston Rod Steel.** Uniformity to size and carefully selected surface finish, 50c per 100 lbs. net.

## Extras for Accuracy.

For accuracy from exact size to .0015 inch under.....	\$0.25 per 100 lbs. net
For accuracy from exact size to .001 inch under.....	.50 per 100 lbs. net
For accuracy within .0005 inch either way of a specified size or from exact size to .001 inch over.....	1.00 per 100 lbs. net

**Quantity Differentials.** All specifications for less than 1000 lbs. of a size will be subject to the following extras, the total weight of a size ordered to determine the extra, regardless of length and regardless of the exact quantity actually shipped:

500 to 999 lbs. ....	\$0.05 per 100 lbs. net
100 to 499 lbs. ....	.10 per 100 lbs. net
Less than 100 lbs. ....	.20 per 100 lbs. net

## Extras for Long and Short Lengths.

	Rounds	Squares
3 inch to $5\frac{1}{8}$ inch .....	\$1.00 per 100 lbs. net	\$1.00 per 100 lbs. net
6 inch to $11\frac{1}{8}$ inch .....	.50 per 100 lbs. net	.50 per 100 lbs. net
12 inch to $23\frac{1}{8}$ inch .....	.25 per 100 lbs. net	.50 per 100 lbs. net
24 inch to $59\frac{1}{8}$ inch .....	.10 per 100 lbs. net	.25 per 100 lbs. net

	Hexagons	Flats
3 inch to $5\frac{1}{8}$ inch .....	\$1.00 per 100 lbs. net	\$2.00 per 100 lbs. net
6 inch to $11\frac{1}{8}$ inch .....	.50 per 100 lbs. net	1.00 per 100 lbs. net
12 inch to $23\frac{1}{8}$ inch .....	.25 per 100 lbs. net	.50 per 100 lbs. net
24 inch to $59\frac{1}{8}$ inch .....	.10 per 100 lbs. net	.25 per 100 lbs. net

Lengths longer than 24 ft. and less than 30 ft. ....	\$0.50 per 100 lbs. net
30 ft. and less than 35 ft. ....	1.00 per 100 lbs. net
35 ft. and less than 40 ft. ....	1.50 per 100 lbs. net
40 ft. and less than 45 ft. ....	2.00 per 100 lbs. net
45 ft. and longer.....	2.50 per 100 lbs. net

Extras for long lengths apply on Rounds, Squares, Hexagons and Flats.

## PRICE LIST FOR KEY-SEATING SHAFTS

Diameter of Shaft inches	Full Length per foot	For Couplings per End Milled Ends	Middle Splines			
			First Foot or Less Milled Ends	Second Foot and Over per foot	Extra for each Drilled End	Extra for each Squared End

FOR SHAFTING, WOOD AND STEEL PULLEYS, SEE INDEX

## THE MASTER FRICTION

CLUTCH  
PULLEYComplete with  
Lever Yoke.

If clutch runs  
over 350 R. P. M.  
we recommend  
bushing same.  
This is extra.  
Give speed.

This clutch is very powerful owing to its double wedge-shaped friction surfaces that grip like a vise. Size for size it transmits almost twice the power of any other make.

It may be run at high speeds if desired. Some of the sizes running as high as 1200 R. P. M. successfully.

For an all round, high grade, serviceable clutch pulley there is nothing like it on the market.

It has no projecting parts flying around to endanger life and always releases when disengaged.

THE MASTER BAND  
CLUTCH PULLEYComplete with  
Lever Yoke.

This clutch is extremely simple and easy to adjust and requires very little space on the shaft. It is a good clutch pulley for line shaft and countershaft work.

# PATENT UNIVERSAL DOUBLE BRACED RING OILING, BALL AND SOCKET HANGERS

Bearings Babbitted and Reamed

This Cast Iron Hanger is designed upon lines so as to distribute the metal in order that there is ample sufficiency of iron where it is most required and where the greatest strain takes place.

The Hanger Yoke is cast separate and is interchangeable with any drop of the same size shaft. This applies also to Universal Post Hangers, Pillow Blocks and Bracket Hangers.

The Bolts supporting the Yoke are integral with the Frame proper; thus strengthening the Hanger at one of the most important points that carry the load of the line shaft.

The Bearing is of the well known Ring Oiling Type, the superiority of which method of lubrication has been demonstrated by years of actual service.

The Reservoir when properly filled will amply lubricate the shaft from six to eight months without refilling.

The Old Way.  
Note the Checks  
from the Heart

## CARPENTER'S QUARTER-SAWED ROCK MAPLE ROLLERS

The Carpenter  
Way. No Hearts  
in These Rollers  
to Check.

### THE TREATMENT AND CARE OF MAPLE ROLLERS

Checking in rollers is caused by surface of the roller drying out faster than the inside and the outer rim of fast drying wood shrinking and having to accommodate itself to the still damp and larger core. No matter how many years a maple square has aged in stock there is always some moisture present inside it and as soon as it is turned into a roller it starts drying out further. Checking can only be eliminated by taking great care of the rollers and seeing that they dry out evenly throughout which is almost impossible.

Heart wood is not of the same tensile strength, fibre, density or weight as the select sap wood surrounding it and cannot be made to dry out at the same rate as the sap wood.

The elimination of the heart in a roller practically prevents checking if the rollers lie unused awhile. The average man however, doesn't order his rollers until they are badly needed and they go into service at once. In these cases the rollers, as soon as they are received, and before being used should be given a coat of oil (linseed preferably but any heavy oil will do) and the ends painted to prevent the surface drying too fast. This is in a large measure helped by keeping them out of the sun in-so far as is possible.

A heart roller weighs just as much as a Carpenter roller. Carpenter rollers last more than twice as long as others and the freight saving alone will just about pay the difference in cost.

We ask at least one week's time on each order for these rollers as they are never carried in stock but turned to suit the individual requirements of the order as it comes in, and then oiled, painted and inspected twice before leaving.

Larger sizes take special list.

Intermediate sizes take next higher list.

In ordering always specify diameter and length.

### SPECIAL MAPLE ROLLERS AND SQUARES

We can supply rollers of 10 inches to 14 inches in diameter if desired and large maple squares or heavy planking with no hearts in lengths up to 16 feet.

We also supply rollers with iron bands on the ends and with steel shafts through and projecting from each end for Mine and Conveyor rollers, etc., etc. Write for prices.

### REGULAR HARD MAPLE HEART ROLLERS

## TRACK AND BALLAST JACKS

Fig. 6

Fig. 1

Fig. 116-117-118

Fig. 101

## No. 6 Simplex Double Acting Ballast and Track Jack

For heavy track, ballast and crossing work. Massive construction is combined with proven material. Simplex mechanism, combined with careful design, resulting in increased efficiency, has led many of the leading railroads to adopt this Jack.

## SPECIFICATIONS

Standard.....	Malleable Iron	Capacity, tons.....	15
Lever Socket.....	Crucible Steel	Lift, inches.....	18½
Rack Bar.....	Drop Forging	Height, inches.....	31
Pawls.....	Drop Forging	Weight, with pole, lbs.....	96
List price.....		\$32.00	

## No. 1 Simplex Double Acting Track Jack

Built for "above-the-average," really efficient duty on track, ballast or construction work. Keen attention to every detail, combined with Simplex mechanism and the resultant increased efficiency, has led to the adoption of this Jack by many of the largest railroads. All parts are heavier than average requirements might justify, but the Jack never fails on any demand.

## Nos. 116, 117 and 118 Simplex Surfacing Ballast and Track Jacks

Single Acting—Operating on the Down Stroke of the Lever, or Tripping at any Position.

A trio of track Jacks that have no equals for efficiency and simple design. The upper pawls, with rack engaging teeth at the bottom, swing as pendulums from the frames. The lower pawls which fulcrum in sockets in the frames, engage the rack bar teeth or may be pulled backward to engage the upper pawls in recesses provided to trip the load. In this way a tooth by tooth lowering device or a quick trip to low position is effected.

Each bearing is a heavy trunnion, cast integral with the lever socket, and rotates in a hardened steel, closed end, lubricant-retaining bushing.

No. 116. A Jack of small height, low lift and little weight, that is easily and quickly carried. Combining a tripping or tooth-by-tooth lowering device, it has power and speed for all surfacing work.

No. 117. The most simple, yet efficient design of track Jack built, and a great favorite for track work.

No. 118. For ballast work particularly, this is the ideal Jack. Of great height and lift. It easily raises the track clear of all ballast during construction, even though the ground, because of its softness, may allow the base to sink. As is often necessary, the track may be lowered gradually, or dropped all the way. This is accomplished by operating the two pawls. The upper one, with rack engaging tooth at the bottom, swings as a pendulum from the frame. The lower operates like those in the Nos. 116 and 117.

## No. 101 Simplex Track Jack

Double Acting—Operating on the Up and Down Stroke of the Lever, or Tripping at any Position.

This Jack meets the demand for a compact doubleacting Track Jack. It reduces the height of all former Jacks of equal lift, thereby reducing the weight accordingly. Yet because of its massive, heavy construction, it is the master for all work in connection with the heaviest rails.

## SIMPLEX GEARED JACKS

Single Acting—Operating on the Down Stroke of the Lever

These Jacks are designed for easily handling loaded refrigerator and railroad cars, locomotives, or heavier industrial work. Cast integral with the frame is a gear case which houses a heavy drop forged pinion and ratchet wheel, both of which are heat treated and hardened. Engaging snugly with this pinion is a heavy rack, which is forged from chrome nickel steel. The pinion rotates on bronze bushings. The pawls, which are operated by the crucible steel socket, engage the teeth of the ratchet wheel so that it raises or lowers the rack bar on each stroke of the lever. These pawls are made of chrome nickel steel in the No. 25 Jack, and chrome vanadium steel in the No. 35. Under all circumstances the pawls are locked so that the load cannot be dropped. Carrying handles are provided upon each side. The raising and lowering movement of the rack bar is governed by the indicator upon the side of the Jack.

Each bearing is a heavy trunnion, cast integral with the socket and rotates in a hardened steel, closed end, lubricant-retaining bushing. Grease cups are provided where necessary.

## SIMPLEX CAR, INDUSTRIAL AND BRIDGE JACKS

Single Acting—Operating on the Down Stroke of the Lever.

The Simplex mechanism locks the working parts in every position—a load can never drop. Each bearing is a heavy trunnion, cast integral with the lever socket, and rotates in a hardened steel, closed end, lubricant-retaining bushing.

The design and construction embody the most minute details to increase long life and service. Even an apron is provided over the socket opening to keep dirt from internal parts. Direction of operation is governed by the reversing indicator on the side.

No. 2. Simplex Industrial and Car Jack. Designed for use on interurban cars, for contractors and industrial service, as well as for track work. Heavy loads are easily handled, because of the high efficiency.

No. 4. Simplex Bridge or Car Jack. Designed for bridge and heavy construction work. Powerful, rapid, highly efficient and is built for rough, abusive service. The extra heavy base and reinforced standard, with high carbon-forged rack bar, provide a positive guarantee of a long, efficient life. Smaller details of design, such as an apron over the socket opening to keep dirt from internal parts, are carefully watched.

No. 19. Simplex Car, Industrial and Bridge Jack. The specifications, construction and power of this Jack have produced the basis of economy in car and bridge repairing

## JACKS

Fig. 315

Fig. 50

Fig. 51

Fig. 55

## No. 315 SIMPLEX ORDNANCE AND EMERGENCY JACK

Single Acting—Operating on the down stroke of the lever.

In addition to the recessed chain cap, chain and pivoting standard of the No. 310 Emergency Jack, there is an auxiliary detachable shoe which fits snugly in the recessed chain cap. This shoe swings free upon its axis in the cap and operates at any angle within a radius of 180°, irrespective of the angle at which the Jack is inclined. It adds another lifting point and gives the Jack a greater range of lift. A load may be handled at any point, on cap, shoe or bottom foot, or, if occasion demands, the shoe may be detached or used in conjunction with the chain.

The base is large and massive, especially designed for field work. It may be anchored at any position by means of the stake hole and two recesses at the rear.

This Jack is used for every kind of emergency or industrial purpose, or for Ordnance Departments, to lift guns that are mired or to support them in action; on board ship for use in narrow shaft alleys or confined spaces or for stiffening and strengthening bulkheads.

## STANDARD EQUIPMENT

Five-foot heavy Chain with Grab Hook attached.

Five-foot Steel Lever Bar—Pinch Bar construction.

Auxiliary detachable shoe.

## Nos. 50, 51 AND 55 SIMPLEX INDUSTRIAL JACKS

Single Acting—Operating on the down stroke of the lever bar.

Jacks Nos. 50 and 51 are especially designed for every kind of industrial service; for light cars, mining, factory and agricultural service.

Number 55 Jack is quickly adjusted to a load at any height. It is ideal for any kind of truck, industrial, mining or agricultural work. The adjustable shoe can be raised or lowered on the H-beam rack, locking firmly at any position in the circular recesses provided.

Operation is highly efficient and minimum work is necessary for the heaviest loads. Each bearing is a heavy trunnion, forged integral with the lever socket, and rotates in a hardened steel, closed end lubricant-retaining bushing.

Simplex mechanism locks the working parts in every position—a load can never be dropped.

The reversing device on the side, when revolved a half circle, changes direction of operation. The socket when not in use folds into a vertical position, thereby minimizing storage space.

In numbers 50 and 51 the steel lever pole is of pinch bar design—a handy tool for any work.

## SIMPLEX JACKS

## No. 310. SIMPLEX EMERGENCY JACK

**Single Acting**—Operating on the Down Stroke of the Lever

This Jack is really a combination of a Crane and a Jack. It pivots on its own base from 30° to 90° to the horizontal and lifts, lowers, pushes or pulls at any angle.

The base of the standard rests, with a machine fit, upon two curved shoulders which project upward from, and form a part of the base. Two studs hold it in position. The base, therefore, takes all thrust. A double socket is provided by means of which the lever pole is always in a convenient position—no matter what the angle of the Jack may be.

The Cap is recessed to firmly hold the links of a chain when they are dropped in position. The cap, at its "V" notched side, quickly engages wooden beams, or boxes, or because of its corrugated surface, maintains a firm contact against metal surfaces when pushing at any angle. The Jack can never slip because of the heavy calks at the bottom of the base. The bearings are massive trunnions, forged integral with the lever socket and rotate in hardened steel closed end, lubricant-retaining bushings.

Direction of operation is governed by the reversing lever on the side.

## No. 318. SIMPLEX POLE JACK

**Single Acting**—Operating on the Down Stroke of the Lever, or Tripping at any Position

This Jack has all the features of the No. 310 so far as pivoting on its base, recessed chain cap, double socket and general construction is concerned. Added to this is the feature of tripping the

load from any point back to low position. It has far greater height and lift, however, to enable its being used in many places in which the No. 310 or 315 would not be of sufficient lift. In pulling a telephone pole, or for sawing off a decayed base, it is possible to get hold high and lift fully two feet. If this is insufficient lift, the pole is held, the cap quickly tripped to low position and a new hold taken. Only a fraction of the time required by any other method is necessary. The big saving of labor and expense usually affects an entire pole pulling crew.

There are numerous other demands for this Jack on railroads, in construction and industrial fields.

## STANDARD EQUIPMENT

- 8 foot Hand-forged Chain, with pear-shaped link
- 5 foot Steel Lever or Pinch Bar.
- 2 feet of 10 inch, 25 lb. I Beam Base Support.

## AUTOMOBILE JACKS

Fig. 36

Fig. 41

Fig. 42

Fig. 43

## NO. 36 SIMPLEX AUTOMOBILE JACK

This little Jack is carefully designed and constructed throughout of high quality, homogeneous, malleable castings. The middle shoe, which is integral with the rack bar, supplies an extra lifting point—useful in many awkward positions. The rack bar teeth and all working parts are machined.

Every Simplex Automobile or Truck Jack, with equipment, is neatly and securely packed in a heavy corrugated board box. The attractive label plainly shows the contents. This insures a clean stock, quickly locates any size of Jack, economizes storage space and avoids further packing for reshipment.

A 12 inch Hard Maple Lever Bar is Furnished with Jack

## NOS. 41, 42, 43, SIMPLEX AUTOMOBILE AND INDUSTRIAL JACKS

Double Acting—Operating on the up and down stroke of the lever bar.

These Jacks are miniatures of the larger Simplex Jacks. The same care in construction and design is present, with the addition of a valuable asset—a detachable shoe. This shoe, fitting snugly in the cap, swings in a radius of 180° and is available in every position. A load may be handled at any point because of the foot, the shoe and the cap—three carrying points.

The arc of travel of the steel lever bar is small, hence the load never obstructs movement of the hand. These Jacks are so highly efficient that the effort expended is about the same as that on the very best geared Jack.

Direction of operation is regulated by the lever on the side.

It would not be possible to build an Auto Jack of better material than is used in any of the above Jacks.

## STONE AND MACHINERY JACKS

### BEST STEEL FORGINGS, ALL GEARS CUT

#### WOOD FRAME STONE JACKS

For use in stone and marble yards, stone quarries, foundries and machine shops. Also for moving and erecting machinery.

An iron housing protects the rack, pinion and gears. Nothing to get out of order. The rack, pinion and gears are forged from steel blanks and the teeth are cut.

Can be operated at any angle, base being fitted with prongs to prevent slipping.

All jacks are furnished with swivel head foot lift and crank.

We can furnish with any desired attachments as illustrated. Unless specified we will ship attachment as shown in complete Jack.

## WINCHES—DRUMS

SAFETY WORM  
GEAR WINCH

Fig. 6318

The worm gear enables the Winch to hold the load at any point when the handle is released.

Especially adapted for raising and lowering electric lights, chandeliers, doors, partitions, etc.

Capacity ..... 500 lbs.  
Weight ..... 56 lbs.  
Size of Drum ..... 5½x6 inches  
Price ..... \$9.00

If a heavier Winch is required, we have in the same style:

No. 6319. Size of drum, 5½x6 inches, capacity 750 lbs. Price ..... \$12.00

No. 6317. Size of drum, 8x10 inches, capacity, 1200 lbs. Price ..... 15.00

Fig. 6318  
Worm GearFig. 6240  
Peerless

## PEERLESS HAND POWER WINCH

Fig. 6240

This is a sturdy little hand power Winch, low in price but sure on the lift. An improved pawl holds the load at any point. The Winch is well made in every respect and is extremely handy.

Capacity ..... 1000 lbs.  
Drum ..... 6 inch diameter, 5½ inches long  
Flanges ..... 2½ inches wide  
Weight ..... 30 lbs.  
Price ..... \$10.65

## SMALL WINCH, NOT GEARED

Fig. 2544

This Winch is made in two sizes, 3½x12 inches and 14 inches. Equipped with band brake mounted to steel frame and equipped with clamps so that it can be clamped to 6x6 or smaller. This Winch is all right where light loads are to be hoisted. Can be used with cable or ½ to ¾ inch rope.

Price, including clamps and brake ..... \$6.00

## SMALL SINGLE DRUM GEARED WINCH

Fig. 2545

This Winch is made in one size. The drum is 4x8 inches, large gear 12 inches, pinion 3 inches. Both gears are made out of malleable. The main frame is made in one piece and is also of malleable iron, which makes it very compact and strong, and very light to get around with. The weight of the Winch complete with handles is 65 lbs.

This Winch has a drum capacity of 300 feet of ½ inch cable.

Price ..... \$9.00

Including band brake.

If clamps to clamp to 6x6 post are desired, add \$0.50.

Fig. 2544

Fig. 2545

## DRUMS FOR HAND POWERS

Hand Powers are always furnished with Straight Drums, unless otherwise specified.

Fig. 195A. Straight

## CARPENTER MATERIAL ELEVATOR

The first cost of an elevator cuts but a small figure when divided up on a few contracts. The time occupied in putting up a building is decreased to about one-third, enabling the contractor to erect a greater number of buildings. For rapid handling of building material such as brick and mortar, these elevators are indispensable to the contractor.

The head or top frame which supports the two sheave wheels is strongly bolted and well ironed off to stand the wear and tear on the job.

The two cages are large and well braced with platforms made of sound well seasoned maple, protected with strap iron in parts subject to wear.

The side timbers of the elevator proper are 2 by 6 inch pine, with a 1½ inch square maple strip fastened for the elevator guide. The side timber sections are joined together at their ends with long dowel pins, made of maple, which makes a very rigid joint.

The top sheave wheels are placed on an angle so that the cable down to the lower sheave runs along the side of the maple strip guide, instead of over the top of the guide which avoids the cutting off of the guides at certain floor heights.

This elevator equipment is easily set up and taken apart, and is shipped knocked down.

A blue print is furnished with each shipment to aid workmen in setting up.

## SPECIFICATIONS OF THE CARPENTER DOUBLE CAGE MATERIAL ELEVATOR

Platforms—maple, reinforced at ends by angle iron. Size of Platforms—3 feet, 8 inches by 6 feet.  
Overhead Frame—Norway pine. Diameter of Overhead Sheaves—24 inches.  
Guides—1½ x 1½ inches clear maple. Diameter of Bottom Sheaves—16 inches.  
Side Timbers for Guides—2x6 inch Norway pine. Size of Cable Recommended—¾ inch.  
Blue Print furnished on application, showing complete installation, in connection with Carpenter Hoist.

## THE CARPENTER DOUBLE CAGE MATERIAL ELEVATOR

Carpenter complete 50 foot Material Elevator with two cages, two 24 inch top sheave wheels, double bottom 16-inch sheave wheels, overhead frame work, 200 feet side timber guides, all ready to set up as per blue print furnished.....	\$193.33
Carpenter complete Material Elevator with two cages, two 24-inch top sheave wheels, double bottom 16-inch sheave wheels, overhead frame work, all ready to set up as per blue print furnished (without side timber guides).....	141.33
2—24 inch Sheave Wheels complete with babbitted bearing boxes and shafts which are keyed to the sheaves.....	37.33
2—16 inch Bottom Sheave Wheels mounted on stand.....	20.00

## CARPENTER GASOLINE HOIST

### SPECIFICATIONS OF THE CARPENTER GASOLINE ENGINE DRIVEN DOUBLE ACTING BUILDERS' HOIST

End Frame—heavy ribbed cast iron.  
Skid—4 inch channel iron, reinforced with 4x6 inch yellow pine.  
Size of Clutch Shafts—1½ inch diameter.  
Size of Drum Shaft—2 inches diameter.  
Drum Holds—500 feet of ½ inch cable.  
Maximum Safe Load on Drum Shaft—1500 pounds.

Overall Length of Outfit—6 feet, 6 inches.  
Overall Width of Outfit with Engine—30 inches.  
Overall Width of Outfit with Motor—36 inches.  
Blue Print furnished on application.  
Winch-Head can be mounted in place of Hoist Sheave Wheel.

### THE CARPENTER GASOLINE ENGINE DRIVEN BUILDERS' HOIST

Carpenter No. 1 gasoline engine driven Builders' Hoist with Carpenter four horsepower, four cycle water hopper cooled gasoline engine mounted.....	\$541.66
Carpenter No. 2 gasoline engine driven Builders' Hoist with Carpenter six horsepower, four cycle water hopper cooled gasoline engine mounted.....	641.66
Hoist without power, ready for mounting your own engine or motor. (Motor or engine pinion furnished).....	308.33
High-Tension friction drive magneto in connection with dry cells and coil.....	40.00
Low-Tension gear-driven "Dixie" magneto (no dry cells or coil).....	37.33

### THE CARPENTER MOTOR DRIVEN BUILDERS' HOIST

Same Hoist, Direct Connected to Electric Motor  
SPECIFICATIONS

End Frame—heavy ribbed cast iron.  
Skid—4 inch channel iron, reinforced with 4x6 inch yellow pine.  
Size of Clutch Shafts—1½ inches diameter.  
Size of Drum Shaft—2 inches diameter.  
Drum Holds—500 feet ½ inch cable.

Maximum Safe Load on Drum Shaft—1500 pounds.  
Overall Length of Outfit—6 feet, 6 inches.  
Overall Width of Outfit—36 inches.  
Winch-Head can be mounted in place of Hoist Sheave Wheel.

When installing an Electric Motor in any of our outfits special attention must be given to the voltage on direct current service and the phase and voltage when mounting either single phase, two phase or three phase motor, with the correct cycle, speed, etc.

Blue Print Furnished on Application

Hoist with alternating current, single phase, two or three phase, or direct current motor, with starting box, wired and installed, complete ready to connect on the job

## CARPENTER No. 4 CONTRACTORS' AND BUILDERS' HOIST

Fig. 2441

Our No. 4 Single Drum **Reversible** Hoist shown here, is a time, labor and money saver. It is especially adapted to contractors' and builders' requirements, but may be used for a large variety of other purposes where the load is not over 1,000 to 1,200 lbs., with single line, on the direct lift.

The Drum, the Sheave and the Winch Head are reversible and may be used independently one of the other. The Winch Head is for "Snubbing" or quick, short work and general utility. The Sheave is for double platform elevator work and the Drum for heavy single line lifting, or for use with block and tackle.

Forward and reverse motion is obtained by a movement of the operating lever which engages or disengages the friction clutches.

A powerful Band Brake is provided which is controlled by a tread lever in convenient reach of the operator.

A Safety Ratchet and Pawl are provided for holding the load at a desired height, and guards are provided for all gears.

The Hoist may be driven by belt from any convenient power or may be mounted on a base or truck and direct connected by gearing or sprocket and chain to a gasoline engine or electric motor. Gear or sprocket will be furnished in place of drive pulley when desired.

It occupies but little space, and being comparatively light weight, it is easily moved and can be used in cramped quarters.

**Specifications**—Drum, 5 inches diameter, 13 inches between flanges, and will hold 500 feet of  $\frac{1}{2}$  inch wire cable. Sheave, 10 inches diameter. Capacity to lift 1000 lbs. 100 feet per minute with single line direct lift. Floor space, 27x42 inches. Weight, 475 lbs. Power recommended, 5 H. P. or more. Drive pulley, 16x5 inches. Speed, 360 R. P. M.

In addition to the Style No. 4 shown above, we can supply three other styles. Special descriptive circular will be sent on request.

Style No. 1, Single Drum Hoist. List.....	\$60.00
Style No. 2, "Handy Man" Hay Hoist. List.....	80.00
Style No. 3, Double Drum Hoist. List.....	110.00
Style No. 4, Described above. List.....	80.00

FOR OTHER STYLES OF HOISTS, SEE INDEX

## DOUBLE FRICTION-DRUM BELT HOIST

FIG. 122

Above we illustrate our Double Friction Drum Belt Hoist. It has two drums instead of one; both drums are mounted on a substantial bed plate, the one drum being lower than the other, permitting the necessary play for the ropes.

The Drums are the double V friction type, bronze bushed, and equipped with ratchets, pawls and foot brakes, and may be operated independently or together. The driving pulley may be replaced by a gear or sprocket, if desirable to connect directly to a gas or oil engine or drive from a motor.

The gears are cut, and the pinion is steel.

We can also furnish this Hoist in single drum.

## SPECIFICATIONS

	No.	200	201	202	203	204	205

Fig. 202 1/2

**Pulley**—Furnished 14 inch diameter by 4 inch face.  
**Speed**—Pulley running 400 R. P. M. will hoist 75 feet per minute on first coil of cable wound on drum.  
**Operation**—Each drum has the hand and foot levers shown in the cut. The hand lever when pulled forward engages frictions for hoisting, and pulled back applies the brake. The foot brake can be used in connection with the hand lever, or independent of it.

## SINGLE DRUM REVERSIBLE

### Type 204

Our Hoist No. 204 Single Drum Reversible has a capacity of 2000 pounds, and is designed to meet the demand of contractors and builders, or in fact anywhere where pulling, hauling or lifting both ways is desired, hauling cars back and forth.

### SPECIFICATIONS

**Capacity**—2000 pounds.  
**Drums**—Ample wire rope capacity, 4 inch diameter, 17 inches between flanges. Flanges 15 inch diameter. Hole in each end of drum for fastening cable.  
**Pulley**—Furnished 16 inch diameter by 5 inch face. This is regular size.  
**Speed**—Pulley running 338 R. P. M. will hoist 75 feet per minute on first coil of cable wound on drum.  
**Operation**—Hand lever when brought forward raises the load and if pulled back reverses the load.  
**Brake Lever**—Can be set and locked and the load held indefinitely.  
**Adjustment**—Is provided to take up all wear on brake, bearings and frictions.  
**Weight**—On short skids, 700 pounds.  
**Floor Space**—34 inches by 42 inches.

## PORTABLE FRICTION HOISTS

### DOUBLE DRUM

#### Type 202 1/2

**Hoist No. 202 1/2** Double Drum of 1000 pounds capacity, is especially designed to hoist in two places, or in different parts of the building, raising material with one machine.

Each drum can be operated separately from the other. When the hand levers are central, your hook or load will drop. If loaded you can drop it as slowly or quickly as desired by using hand or foot brake or both. Or if hauling wagons, cars, etc., up inclines, by holding the lever central the cable can be quickly and easily pulled back.

This machine is of the same construction and design as the No. 202 Single Drum, but needs only one man and one engine to drive it, and does the work of two hoists. It enables you to keep more than one gang or floor in building under construction supplied with material, and permits work to progress with dispatch.

### SPECIFICATIONS

**Capacity**—1000 pounds.  
**Drums**—Ample wire rope capacity, 2 inch diameter and 18 inches between flanges. Flanges 12 inch diameter. Oil cups and hole for fastening wire rope furnished.  
**Adjustment**—Is provided to take up all wear on brakes, friction or bearings.  
**Weight**—On short skids, 650 pounds.  
**Floor Space**—32 inches by 52 1/2 inches.  
**Price—On short skids** ..... \$150.00  
 We recommend 4 H. P. or larger engine, or motor for this Hoist, depending on speed desired. See index.

Fig. 204

**Price** ..... \$250.00  
 We recommend 6 H. P. or larger engine or motor for this Hoist, depending upon the speed desired.

## DOUBLE PLATFORM REVERSIBLE HOIST

### Type 205

Our Hoist No. 205 Double Platform Reversible, has a capacity of 2000 pounds, and is designed for contractors and builders. It has a long drum with a flange in the center and is used in connection with two platform elevators, one fastened to each of the drums so that when one elevator is up the other is down and in this way balance each other. This machine is a great time and labor saver for hauling up building material, and can also be used for various other purposes.

### SPECIFICATIONS

**Capacity**—2000 pounds.  
**Drums**—Ample cable capacity, 4 inch diameter, 12 inches between friction and center flange, and 12 inches between center flange and end flange. Flanges 15 inch diameter. Hole in each drum for fastening cable.  
**Pulley**—16 inch diameter by 5 inch face. This is regular size furnished.

Fig. 205, Left Hand Side View

**Speed of Pulley**—Running 338 R. P. M. will hoist 75 feet per minute on first coil wound around the drum.  
**Operation**—Hand lever when brought forward raises the load and if pulled back reverses the load. Brake lever can be set and locked and the load held indefinitely.

**Adjustment**—Is provided to take up all wear on brake, bearings, chain and frictions.  
**Weight**—On short skids, 825 pounds.  
**Floor Space**—43 inches by 42 inches.  
**Price—On short skids** ..... \$300.00  
 We recommend 6 H. P. or larger engine or motor for this Hoist on speed desired. See index.

## PORTABLE FRICTION HOISTS

## HEAVY SINGLE DRUM

## Type 201

This Hoist has a capacity of 750 pounds. It is very simple and compact and can be mounted on portable gasoline engine outfits of  $1\frac{1}{2}$  to  $2\frac{1}{2}$  H. P. A very useful hoist for all around light lifting.

## SPECIFICATIONS

**Capacity**—750 pounds.

**Drum**—Ample cable capacity, 3 inch diameter and 12 inch space between flanges. Flanges 10 inch diameter. Oil cups and hole for fastening cable.

**Pulley**—Furnished 10 inch by  $3\frac{1}{2}$  inch face.

**Speed**—Pulley running 400 R. P. M. will hoist 75 feet per minute on first coil of cable wound on drum.

**Operation**—Entirely by one lever, which, brought forward, engages frictions for hoisting, and pulled back applies the brake. No foot lever is furnished as it is not needed.

**Adjustment**—Is provided for taking up all wear on brake, bearings and friction.

We recommend a 2 H. P. Engine for this Hoist.

See Index

Fig. 201

**Weight**—On short skids, 200 pounds.

**Floor Space**—24 inches by 24 inches.

**Price**—On short skids .....\$64.00

## SINGLE DRUM

## Type 202

Hoist No. 202 is specially adapted to meet the requirements for a 1000 pound Hoist for general contracting and building use. The demand for this size has been very heavy and proves the popularity of this machine.

We sell a great many of this size not only to contractors and builders, but also to excavators, warehouses, dairies, ice houses, well diggers, etc., and for use in hauling sand, concrete, lumber, etc., up inclines. They are extensively used for raising building material.

## SPECIFICATIONS

**Capacity**—1000 pounds.

**Drum**—Large cable capacity, 18 inch space between flanges. Flanges 12 inch diameter. Oil cups furnished and hole for fastening cable.

**Pulley**—Furnished 14 inch diameter by 4 inch face.

**Speed**—Pulley running 400 R. P. M. will hoist 75 feet per minute on first coil of rope wound on drum.

**Operation**—By one lever, which, when pulled forward, engages frictions for hoisting, and pulled back applies the brake. A foot brake lever is also furnished, which can be used separate or in connection with the hand lever.

**Adjustment**—Is provided to take up wear on friction, brake and bearings.

**Floor Space**—On short skids, 32 inches by 34 inches.

Fig. 202 Right Hand Side View

**Weight**—On short skids, 350 pounds. On 32 inch by 84 inch frame, 425 pounds.

**Price**—On short skids .....\$80.00  
On 7 foot frame ..... 90.00

We recommend a 2 H. P. or 4 H. P. Engine for this Hoist, depending on the speed desired.

See Index

## CARPENTER SAFETY CAISSON DEVICE

Interior View, Assembled

Ready for Use

The Carpenter Safety Caisson Device positively prevents caisson shaft and sheave from turning backward, even if the drive cable should break. There is no chance of an accident, or dropping of the hoist buckets.

Absolutely noiseless. This device covers in every respect the features for safety which are strictly enforced by the state factory inspection of Illinois. A number of tests have been made with this device on actual construction work, and in every instance it has proved itself efficient beyond our claims. It is highly recommended and endorsed by the state factory inspection of the State of Illinois.

It consists only of three parts—the shell or case which bolts to the inside of the cross piece of the tripod, the pawls or counter-balanced dogs which are a part of the block and are key-seated to the shaft on which the drive sheave and nigger head are placed, and the dust cover.

The method of installation is to bore four holes to the cross piece on the tripod and bolt the case to same; the block casting is then key-seated to the shaft; the cover serves as protection for the mechanism. After the first installation, these need never be removed from the shaft. When the engine is running there are no parts touching—no friction of any kind. There is, therefore, absolutely no need of lubrication of any kind. The first expense is the last expense, there being no wearing parts, and no parts to lose. It is absolutely impossible to drop the load with this outfit, due to the fact that the three counter-weighted pawls must come up even before the shaft stops turning.

These outfits are used at the present time by practically all of the large caisson contractors in Chicago as well as throughout the United States.

A set consists of one cover, one case, one block with dogs, one key for fastening to shaft.

Price per set, complete.....\$15.00

WE CARRY THE MOST COMPLETE STOCK OF CAISSON EQUIPMENT IN THE WEST

## CAISSON ACCESSORIES

## CARPENTER FOUNDATION WINCH HEADS

Principally used in sinking shafts or caisson for heavy foundations.

Each outfit comprises a turned winch head, 11 inches long, shaft and wire rope sheave. No timbers.

Each, complete.....	\$22.00
Extra shafts, each, 1 1/2"x2'0"...	3.60
Extra sheaves, each 24" diam.	11.70
Extra drums, each 8" diam....	9.00

Fig. 205A

Fig. 205B

## CAISSON BUCKETS

Heavy galvanized iron with three iron bands. 25 1/2 inches high; 20 inches diameter at top; 17 1/2 inches diameter at bottom; capacity 3 cubic feet. Fitted with a lock, as shown in illustration, to keep base in upright position.

Riveted and soldered, for water.....	each, \$14.50
Riveted only, for clay.....	each, 14.00

## CAISSON BUCKET HOOKS

Made of heavy wrought rod. As shown in Fig. 205B.

Price, each.....	\$0.70
------------------	--------

Fig. 205C

## CARPENTER HAND WINDLASS

## HAND WINDLASSES

Used where work is not large enough to install power. Iron forging is in one piece going all the way through the wood drum. Drum is held in place by two clamps, one at each end. Boxes for each end are furnished without additional cost.

Price complete, each.....	\$25.00
Extra boxes, per pair.....	2.00

OUR STOCK OF CAISSON EQUIPMENT IS THE MOST COMPLETE IN THE U. S.

## EXCAVATING AND HOISTING EQUIPMENT

Fig. 200

## STEEL DERRICK SKIPS

For handling stone, brick, dirt, etc. Made of extra heavy gauge steel, closely riveted and strongly braced. The corners are reinforced with special heavy steel angles. Extra bands of steel are fitted all around the wearing edges to insure additional life and service to the skip.

Fig. 64

## CHAIN SLINGS

We specialize in Chain Slings of all kinds, and for every purpose, from the small  $\frac{1}{4}$  inch size, equipped with bunk hooks, to the large 2 inch diameter special steel twin chains, used for hoisting steel in the construction of modern skyscrapers. We are equipped to make prompt delivery. We have a large force of mechanics who can make any special chain quickly. No order is too small to receive our best attention, nor too large to tax our capacity.

We show here another form of rigging; three lines being used. When we use the American foot block, as in this rig, the upper pivot is the center of the mast; the mast must be out of plumb. This does not affect the swinging of the Derrick as the pivots are plumb.

Illustration shows ordinary stiff leg derrick operated entirely by hand power. This is the cheapest form of derrick, and, while slow in operation, is very efficient. Fittings can be varied as may be desired, retaining original design of rig.

## SASGEN DERRICKS

### SETTER DERRICKS

Fig. 5711  
Top Point  
Setters' Derrick

Have many improvements over the old style Setter Derricks. The top frame is made of the best malleable iron, equipped with two sheaves, does away with the block on top, and increases the hoisting height about two feet, is extended forward which enables one to hoist the load without scraping the derrick. Have lugs for guy lines in front and back and also clamps for fastening extension pole. The shaft boxes are so constructed that the drum and gear shafts can be taken off without removing boxes. The bottom and side pieces are connected with two malleable castings. This makes a very strong connection and enables one to take it apart if necessary. The derricks are equipped with steel gears and both are built on the same order, with the exception that the Top Point is considerably lighter and side timbers come to a point at the top.

Fig. 5712  
Regular  
Setters' Derrick

#### TOP POINT SETTER DERRICK

#### REGULAR SETTER DERRICK

Capacity	Length feet	Price	Capacity	Length feet	Price
3000	18	\$45.65	4000	18	\$52.50
3000	20	48.10	4000	20	55.00
3000	22	50.60	4000	22	57.50

If longer lengths are desired add \$1.00 per foot net. For more capacity add \$2.00 per 1000 lbs. Fish tackle to swing derrick out and in containing 5 blocks and 50 feet  $\frac{5}{8}$  inch rope, \$5.00 net.

### POLE DERRICK COMPLETE

Has a capacity of 1400 lbs., equipped with winch not geared, or 2500 to 3000 lbs. equipped with geared winch. The weight is from 200 to 300 lbs., according to capacity. It is built of  $5\frac{1}{2} \times 5\frac{1}{2}$  selected wood with extension sheave frame, so that the load can be hoisted to top without scraping pole. The derrick is equipped with rollers at the bottom, winch, cable, and block, complete, ready for hoisting. No guy lines. Iron and stone setters, carpenters and mason contractors have found this Pole Derrick one of the quickest and most practical derricks for setting iron, stone, timbers, heavy joists, framing, etc.

Capacity 1400 lbs., 18 ft. .... \$36.55 | Capacity 2500 to 3000 lbs., 18 ft. .. \$43.10  
Equipped with 110 ft. cable, 20 ft. .. 37.80 | Equipped with 125 ft. cable, 20 ft. .. 44.35  
Block, winch not geared, 22 ft. ... 39.00 | Block, geared winch, 22 ft. .... 45.60

If longer lengths are desired add \$1.00 per foot net. Fish tackle to swing derrick out and in, containing 5 blocks and 50 feet  $\frac{5}{8}$  inch rope, \$5.00 net.

Fig. 5713

### CIRCLE SWING COUNTERWEIGHT DERRICK

Fig. 5714

#### For Loading and Unloading Cars and Wagons

Is especially handy around foundries or yards where heavy castings, iron in pipe, beams and bars, timbers, stone, etc., are loaded or unloaded, and for handling boats on docks or platforms in and out of water. Also for building and excavating. This machine can be used portable or stationary. It has a height of 14 feet, a circle swing of 18 feet, weight about 500 lbs., and a capacity of 1500 lbs., with cable and block ready for use.

Price ..... \$118.75

Fig. 5714

## SASGEN DERRICKS

Fig. 5751

The Newest Model Portable Circle Swing  
DerricksSTEEL CHAMPION CIRCLE SWING  
BUILDERS' DERRICK

This Portable Derrick is built of all steel, has self-lubricating bushings, load and boom brake. Boom can be removed in a few seconds by loosening one nut and raising 2 inches. Bottom sills and mast fold together, making it in two parts, compact enough so that a contractor can haul it to jobs in his auto.

For loads up to 1000 lbs. this Steel Champion cannot be excelled by anything on the market.

Capacity 100 lbs., weighs only 200 lbs., can be operated by hand, horse or power. Height, 7½ feet; boom extends 5 feet. Equipped with 110 feet crucible steel cable, block, cleats, and bolts for fastening, complete ready for work.

Drum holds 135 feet.

Price hand power.....	\$46.85
Price hand and power.....	48.10
Extra cable .....	per ft. See index

PEERLESS CIRCLE SWING  
DERRICK

This Portable Derrick is built of all steel except bottom sills, has self-lubricating bushings, load and boom brake, can be used hand, horse or power. Boom can be taken off in an instant by removing one nut. The bottom sills and mast fold together making it easy to remove or put up. Many contractors haul them to jobs in their automobiles. For the above reasons the machine is almost indispensable to contractors who build from 2 to 4 story buildings; for hoisting joists, timbers, iron, stone, terra cotta, reinforcing bars, wheelbarrows, etc.

Capacity 1,800 lbs., weight 275 lbs., height 8 feet, swing 10 feet. Equipped with 125 feet crucible steel cable, block, cleats and bolts for fastening, complete ready for work.

Drum holds 175 feet.

Price hand power.....	\$59.35
Price hand and power.....	56.25
Extra cable .....	per ft. See index

## STIFF LEGGED DERRICKS

These Stiff Legged Derricks are built with split mast and boom, fitted throughout with crucible steel fittings, making the Derricks light and strong and easy to set up. They can be used by hand or power and for the above reason are especially handy on build-

ings. Gears and frames of double hoisting winch are also made of crucible steel, which means safety and no breaking of gears. The one ton bottom sills work hinge-like in front and can be set at angle desired.

One ton legs and sills are 4x6, split mast and boom two-2x6.  
Two ton legs and sills are 6x6, split mast and boom two-3x6.  
Three ton legs and sills are 6x8, split mast and boom two-3 1/2 x 8.

## SASGEN DERRICKS

Fig. 5741

STANDARD CIRCLE SWING  
BUILDERS' DERRICK

This derrick has all crucible steel and malleable fittings, including winch, making the machine strong and safe on buildings. Has boom and load brake and is built so that the boom can be quickly detached. Mast folds to bottom sills, making it easy to take apart or set up. For hoisting loads 1500 to 2500 lbs. by hand or power this Standard Circle Swing Derrick has no equal and is the only full circle swing builder's derrick with that capacity.

Capacity 2500 lbs., weight 350 lbs., height 8 feet, swing 10 feet. Equipped with geared winch, 150 feet  $\frac{5}{8}$  inch steel cable, block cleats and bolts for fastening. Complete, ready for use.

Drum holds 275 feet.

Price, hand power.....	\$61.85
Price, hand and power.....	65.60
Standard with steel boom.....	extra 3.15
Extra cable .....	per ft. see index

## "A" FRAME DERRICK

Capacity 1400 to 2500 lbs., height 20 feet. Equipped with 125 feet of steel cable, block, and winch. Is built light and strong. By removing 4 bolts it comes in 4 parts. This derrick is very handy for hoisting and setting timbers, heavy joists, iron beams, columns, etc. It is mounted on swivel rollers and can be easily moved around on the floor, can be used without guy lines. We can furnish an "A" Frame Pole with regular pole derrick fittings that same can be used with "A" frame bottom uprights, or as a regular Pole Derrick with guy line. Price, extra.....\$7.25

## CAR PULLER LEAD SHEAVES

In Cast Iron Frame

**Single**  
Fig. 1866A

**Double**  
Fig. 1866B

These sheaves are made of cast iron, heavy pattern; the groove is very deep and machine turned. They run loose on a steel pin that is securely attached to a well proportioned, heavy cast iron frame. The grooves are made for single or double sheaves, as desired.

### Price List

Style	Diameter of Sheaves, ins.	Price	Style	Diameter of Sheaves, ins.	Price
Single	9	\$ 6.25	Single	18	\$ 28.00
"	12	13.00	Double	18	55.00
Double	12	26.00	"	24	120.00

## DERRICK SHEAVES

SHEAVE WITH GUARD

P. B. B. SHEAVES

**Fig. 4758-4762**

No.	Diameter of Sheave	Price
4758	8	\$ 4.00
4759	10	5.25
4760	12	7.00
4761	14	9.00
4762	16	11.00

## BULL WHEELS

On this page we illustrate two types of Bull Wheels. Both are made in two pieces and are easily attached to derrick after mast and boom are in place and rigged.

Fig. 900-907

## STEEL

No.	Diameter of Wheel, feet	Price
900	5	\$ 90.00
901	8	100.00
902	10	110.00
903	12	130.00
904	14	175.00
905	16	300.00
906	18	340.00
907	20	400.00

This Bull Wheel is constructed entirely of steel with steel braces to mast, and rods from rim to boom, making it very rigid, durable and easily attached. The rods apply the strain of the ropes directly to the boom, thereby avoiding any tendency to twist and break the derrick. Price does not include Foot Block, Guide Sheave or Timber.

## WOOD

No.	Diameter of Wheel, feet	Price
908	8	\$ 70.00
909	10	80.00
910	12	90.00
911	14	100.00
912	16	125.00
913	18	150.00

Fig. 908-913

The Wood Wheel is constructed with a steel rim; it is cheaper than the steel, however; for a derrick that is moved frequently it is preferable. No rods are used in this wheel as the braces are arranged so as to act directly against the boom. With this type it is unnecessary to cut or bore either mast or boom.

Price is for Bull Wheel only, and does not include foot block, guide sheaves or timber, in mast, boom and stringers.

## DERRICK EQUIPMENT

### ROPE FITTINGS

Guy Tighteners are a great advantage, as with them guys can be kept taut without removing the fasteners.

7477	18x12	10x12	14,000	220.00

## DERRICK FITTINGS

The illustrations on this page are sectional views of the improved step bearing used on the foot blocks and steps shown on pages following. It embodies features of lubrication with the ball and socket principal of bearing. The pintle on the foot block and the cup portion of the step are chilled and between these bearing surfaces is a steel cupped washer all working in a reservoir of oil. The points of excellence claimed for this mast foot bearing are lubrication, wearing qualities and full contact between bearing surfaces should the mast be out of plumb. All sheaves in derrick are furnished bronze bushed, graphite self lubricating unless otherwise ordered, and can be supplied with center oiling pins or with oil chamber in the sheave.

## DERRICK CASTINGS

Fig. 975

Various types of Derrick Steps are shown on this page. The plain steps are for hand-power derricks, and those with one or more sheaves are for power. All sheaves in our standard fittings have phosphor bronze bushings unless otherwise stated.

DERRICK FITTINGS  
STEPS WITH ONE SHEAVE

No.	Size of Plate inches	Inside Diam. of Cup, in.	Size of Sheaves	Price
970	11 x 18	6½	12x2x1½	\$11.00
971	11½ x 19	8½	14x2x2	17.00

Fig. 1357-1372

## DECK PLATE WITH BOOM SEAT

Fig. 1270

Our deck plate is very convenient to use on boats, docks, or places where space is limited. Having machine bearings, it is very easy to operate.

No.	Size of Boom inches	Price
1270	8	\$28.00
1271	10	34.00
1272	12	42.00
1273	14	65.00
1274	16	90.00

## MAST AND GAFF FITTINGS

Fig. 1265A Round

Fig. 1265. Square

Square

No.	Width of Bracket inches	Size of Jib inches	Price
1265	6	6	\$12.00
1266	9	8	16.00
2167	12	10	20.00

The Mast and Gaff fittings are for use on a rigid mast, or on corners and sides of buildings where a mast is not desired.

Round

For price give capacity and size of Mast and Gaff.

## DERRICK CASTINGS AND FORGINGS

## GUY CAP WITH LINKS

Fig. 533-540

The wrought iron rim on this guy cap is shrunk on the cast iron plate.

No.	Size	Number of Guys	Diameter of Mast at Top, ins.	Price
533	A	4	8	\$6.00
534	B	4	10	7.80
535	A	5	8	6.50
536	B	5	10	8.30

## PILE DRIVERS

## No. 1 STYLE FENCE-POST DRIVER

For End Driving

## FOLDING LEADERS

This outfit is designed for use with the ordinary farm or mountain wagon, the frame work of the driver being arranged to set on the wagon bolsters between stakes. The leaders are placed sufficiently to the rear to admit of backing up to an existing fence, as would be required in repair work. When building new fence the wagon is simply taken along the proposed line, leaving the fence behind it.

The hammer is raised by horsepower direct, an extra horse being used solely for that purpose.

The leaders and back braces are provided with hinge joints to admit of folding down over the wagon when going to and from the work—the

down position being shown in the cut by dotted lines. The leaders are 20 feet high.

A full set of iron work consists of 600-lb. drop hammer with triangular die; nippers with block; one pair of top sheaves, shafts and boxes with bolts; one pair No. 1 toggles, with bolts; one pair No. 2 toggles, with bolts; 4-inch channel iron liners, with bolts; one pair of heavy forged hinges, with bolts, for foot of leaders; one pair of locking devices for back braces, including working drawings of wood work when desired. The three pairs of hinges on back braces are the ordinary 12-inch strap hinge.

The outfit can also be furnished complete, with all framework, ready to attach to wagon.

## No. 2 RIGID LEADERS FOR SIDE DRIVING

Some people prefer this form of post driver for the reason that as the driving is done at the side of the wagon there obtains an especial facility for replacing old posts. The framework is arranged to rack in and out on top of the wagon, being racked out to drive the post and racked in again to enable the wagon being drawn straight ahead, clear of and past the post. The leaders are 20 feet high. They may be mounted at any time on either side of the wagon. A special, wide-track wagon is required for this outfit—7-foot track being preferable. A full set of iron work consists of a 600-lb. drop hammer with triangular die; nippers, with block; one pair of top sheaves, shafts and boxes with bolts; one pair of No. 1 toggles, with bolts; one pair of No. 2 toggles with bolts; 4-inch channel iron liners, with bolts, and the racking-out device complete, with shaft, cranks, pinion, gears, racks, boxes and ratchets, with bolts for holding in place, together with drawings for wood work when desired.

This outfit can also be furnished complete, with or without wagon, and including wood work.

## PILE DRIVERS

## TOWNSHIP PILE DRIVERS

Usually Operated by Horse-Power, for Hammers that Weigh from 500 to 1200 Lbs.

In order to meet the demand for a Pile Driver for use on small bridges and other light driving, at reasonable cost, we will furnish them as represented in the engraving. We have them in different capacities, from 500 lb. hammer up to 1200 lbs.

The hammer is usually raised by horse-power, the smaller sizes being hoisted direct, that is, without a purchase block, and the larger sizes have one end of the line fastened to a suitable post, driven into the ground, while the other end is passed through a table-block which is fastened to the main hoisting line and leads to the whiffletree direct. Sometimes contractors use a winch, which is bolted to the ladder. It, of course, will do the work, but is very slow. A belt-driven hoist (see index), can also be applied. Tackle-blocks can also be used, instead of sheaves at top and bottom, on smaller sizes, when so desired. (See index.)

The Pile Driver complete, in addition to the iron work below, consists of the framing as shown, fastened together with bolts so as to be readily taken apart for transportation, having turned ladder rungs, turned maple rollers, and a nipper block, but not including lines or adjustable trip. Prices include painting and delivery on car, "knocked down," Chicago.

A full set of iron work usually consists of a hammer with steel die fitted in, nippers, top sheaves, shafts, boxes and bolts, one pair of No. 1 toggles with bolts, one pair No. 2 toggles with bolts, channel-iron liners, with bolts and washers, together with working drawings of wood work when desired. Snatch-blocks at bottom, we think, are preferable to fixed sheaves for horse-power.

FOR ROLLERS, JACKS AND BARS, SEE INDEX

## PILE DRIVERS

## SWIVELING PILE DRIVER

## Arranged With Telescope Leaders

For driving below reach of rigid leaders, in trenches, dams, caissons, foundations, etc.

The telescope leaders are raised and lowered by a separate line, hence adjustable to depth desired.

The combination of swiveling driver rollers (which allow moving fore and aft and sideways) and the telescope leaders, makes a highly efficient machine—especially if a steam hammer be used. When work suitable is extensive enough to warrant, we think one of these machines will be found to be a good investment.

When a Pile Cap is used with Drop Hammer, Toggles are not required.

In case a Steam Hammer is to be used, omit Drop Hammer and Toggles.

For Hoisting Engine and Piping to connect to Steam Hammer Hose, see index.

On larger sizes of Leaders freight rates for long distances are liable to be prohibitory.

Telescope Leaders: Prices on application. Please send full particulars.

## WARRINGTON IMPROVED STEAM PILE HAMMER

Its chief characteristics are:

**First**—A very simple and positive valve gear.

**Second**—A short steam passage, avoiding waste of steam.

**Third**—Quick, and wide opening of exhaust, avoiding back pressure during the drop (a very important matter).

**Fourth**—Turned columns connecting the cylinder and base, and serving to guide the ram. The guide holes in the ram are accurately bored by the use of a "jig," and unfair strains on the piston rod are avoided.

**Fifth**—The piston is forged on its rod. Channel bars are attached on each side to enable the hammer to drive below the bottom of the leaders.

The slide bars are now made with improved fastening in ram and of forged steel, instead of steel castings as heretofore.

Every improvement suggested by an experience of nearly forty years in the manufacture of three distinct forms has been made upon these hammers to produce a simple and thoroughly reliable machine, easy of operation and free from vexatious breakdowns.

The action is regular and continuous. Any kind of pile can be used, hard or soft, straight or crooked, and driven without injury to the head of the pile, in the hardest kind of driving, sand or hard pan. The most ordinary kind of timber, such as spruce, bass and pine, can be thus driven without the use of bands.

The hammer is operated by being raised in the leaders (the only duty of the engine aside from hoisting the pile) and allowed to rest its full weight upon the pile. Steam is turned on and the hammer pounds automatically until the pile is driven to the required depth.

### We furnish with each hammer:

A steam hose of the best quality manufactured. For the No. 0 size, 50 feet of 2½ inch 8 ply; for the No. 1 size, 40 feet 2 inch 6 ply; for the No. 2 size, 35 feet of 1½ inch 6 ply; for the No. 3 size, 30 feet 1½ inch 5 ply, and for the No. 4 size, 25 feet 1 inch 5 ply. It is advisable for the purchaser to wrap the hose to prevent chafing. The hose is fitted with specially heavy shanks, rings and nipples, and forged clamps. These parts specially manufactured as they require to be much heavier than those ordinarily sold by dealers in brass goods.

An eye-bolt to insert in piston head, to draw it out when needed, a cylinder cock, hose spanner and wrenches.

The No. 0 is used for 18 inch and 20 inch wooden piles and for 16 inch to 20 inch square or round concrete piles. In driving these latter a cast steel driving head should be used, as it holds a wooden block to receive the impact of the hammer.

The No. 1 is used for 14 inch to 16 inch wooden piles and for general foundation work.

The No. 2 is used for 12 inch and 13 inch wooden piles and for general railroad work.

The No. 3 is used for 9 inch to 10 inch wooden piles and largely for wooden sheeting.

The No. 4 is used for driving fish stakes for pond nets along the shore and in connection with sheet-piling, for small wooden sheeting.

**For driving steel sheeting all the hammers are used with sheeting caps.**

We can furnish these hammers with three different forms of bases, all of which are interchangeable. 1. The regular, or solid form, which has a conical recess to fit over and rest on the head of the pile and which is used for all ordinary requirements in driving, and in connection with sheeting caps.

2. The open end base for sheet piling.

3. A special form known as the McDermid base, from its patentee.

**All hammers are fitted with the regular base, unless otherwise ordered.**

**The open end base can be fitted to the No. 1, 2, 3 and 4 sizes.**

**The McDermid base is made for the No. 1 and No. 2 sizes of hammers only.**

We list below the five sizes we furnish, with the leading dimensions:

## PILE HAMMERS

### No. 5 STYLE

### SHEETING HAMMER FOR STEAM OR AIR

#### For Driving Wooden Planking and Steel Sheet Piling

Constructed on the style of the air drill (double-acting), with heavy base to rest on pile.

Very efficient on sewer work and coffer-dams.

Very much superior to hand mauling and drop-hammer driving.

The piston and ram are of steel, forged in one piece. The piston rings are of medium steel, cut from the solid.

The base of the hammer is hollowed out to receive the striking bar. This latter is a forging, with a tee-shaped head at bottom, to rest upon the pile, and upon the upper end of which the ram delivers its blow. This striking bar is made in such a manner that while it is free to travel down some distance with the pile when struck, still it cannot drop out of the machine.

In operation the hammer is suspended from the boom of a derrick or similar device, no leaders being used. The hammer is lowered on top of pile until it rests its full weight upon the striking bar. Steam or air is then turned on, and as the pile and hammer descend the tackle line is slackened off just fast enough to maintain the hammer in a vertical position.

With the hammer are provided the piping shown, throttle-valve and oil cup, with handles for same.

The hose required is 1 inch diameter, four ply.

The cylinder is 4 inches diameter; its stroke from seven to eight inches.

The length of hammer over all is five feet eight inches.

Weight, 700 to 800 lbs.

The jaw in base is four inches wide, three and three-quarters inches deep vertically, and is ten inches long—this being the width of the base casting.

A ten horse-power boiler will supply the hammer with steam.

The number of strokes per minute is about 125.

Steam Sheetting Hammers, No. 5 size, including hose and fittings.....\$240.00  
Omitting hose and fittings.....215.00

## DROP HAMMERS

We aim to get the best form of hammers suitable for the purpose and have given careful attention to three points, viz:

**First**—To get as much of the weight in the bottom of the hammer as possible.

**Second**—To have the hammer as long as the size of the leaders will permit. This gives longer bearing in the guides.

**Third**—To have as little play as possible between the hammer and the leaders. This is required to obviate as much as possible the jar on the leaders at the time of striking the pile.

Instead of the old-fashioned strap at the top a pin is recessed in the body of the hammer, so as to take advantage of all the height of the leaders possible.

All corners are rounded.

Where Channel Iron Liners are used, one-quarter of an inch play, that is one-eighth of an inch on each side, appears to be sufficient, but where Strap Iron Liners are used, one-half of an inch should be allowed.

Weight of Drop Hammer lbs.	Distance Between Jaws inches	Width of Jaw Channel Iron Liners	Width of Jaw, Strap Liners

FOR HAMMER LINES, WIRE ROPE AND CHAIN, SEE INDEX

## PILE DRIVER FITTINGS

## DISHED PILE HEAD CAP

For protecting pile heads. Used with steam pile hammers which are fitted with the regular or cone-shaped base. Not required when hammer has a McDermid base.

This form is preferred by many to a plate with or without a spike hole for nailing on pile.

These are hammered from steel billets.

State size of hammer with which to be used.

Dished Head Pipe Cap, for No. 1 steam hammer.....\$12.00  
Dished Head Pipe Cap, for No. 2 steam hammer..... 9.00  
Dished Head Pipe Cap, for No. 3 steam hammer..... 7.50

Fig. 21  
Dished Pile Cap

Fig. 120  
Open End Base

## BASES FOR STEAM HAMMERS

## Warrington Patent Open End Base

This form has been devised for driving wooden sheet piling, such as is used for trenches and coffer-dams. It is interchangeable with the other two styles of base on any hammer. The recess is rectangular, slightly tapering toward the bottom, and one end is left open to permit of driving all piles to the same level.

The greatest thickness of pile for which the base can be made is as follows:

No. 1 hammer .....	9½ inches
No. 2 hammer .....	9 inches
No. 3 hammer .....	7 inches
No. 4 hammer .....	5 inches

When ordering specify the outside rectangular dimensions of pile and state whether open end is to be toward or away from the driver. See table below for prices.

## McDERMID PATENT BASE

This base, designated B in the illustration, is interchangeable with the regular or solid base, the only difference being that in this a recess is provided in which is placed a steel plate, D. This plate rests on the pile and on it the driving is done; it is inserted through an opening in the side of the base, which opening is covered with a door, E, held in position by a bolt through lugs, C.

This form of base is exceedingly advantageous and desirable when the pile is soft, when the driving is very hard and an excessive number of blows is required to be given a pile. In addition to this, the plate forms a stop, bringing the pile to the proper point and preventing piles smaller than the opening from coming through.

## PLATES FOR McDERMID PATENT BASES

## (McDermid Plates or Beater Plates)

The McDermid base is now made for the Nos. 1 and 2 sizes of steam hammers.

We furnish two kinds of plates, one of hammered mild steel, of which we carry a large stock, and the other of cast manganese steel, which we can furnish to order. They are 1¾ to 1½ inches thick for the No. 1 hammer, and 1½ to 1¼ inches thick for the No. 2 hammer. The forged plates are machine finished on the edge, the manganese plates ground; all to proper size.

Most operators prefer the hammered steel plates and owing to the limited demand we no longer maintain a stock of the rolled steel McDermid plates formerly offered.

## PRICE FOR STEAM HAMMER BASES

Size	Solid Base	Open End Base	McDermid Base
No. 1.....	\$100.00	\$140.00	\$160.00

OUR STOCK OF PILE DRIVER EQUIPMENT IS ALWAYS COMPLETE

## PILE DRIVER FITTINGS

THE PERFECT HEAD-BLOCK FOR  
PILE DRIVERS  
LINDSLY'S PATENT

Fig. 0

This is a development of long experience with the troubles incident to the ordinary headgear arrangement of pile drivers, and has been found extremely satisfactory in actual use.

Figs. 1 and 2

It is complete and self-contained; can be bolted down on the driver frame in a few minutes, and, being built on the interchangeable system, any part meeting accidental damage can be readily replaced.

It is durable and easy-running, as the sheaves are fast on steel shafts running in babbitted boxes.

The inclined guide rollers permit the pile line to lead out in any direction without extra friction or wear, and the entire Head-Block is so constructed that the lines cannot run against any sharp angles, nor can they be displaced from the sheaves in service.

The Head-block is now made in three sizes:

The No. 0, special, for No. 0 steam hammer only, which hammer weighs 16,000 lbs.

The No. 1, for drop hammers of 2,000 lbs. weight and over.

The No. 2, for drop hammers of 1,800 lbs. weight and under.

The Nos. 1 and 2 are the sizes ordinarily used, and as the hoisting line falls centrally in the leaders they are especially suitable for drop hammers. They can, of course, be used with steam hammers also, but when the hammer is raised to the top of the leaders the line will not be entirely fair. This can be partially avoided by moving the Head-block forward.

## SIZES OF SHEAVES AND LINES

Size	Hammer Sheave	Hammer Line		Pile Sheave	Pile Line		Price Each
		Wire	Manila		Wire	Manila	
No. 0.....	16 inches	$\frac{3}{4}$ inch	2 inches	12 inches	$\frac{3}{4}$ inch	1 $\frac{1}{2}$ inches	\$160.00
No. 1.....	16 inches	$\frac{3}{4}$ inch	2 inches	12 inches	$\frac{3}{4}$ inch	1 $\frac{1}{2}$ inches	115.00
No. 2.....	12 inches	$\frac{3}{4}$ inch	1 $\frac{1}{2}$ inches	9 inches	$\frac{5}{8}$ inch	1 $\frac{1}{4}$ inches	93.00

The sizes of lines given above are the largest which the sheaves will accommodate; smaller lines can, of course, be used.

In ordering specify size of head-block and state whether sheaves are required, one or both, for wire or manila rope.

## TOGGLE IRONS

## PILE DRIVER FITTINGS

THOMAS A. KEARNS'

PATENTED

## PIPE PILE FOLLOWER

For Driving Piles Below the Surface of the Ground

This consists of a cast iron cap, "C," in which is a recess to receive the pile, and a wrought iron pipe, "B," of the length to suit the depth required. This pipe is cast into the follower cap. It was found that fastening by bolts was very insecure. The pipe is filled by a turned oak timber, which we provide, but to be hammered in by the operator. A heavy hammered iron band, "H," is shrunk on to the pipe, leaving a recess of about  $1\frac{1}{2}$  inches to receive a short block, "I," having a hammered iron band, "K." A small hole, "L," is drilled in the bottom of the pipe to allow air to escape while the timber is being driven in. Two steam pipes run down either side to release the follower from the pile. These pipes are fitted by unions to the nipples which are cast into the follower cap, and held to the pipe by staples driven through the pipe into the wood.

The great advantage of this follower becomes apparent in sticky soils, when the driving is below the surface of the ground, as by means of the small pipes steam or air under pressure may be introduced on top of the driven pile when it is desired to withdraw the follower, thus much facilitating an oftentimes difficult operation.

We furnish this in two sizes of pipe—10 inch and 12 inch, extra strong—of length to suit the work. The smaller is for piles from 10 to 14 inches diameter, and the larger for piles 14 to 18 inches diameter.

Price on application—governed entirely by market price of pipe.

## FOLLOWER CAP

In foundation work piles are required to be driven below the surface, sometimes 20 feet. When driven to the end of the leaders a follower has to be used for the remaining distance. The Follower Cap here shown is recessed on the bottom, the same as the pile cap, to fit over the pile. In its upper end the operator inserts and bolts a pile of the requisite length, with its upper end trimmed to fit into the pile cap or steam hammer. We make this in two sizes; the A size is for piles up to 12 inches diameter. The upper recess is for a 12 inch diameter Follower, and is 6 inches deep; the casting is 12 inches long over all. The B size is for piles up to 16 inches diameter; the upper recess is for a 14 inch diameter Follower and is 8 inches deep; the casting is 15 inches long over all. Bolts are included.

Fig. 1:

Size A. 12 inches diameter.....\$25.00

Size B. 14 inches diameter.....33.00

Fig. 1

## OPEN END FOLLOWER CAP No. 2

This is for driving wooden sheeting. When ordering specify the outside rectangular dimensions of pile.

## RIGID ROLLER BEARINGS

These are plain castings to take the place of the spool rollers. Instead of rolling they slide on the long rollers. With pipe rollers they are also satisfactory. This pattern is for 10 inch pipe about  $10\frac{1}{4}$  inch diameter, and also for 10 inch diameter oak roller. Specify when ordering which is to be used.

Rigid Roller Bearings.....per set of 4 \$46.00

Each.....11.50

FOR WIRE ROPE, BOLTS, BLOCKS, ETC., SEE INDEX

Fig. 3

## PILE DRIVER FITTINGS

### STANDARD SHEAVES

Fig. 1

Fig. 2

Fig. 3

Our sheaves are made from new patterns, grooves smoothed out, and pressed tightly on shafts, as it has been found advisable to put the wear on bearings. The "Top Sheave" boxes are made in two styles: **First**—Solid, bored out, with oil holes on top. Some people like grease cups or oil cups, screwed into these oil holes to save trouble of going up and down too frequently. **Cups are an extra charge, see index.**

**Second**—Open, to receive oiled waste, as shown in cut, rabbitted on lower half.

The "Bottom Sheave" runs loose on shaft, which extends from sill to sill, to allow of a lateral movement between the sills to accommodate the rope as it winds on the hoisting drum. It may be provided with a wooden box, or housing, to prevent the line from jumping off when slack.

We can furnish, from stock, any of these sheaves for wire rope, of approximately the same diameter as specified for manila rope and at the same prices.

### DIMENSIONS OF STANDARD SHEAVES AND SHAFTS FOR EITHER WIRE ROPE OR MANILA LINE

	500 to 800 lb. Hammer	1000 to 1800 lb. Hammer	2000 lb. Hammer and Over
Bottom Sheave.....	12 inch.....	16 inch.....	20 inch.....
Bottom Sheave Shaft.....	2½ inch.....	2½ inch.....	2½ inch.....
Hammer Top Sheave.....	9 inch.....	12 inch.....	16 inch.....

Pile Line Top Sheave.....	6 inch.....	9 inch.....	12 inch.....
Pile Line Top Sheave Shaft.....	1½ inch.....	1½ inch.....	1½ inch.....

All Sheaves are measured at the bottom of the groove and have specially deep flanges. They are designed for this service and are more substantial than sheaves ordinarily sold.

Weight of Drop Hammer	Fig. 1 Top Sheaves Shafts Boxes and Bolts per set Solid Boxes	Fig. 2 Top Sheaves Shafts Boxes and Bolts per set Rabbitted Boxes	Fig. 3 Bottom Sheaves Shafts Boxes and Bolts Without Housing
500 to 800 lbs.....	\$10.50	\$13.00	\$12.00
1000 to 1800 lbs.....	14.90	17.50	17.00
2000 lbs and over.....	19.80	23.00	23.00

## NIPPERS

The general use of friction engines for driving piles has done away, to a large extent, with the demand for Nippers. The larger sizes are seldom called for. We have added to our list a smaller size for very light hammers. These Nippers are forged out under a steam hammer, and have machine finished hinges and hardened steel points. The arms are set to suit width between the leaders, which should be sent us.

The Nipper Blocks are of oak, well bolted.

	Nippers	Blocks
No. 1 Nippers, for hammer 2500 lbs. and over.....	\$50.00	\$9.50
No. 2 Nippers, for hammer 1800 to 2200 lbs.....	40.00	8.50
No. 3 Nippers, for hammer 1000 to 1600 lbs.....	32.00	7.00
No. 4 Nippers, for hammer 500 to 800 lbs.....	11.50	7.00
No. 5 Nippers, for hammer 300 lbs. and under.....	18.00	6.50

With Block

Without Block

## ADJUSTABLE TRIPS

The Adjustable Trip is used for striking light blows, such as needed for a pile of small diameter, or for pile very near its destination. It is raised or lowered in the leaders by means of a small line, with suitable sheave at the top. The sides are of plate iron the striking plates, at the ends, of cast iron, to give the necessary weight, while the ball is of wrought iron. We furnish them of four sizes, of the dimensions to suit leaders.

Adjustable Trip No. 1, for hammer 2000 lbs. and over.....	\$20.00
Adjustable Trip No. 2, for hammer 1500 to 1800 lbs.....	18.00
Adjustable Trip No. 3, for hammer 1000 to 1200 lbs.....	16.00
Adjustable Trip No. 4, for hammer 500 to 800 lbs.....	12.00

FOR WIRE ROPE, BLOCKS, AXES, ETC., SEE INDEX

## PILE DRIVER FITTINGS

## DRIVING BLOCKS

Turned from Black Gum Logs for Pile Caps and Sheetung Caps

For several years we have been furnishing white oak for making driving blocks, but have experienced considerable trouble, and frequent loss, from checking of the timber and blocks; besides we have had trouble at times in getting the material.

Black Gum does not appear to check, even when kept in a dry room, in fact, it seems to be the ideal wood for this purpose.

We have had two comparative reports only, as follows: U. S. Reclamation Service, Putnam, Montana, L. V. Branch, Engineer: "The five Black Gum cushion blocks shipped us were most excellent blocks. Any one of these five blocks was the equal of the very best oak block and did the same service as two of the poorer oak blocks. The Black Gum blocks were more uniform in quality than the oak blocks and as an average I would estimate that two Black Gum blocks were equal to three oak blocks." James Black Masonry & Contracting Co., St. Louis, Mo.: "The oak cushion blocks stood (12) feet of driving; that is, one pile driven 12 feet. The Black Gum cushion blocks lasted for 7 piles at a depth of 35 feet each or 245 feet of driving."

Many contractors use waste ends of piles, which, of course, is the cheapest way to do where piles suitable for the purpose are being used, but in many parts of the country where timber is very poor, these blocks may be found a good purchase. We heretofore have aimed to sell blocks only in connection with caps, that is, sending one out with each cap, but are now offering them for regular use.

## PRICES

Short blocks for drop hammer.....	each	\$2.70
Long blocks for No. 1 Warrington steam hammer, about 20 inches long.....	"	6.00
Long block for No. 2 steam hammer, 20 inches long.....	"	5.00
Long block for No. 3 steam hammer, 15 inches long.....	"	4.00

## PILE PULLER

For Steel Sheet Piling

Made of steel in two sizes.

Gripping cams have hardened tool steel teeth.

The action of pulling increases the grip.

In ordering, give us the make, size and length of pile, also what information you can about the difficulty of driving.

Prices, each

Large .....	\$120.00
Small .....	60.00

## PILE PULLER

For Wood Sheet Plank

Made for 3 inch by 10 inch plank, but can be used for other widths and also for 2 inch planks.

Steel forging with ½ inch chain and ring.

Price, each, 3 inch...\$11.50

## PILE LIFTING CHAINS

These are for use at end of pile lines, for winding around the pile and taking hold. They are made of different sizes of chain and different lengths. For 2000 lb. to 2500 lb. hammer, ½ inch chain by 8 feet long is a quite popular size.

Care must be taken in ordering not to confuse these with the pile-pulling chains, which, of course, are very much heavier, and with special hammered hooks.

½ inch by 8 feet long.....Price, each \$10.00

Other sizes in proportion.

## PILE DRIVER FITTINGS

## PATENT CAP FOR PILE DRIVING

Casgrain's

In the operation of pile driving it frequently happens that the piles are either split or broomed on their tops by the concussion of the hammer. The Casgrain Cap overcomes this difficulty.

WE CAN FURNISH ANY KIND OF SPECIAL FORGINGS PROMPTLY

## PILE SAW ARBOR

For Cutting off Piles Under Water

Fig. 727A

Our regular pile driver engines (see index) can be fitted with an attachment for driving the saw. When this feature is desired we furnish the frame with an extension on the front end to carry an extra shaft, driven by a pinion from the front drum shaft; this shaft carries a pulley in the center of the engine and from which the pile saw arbor may be driven direct.

In ordering, state length required.

Price of outfit depends on the market price of fitting. We will be pleased to quote on application.

As ordinarily used they are made to cut off piles 16 to 24 feet under water. We usually allow for  $8\frac{1}{2}$  feet in length above water, to which is added the depth of cut required to get length of Arbor.

The shaft is  $3\frac{7}{8}$  inches in diameter and counter-balanced. A 42-inch saw is usually sufficient, but for very large piles this size would have to be increased.

The Arbor works on a spline its entire length, and is readily adjustable to any depth within its range. Side rollers and frames are furnished, to be fastened to the inner side of leaders, for the belt to run on.

The speeds and approximate horsepowers required for different diameters of saws are as follows:

42-inch Saw, 600 R. P. M., 15 to 20 H. P.

48-inch Saw, 525 R. P. M., 20 to 25 H. P.

Price includes the saw, arbor, pulley-bearings, sheaves, swivel-hook, counter-balanced sheaves, side frames and rollers, with necessary bolts to fasten all to woodwork, together with a drawing for the woodwork and fastening in place.

Fig. 727

## Fig. 24 POLE PULLER

Fig. 24. Pole-Puller is a new device adopted by the telegraph and telephone companies, effecting on an average, a saving of 75 per cent on telegraph poles.

The method of hoisting is as follows:

The Pole-Puller is used to pull poles that have become decayed just above the ground. The decayed part is cut off and the pole is reset, without moving the pole from the spot or interfering with the wire or service. This gives the poles new life and saves about 75 per cent in maintenance and overhead costs.

It is powerfully geared and is 7 feet high, weight, 140 pounds.

The shaft for cranks measures 19 inches overall from end to end.

Furnished with  $1\frac{1}{2}$ -inch tallow-laid manila line,  $\frac{1}{2}$ -inch chain, and 2 cranks.

Price, complete.....\$40.00

Fig. 24

## ATTACHABLE SERGE DRUM OR SPOOL

Fig. 13 Drum illustrated to the right, is used with a long rope to make a high lift, still retaining the full capacity of the windlass or crab.

It is secured by two keys and four bolts and can be attached in a few minutes.

Spool for  $1\frac{1}{2}$ -inch to  $2\frac{1}{2}$ -inch rope.....\$11.50

Price each.....\$11.50

Spool for  $\frac{3}{8}$ -inch to  $1\frac{1}{2}$ -inch rope.....\$5.00

Price each.....\$5.00

## DIVING APPARATUS PUMPS

Fig. 5791  
Three Cylinder

Fig. 5792  
Two Cylinder Single Acting

Four styles of Pumps are made as follows:

### TWO CYLINDER DOUBLE ACTION PUMP

So constructed that two divers can be supplied with air at the same time or all the air given to one diver if it is necessary to descend to great depths. This pump is the one supplied to the United States Navy Department and placed on all warships.

Price each.....\$500.00

### THREE CYLINDER FINE FINISHED PUMP WITH WATER TANK

Designed for one diver and guaranteed to supply him with air at any depth to which he can go. Particularly used for all deep-sea work, sponge and pearl fishing, or where it is necessary for the diver to remain submerged for a long time.

Price each.....\$400.00

### THE THREE CYLINDER PLAIN FINISHED PUMP

Designed for one diver and of the same general construction as the fine finished pump. No water tank is attached, nor are the parts so highly polished. This is the standard machine for wreckers, bridge and pier builders, engineers, contractors, steamship companies, etc., and it is guaranteed for depths up to 90 feet.

Price each.....\$250.00

### THE TWO CYLINDER LEVEL PUMP WITH EITHER HORIZONTAL OR UPRIGHT HANDLES

Used for examination or other short period diving around waterworks, dry docks, marine railways, dams, docks, breakwaters, where depths do not exceed 30 feet.

Same as furnished with Outfit No. E.....\$75.00

### OAK CASE FOR TWO CYLINDER LEVER PUMP

Easily attached to pump furnished with our No. E outfit and adding greatly to its appearance. Special up-right handle in two pieces, also made so as to fit in case. Case is fitted with lock and two handles, and proves of great value if pump is frequently shipped from place to place.

Price each.....\$12.50

Fig. 5793

### BELT WEIGHTS WITH SHOULDER STRAPS

To be worn around waist. Weights attached with screws, allowing removal if belt is considered too heavy.

Per set.....\$27.50

A cheaper set furnished with weights riveted to belt.

Per set.....22.00

## DIVING DRESS

Furnished in Nos. 1, 2, 3 and 4 sizes for men measuring in height respectively 5 feet 6 inches, 5 feet 8 inches, 6 feet, and over 6 feet. Fitted with pure gum cuffs and gasket. Gasket punched to receive bolts on collar of helmet if so ordered. Guaranteed both air and water tight.

Price, each ..... \$50.00  
Extra cuffs, per pair, ..... 5.00

Dresses can also be furnished in above sizes reinforced with an extra layer of canvas on the knees, elbows, shoulders, crotch and feet, at a slightly higher figure.

## WADING DRESS

Furnished in the same sizes as Diving Dresses, but with rubber cuffs only. No gasket. Designed to be worn without helmet in water over worker's head. A high cape extends upward and is held by fellow worker who directs operations.

Price, each ..... \$45.00  
Extra Cuffs, per pair, ..... 5.00

## CANVAS DRESS

Used to protect the entire Diving Dress from wear.

Price, each ..... \$6.50

## CANVAS CHAFING PANTS OR OVERALLS

Used to protect the lower portion of Diving Dress from wear, and fitted with straps to cross shoulder-piece of helmet to hold same firmly on shoulder.

Price, per pair ..... \$4.00

## RUBBER CANVAS MITTENS

Made of rubber vulcanized between two layers of best grade of canvas ..... per pair \$5.00

## BLACK RUBBER MITTENS

Made with black rubber hands, canvas and rubber gauntlets ..... per pair 5.00

## CANVAS GLOVES

Two fingers, material similar to our regular Rubber Canvas Mittens; best for rough work, where use of the fingers separately are required ..... per pair 6.00

## RUBBER GLOVES

Five fingers, material similar to our regular Black Rubber Mittens; most desirable glove for work where the use of each finger is required. ....

Price, per pair ..... 6.00

Fig. 5815. Rubber Gloves, Five Fingers

## DIVING APPARATUS

## COMPLETE DIVING APPARATUS, No. E.

This outfit for any depth up to 30 feet for one diver. Particularly adapted for water-works, examining ships' bottoms, repairing dams, laying pipes, dock and breakwater building, marine railways, etc.

1 Two Cylinder Air Pump, capacity 30 feet depth of water.....	\$75.00
*1 Improved Quarter Turn Screw Helmet, to receive air in head, or to receive air in breast-plate, either style, including safety valve and adjustable regulating valve 3 lights \$100.00, 4 lights.....	105.00
1 Diving Dress.....	50.00
100 feet Air Hose (two pieces), with couplings.....	40.00
1 set Horse Shoe Weights, complete with ropes.....	15.00
1 pair Diving Shoes, with lead or iron soles.....	15.00
1 pair Wrist Expanders.....	5.00
1 pair Rings and Clamps.....	5.00
1 pair Diving Mittens (rubber or canvas), either style.....	5.00
1 pair Chafing Pants, with adjustable straps.....	4.00
1 Life or Signal Line (100 feet).....	2.00
6 Extra Bolts and Nuts for Helmet (spare).....	3.00
1 pair Extra Couplings (spare).....	2.00
1 yard Rubber Repair Cloth.....	3.00
3 feet Snap Tubing.....	1.80
1 pint can Rubber Cement, for repairs.....	.75
1 Cutting Punch.....	.75
<b>Complete Apparatus.....</b>	<b>\$332.30</b>

	Weight	Dimensions
1 Case.....	360 lbs.	42 in. x 32 in. x 25 in.

\*Bolt Helmet may be substituted at \$25 additional cost.

Any article in above list not desired may be omitted, or additions of any separate parts, as shown on these pages, be made, with corresponding change in cost of outfit.

## HELMET WITH TELEPHONE AND CABLE

Fig. 5821. Helmet, with Telephone and Cable

Particular attention is called to the cup into which the telephone cable leads and which contains both receiver and transmitter, neither of which projects into the Helmet. In the old style telephones the receiver and transmitter were fastened to the inside of the head piece and caused projections against which the head of the diver frequently struck. The telephone is also so arranged that it can be removed from the head piece without the disconnection of a single wire. This is often found necessary where work is to be done in narrow places, cribs, etc., where the carrying of the extra surface connecting line would be dangerous. The hole through which the telephone is removed can be closed with a cap furnished, and Helmet used in the regular way.

Bolt Helmet complete with telephone, batteries, cable, etc.....	\$225.00
Screw Helmet complete with telephone, batteries, cable, etc.....	200.00

## DIVING APPARATUS

Fig. 5831, Bolt

Fig. 5832, Screw

## HELMETS

Are furnished in either Bolt or Screw style with three or four windows and a choice of Regulating Escape Valve or Inside Push Button release. All Helmets are designed to fit without causing unnecessary pressure on the chest. The head pieces are made from a one-piece copper shell to which all fittings are riveted before they are brazed in. The Collars are also made in one piece and the strap which is brazed around the outer edge (to take the bolts for the dress) is also made of one piece, thus making it impossible for the bolts to split the strap from the shoulder form. Every article on the Helmets is thoroughly tested and nothing passed which is not perfect.

Improved Quarter-turn Screw Helmets, 3 lights.....	each	\$100.00
Improved Quarter-turn Screw Helmets, 4 lights.....	each	105.00
Improved Bolt Helmet, 3 lights.....		125.00
Improved Bolt Helmet, 4 lights.....		130.00

Either style furnished with three or four windows and to receive air in head or neck as desired.

## DIVING SHOES

Fig. 5833

No. 5833. Made from best grade leather, with cast iron or lead soles. Per pair.... \$15.00

No. 5834. Made from best grade leather, with cast bronze soles and toe caps. Per pair ..... \$18.00

Fig. 5834

No. 5835. Cast iron Sandals with straps, New York Department Docks and Ferries style. Per pair..... \$8.00

Fig. 5836

No. 5836. Canvas Chafing Shoes worn with sandals or other shoes to protect feet of dress from wear. Per pair ..... \$4.00

Fig. 5835

## DIVING APPARATUS

## EXTRA HELMET FITTINGS

Safety Valve .....	\$ 3.00
Regulating Escape Valve .....	6.00
Springs for Helmet Valves, each .....	.10
Leather Gasket for Neck Screw-Joint .....	1.50
Flanges for securing dress to Helmet Breast Plate, per set (four sections) ...	10.00
Face Plate, screw frame, complete .....	7.50
Leather Gasket for Face Plate .....	.50
Glass for Helmet, round .....	.50
Glass for Helmet, oval .....	.75
Bolts for Breast Plate, each .....	.25
Wing-Nuts for Breast Plate, each .....	.25
Tee Wrench for tightening wing-nuts on Helmet Breast Plate .....	1.25
Spanner Wrench for tightening wing-nuts on neck joint of Bolt Helmet .....	1.00

Fig. 5841. Safety Valve

Fig. 5842. Regulating Escape Valve

## REPAIR PARTS

Fig. 5843

Rubber Cloth for patching Dress or Mittens. Per yard, black .....	\$2.50
White .....	3.00
Cement for patching Dress or Mittens (instructions on can). Per pint .....	.75
Bolts and Nuts for Helmet Collar to replace those worn, broken or lost. Each .....	.25
Couplings for replacing those on hose in case of accident. Per set .....	2.00

Snap Tubing, used for making a water tight joint at the wrist. Usually cut into 2 inch strips. Per foot .....	.60
Improved Urinal, each .....	3.50

Fig. 5844

## CUFF EXPANDERS

Used to stretch rubber cuffs on Diving Dress so as to allow entrance or withdrawal of hand.

Per pair .....\$5.00

Fig. 5845

## HORSE SHOE WEIGHTS

Worn one each on chest and back of diver, suspended by ropes passed over Helmet Collar.

Per pair .....\$15.00

Fig. 5846

## RINGS AND CLAMPS

Per pair .....\$5.00

## DIVING APPARATUS

Fig. 5801. Diving Hose

### SPECIAL DIVING HOSE

- Standard air hose, coupled.  
 Per 50-ft. length.....\$20.00  
 Standard floating air hose, coupled.  
 Per 50-ft. length.....\$50.00

Fig. 5802

### KNIFE BELT WITH FAIRLEADER FOR HOSE

A heavy leather belt with steel knife screwed into a brass case. A ring on belt is designed to allow hose to pass through in carrying same under left arm before connecting to helmet.

- Complete.....\$10.00

### ELECTRIC LIGHT

A 100 candlepower lamp enclosed in a water-tight glass case with vibratory spring and ring for lashing. Complete with 100 feet of best cable and plug for insertion in electric socket.

- Each.....\$60.00  
 (Give voltage of system when ordering.)

Fig. 5803

### CRINOLINE

A cloth covered rattan frame with shoulder straps worn under the diving dress in very deep water. Designed to prevent pressure on the abdomen.

- Each.....\$8.50

Fig. 5804

### HELMET CUSHION

To be worn over shoulders inside the dress to prevent chafing of helmet collar and to ease weight.

- Each.....\$3.00

Fig. 5805

Fig. 5806

### BASKET

Designed to hold complete outfit, except pump, with specially constructed place inside for hose, weights, shoes, etc. Convenient for shipping goods from place to place.

- Each.....\$18.00

## ICE TOOLS

MARKER WITH SWING GUIDE  
Weight, Complete with Case, 145 lbs.

## WIRE ROPE

## NOTES ON THE CONSTRUCTION AND USES OF WIRE ROPE

We stock Wire Rope for every purpose, from the smallest Galvanized Strand, employed principally for guys, to the powerful Bridge Cable. The principal uses of the various kinds of rope are shown in connection with the price of each in this catalog.

Ordinarily, Wire rope is composed of six strands of seven, twelve or nineteen wires each, wound around a hemp center, thus forming ropes of forty-two, seventy-two or 114 wires.

Ropes of seven wires to the strand are most used for standing ropes, guys, ships' rigging, power transmission and a number of similar purposes.

Ropes of twelve wires to the strand are more pliable and are used principally in ships' rigging.

More pliable still is the rope composed of nineteen wires to the strand. This, therefore, is largely employed for hoisting in mines, elevators, etc.

Rope of special construction, having almost any number of wires to the strand, will be made to order to fit any condition for which rope of ordinary construction is not adapted.

To preserve Wire Rope, we recommend Dixon's Waterproof Graphite Grease, which is particularly adapted for gears, wire ropes, elevator guides, and mining and quarrying machinery. It is fresh and salt water proof and will not wash off in acid water. Unsurpassed as a rust preventative. See index.

Wire rope is as flexible as new hemp rope of equal strength. It weighs less and is far more efficient and durable.

A strain of from one-seventh to one-fifth of the breaking strain, shown in connection with the prices in this catalog, may be taken as a safe working load. Standing ropes will sustain a somewhat greater strain.

The largest drums, sheaves and pulleys that are practical should be employed, and high speed should be avoided. Ropes thus properly used will give far better service and last much longer.

When drums are large enough to permit the use of coarse rope, these will prove more durable than the finer, more flexible ropes.

## TRANSMISSION ROPE

The Ropes for Transmission purposes are made of best iron, and consist of a hemp core and six strands, with seven wires to each strand.

A finer Rope of nineteen wires to each strand is made which is sometimes preferable to the other, where the distance is short and it is desirable to use a large rope than is called for by the table; or where the space is limited, and sheaves as large as called for by the table cannot be used. This is because it is more flexible; but extra care must be taken that it does not "tick" against the iron sides of the sheaves, as the wires are so small they wear through quickly if this occurs.

Crucible Cast Steel Ropes can be used just as well, and are preferred by many, as they stretch less.

There is an article of galvanized rope made for guys and ship rigging, but this must not be used for running rope, as the zinc soon wears off and it rusts much faster.

To preserve the ropes, swab them in raw linseed oil, or pour warm coal tar into the grooves of sheaves while running.

## Table of Transmission of Power of Wire Ropes

This table is based upon scientific calculations, careful observations and experience, and can be relied upon when the distance exceeds 100 feet. We also find by experience that it is best to run the Wire Rope Transmissions at the medium number of revolutions indicated in the table, as it makes the best and smoothest running transmission. If more power is needed than is indicated at 80 to 100 revolutions, choose a larger diameter of sheave.

Diameter of Sheave in ft.	Number of Revolutions.	Diameter of Rope.	Horse Power.	Diameter of Sheave in ft.	Number of Revolutions.	Diameter of Rope.	Horse Power.
3	80	$\frac{3}{8}$	3	7	140	$\frac{3}{8}$	35
3	100	$\frac{3}{8}$	3 $\frac{1}{2}$	8	80	$\frac{3}{8}$	26

## WIRE ROPE FOR INCLINED PLANES

For the benefit of those desiring to use Wire Rope on slopes, inclined planes, etc., we annex a table by which the strain produced by any load may be readily ascertained.

This table gives only the strain produced on a rope by a load of one ton of two thousand pounds, an allowance for rolling friction being made an additional allowance for the weight of the rope will have to be made.

Example: For an inclination of 100 feet in 100 feet corresponding to an angle of 45°, a load of 2,000 pounds will produce a strain on the rope of 1,419 pounds and for a load of 9,000 pounds the strain on the rope will be  $1419 \times \frac{9000}{2000} = 6,385 \frac{1}{2}$  pounds.

Elevation in 100 Feet.	Corresponding Angle of Inclination in Degrees.	Strain in lbs. on Rope from a load of 2,000 lbs.	Elevation in 100 Feet.	Corresponding Angle of Inclination in Degrees.	Strain in lbs. on Rope from a load of 2,000 lbs.
5	27°	112	95	43 $\frac{1}{2}$	1,385
10	31 $\frac{1}{2}$	211	100	45	1,419
15	8 $\frac{1}{2}$	308	105	46 $\frac{1}{2}$	1,457
20	11 $\frac{1}{2}$	404	110	47 $\frac{1}{2}$	1,487
25	14 $\frac{1}{2}$	497	115	49	1,516
30	16 $\frac{1}{2}$	586	120	50 $\frac{1}{2}$	1,544
35	19 $\frac{1}{2}$	673	125	51 $\frac{1}{2}$	1,570
40	21 $\frac{1}{2}$	754	130	52 $\frac{1}{2}$	1,592
45	24 $\frac{1}{2}$	832	135	53 $\frac{1}{2}$	1,614
50	26 $\frac{1}{2}$	905	140	54 $\frac{1}{2}$	1,633
55	28 $\frac{1}{2}$	975	145	55 $\frac{1}{2}$	1,653
60	31	1,040	150	56 $\frac{1}{2}$	1,671
65	33 $\frac{1}{2}$	1,100	155	57 $\frac{1}{2}$	1,689
70	35	1,156	160	58	1,703
75	37 $\frac{1}{2}$	1,210	165	58 $\frac{1}{2}$	1,717
80	38 $\frac{1}{2}$	1,260	170	59 $\frac{1}{2}$	1,729
85	40 $\frac{1}{2}$	1,304	175	60 $\frac{1}{2}$	1,742
90	42	1,347			

A factor of safety of five to seven times should be taken; that is, the working load on the rope should only be one-fifth to one-seventh of its breaking strength. As a rule, ropes for shafts should have a factor of safety of five, and on inclined planes, where the wear is much greater the factor of safety should be seven.

## DIRECTIONS FOR SPLICING WIRE ROPE

Wire rope is susceptible to the most perfect splice; a smoother and better splice can be put in a wire rope than in any other kind of rope, for the simple reason that it is made with a view to this purpose. It has just the desired number of strands, namely, six, and a hemp core which provides a place for fastening the ends. It is a plain, simple process, and but the work of an hour for any one to learn.

### TO GET THE LENGTH OF THE ROPE TO BE SPLICED ENDLESS

In most cases the ropes can be applied endless, and in such cases the ropes can be forwardly spliced ready to go on. We can furnish ropes ready spliced by giving us the exact distance from center to center of shaft, and the exact diameters of the wheels on which the rope is to run. This measure can be got best by stretching a wire from shaft to shaft, marking the distance from center to center of shaft and carefully measuring the wire.

In cases where the endless rope cannot be put on, the rope has to be put around the sheaves, hove taut by pulley blocks, and the splice made on the spot. See Fig. 1 in diagram of splices.

**THE NECESSARY TOOLS**—A hammer and sharp cold chisel for cutting of ends off strands; a steel point or marlin spike for opening strands; two slings of tarred rope with sticks (see Fig. 5), for untwisting rope; a pocket knife for cutting the hemp core; a wooden mallet and block.

**FIRST**—Put the rope around the sheaves, and heave it tight with block and fall. (See Fig. 1.) The blocks should be hitched far enough apart so as to give room between to make a 20-ft. splice. A small clamp may be used to prevent the lashing from slipping on the rope where the blocks are hitched. (See Fig. 1.) Next, see that the ropes overlap about 20 feet; about ten feet each way from the center, as shown by the arrow lines in Fig. 1. Next mark the center on both ropes with a piece of chalk, or by tying on a small string. Now proceed to put in the splice, with the blocks remaining taut when it is necessary; but the better way is to remove the blocks, throw off the rope from the sheaves, let it hang loose on the shafts, and proceed with the splice on the ground or floor, or scaffold, as the case may be.

**SECOND**—Unlay the strands of both ends of the rope for a distance of ten feet each, or to the center mark, as shown in Fig. 2. Next, cut off the hemp cores close up, as shown in Fig. 2, and bring the

bunches of strands together so that the opposite strands will interlock regularly with each other. (See Fig. 3.)

**THIRD**—Unlay any strand, A, and follow up with strand 1 of the other end, laying it tightly in open groove made by unwinding A, make twist of the strand agree exactly with the twist of the open groove. Proceed with this until all but twelve inches of 1 are laid in, or until A has become ten feet long. Next, cut off A, leaving an end about twelve inches long.

**FOURTH**—Unlay a strand 4, of the opposite end, and follow with strand D, laying it into the open groove as before and treating this precisely as in the first case. (See Fig. 3.) Next, pursue the same course with B and 2, stopping four feet short of the first set. Next, with 5 and E, stopping as before; then with C and 3; and lastly with 6 and F. The strands are now all laid in with the ends four feet apart, as shown in Fig. 4.

**FIFTH AND LAST**—The ends must now be secured without enlarging the diameter of the rope. Take two rope slings or twisters (See Fig. 5) and fasten them to the rope as shown in Fig. 6; twist them in opposite directions, thus opening the lay of the rope. (See Fig. 6.) Next, with a knife, cut the hemp core about twelve inches on each side. Now straighten the ends, and slip them into the place occupied by the core; then twist the slings back, closing up the rope, taking out any slight inequality with a wooden mallet. Next, shift the slings, and repeat the operation at the other five places, and the splice is made.

If the rope becomes slack, in time, and runs too loose, a piece can be cut out and the rope tightened up. This will require a piece of rope about 40 feet long and two splices, one splice to put on the piece of rope, and the other splice to join the two ends together.

### LABOR OF SPLICING ROPE

**Special NET price** for splicing wire rope, \$0.75 per hour, per man.

The above charge to be in addition to the extra rope used in making splice. **These prices apply only on wire ropes spliced at our store.**

Special price for splicing required elsewhere, depending on the circumstances of each individual case.

Compound logging ropes can be conveniently and properly spliced when using the knot splice.

## CONSTRUCTION OF WIRE ROPE

The cross sections of Wire Rope, as herewith illustrated, comprise the different styles used, dependent upon the nature of the work they are to perform.

**HAULAGE AND STANDING ROPE**

Composed of six strands of 7 wires per strand, laid about a hemp core. Principally used for Mine haulage, Derrick, Guys, Ships' rigging etc.

**HOISTING ROPE**

Composed of six strands of 19 wires per strand laid about a hemp core. Principally used for Mine Hoists, Elevators and all places where pliability and strength are desired.

**EXTRA FLEXIBLE HOISTING ROPE**

Composed of eight strands of 19 wires per strand laid about a hemp core.

**SPECIAL EXTRA FLEXIBLE HOISTING ROPE**

Composed of six strands of 37 wires per strand, laid about a hemp core. Principally used where extreme pliability and great strength are required.

**GALVANIZED STEEL HAWSERS AND RUNNING ROPE**

Composed of six strands of 12 wires per strand, laid about a hemp core. There is likewise an additional hemp core in the center of each strand.

**WIRE TILLER ROPE**

Composed of six individual Ropes, laid about a hemp core—each of these ropes consists of six strands of 7 wires per strand, also laid about hemp cores. Used principally for Hand Rope on Elevators and for Steering Rope for Steamers.

**GALVANIZED STEEL HAWSER**

Composed of six strands of 24 wires per strand, laid about a hemp core. There is also an additional hemp core in the center of each strand.

**CABLE CONSTRUCTION**

Composed of six strands of 19 wires per strand laid about a hemp core. Each strand is composed of 9 large outer wires, 9 small inner wires and one large center wire.

**GALVANIZED STEEL HAWSER**

Composed of six strands of 37 wires per strand, laid about a hemp core.

(Registered Trade Mark)

**The strongest steel rope of equal flexibility and elasticity ever made**

Without a doubt, the severest test to which any wire rope has ever been subjected is on the unloaders in the Canal work at Panama. Whole trains of from sixteen to nineteen cars, packed high with dirt and rock, are unloaded by dragging a special plow from end to end of the train by a single 1½-inch steel cable.

A ninety-ton strain is not unusual. And working conditions generally could hardly be worse.

Yellow Strand, by its strength and ability to stand the roughest usage, unloaded over three times as many dirt trains at Panama as has ever been unloaded previous to introduction of Yellow Strand cables.

Based on the cost of the cable, the unloading cost per train was reduced to such low figures as had never been thought possible.

Wherever extra heavy work is to be done—logging, mining and other heavy hoisting, Yellow Strand proves most economical because most durable.

It is made from highest grade steel wire especially imported for the purpose. Rigid inspection by the manufacturers, by the United States Government for dutiable purposes, and by the mill, positively assures that every single wire will meet the special requirements of 240,000 to 260,000 pounds tensile strength per square inch.

The advanced methods of manufacture careful supervision and final inspection insure perfect uniformity.

The wires, the cores of the strands, the strands, all are round—the only form which permits of bending in every direction with equal strain.

Yellow Strand is especially recommended for use in deep shafts, on inclines, derricks, ballast unloaders and all other places where greatest strength is demanded. For all logging purposes—on skidders, pull boats, etc., the immense strength and elasticity of Yellow Strand place this great wire rope in the peculiar position of being absolutely beyond competition.

**FOR PRICES ON YELLOW STRAND, SEE NEXT PAGE**

# "PATENTSTEEL" ROPE.

(Registered Trade Mark)

The strength of "Patentsteel" is between that of ordinary Crucible Cast Steel and Plough Steel. While not so strong as either Plough Steel or Yellow Strand, it has the advantage of extreme pliability, which must be sacrificed to some extent in making wire rope for extra heavy work.

"Patentsteel" is made from a very fine grade of mild Plough Steel wire, and combines the greatest degree of toughness, ductility and elasticity, together with a very high degree of tensile strength. The greatest deterioration of wire hoisting and running ropes is caused by crystallization of the wires, due to bending back and forth over the drums and sheaves, and not so much from strains to which they may be subjected. The extreme flexibility of "Patentsteel" reduces crystallization to the lowest degree.

In extra heavy work, "Patentsteel," of course, is not so serviceable as Yellow Strand. But when pliability is the prime consideration, i. e., where small sheaves are required "Patentsteel" fills every requirement. We especially recommend "Patentsteel" Wire Rope for quarrymen, contractors, bridge builders, miners; and in any work where good haulage ropes, sand lines, drilling lines and tubing are required.

"Patentsteel" Hoisting Rope is usually made with six strands of nineteen wires each; Haulage or Standing Rope with six seven-wire strands.

2	.62	4 1/2	3.19	30	6	.....

These Ropes are extremely flexible, and are recommended for elevators having a reverse bend.

WE CARRY A COMPLETE STOCK OF WIRE ROPE IN CHICAGO AT ALL TIMES

## SWEDES IRON TILLER ROPES

Tiller Ropes are generally used on steamboats for steering Ropes, and also almost universally as Hand Ropes for starting and stopping Passenger and Freight Elevators.

They are made similar to Hawser Laid Ropes (more properly Cable laid), viz.: six small standing Ropes are laid around a hemp heart, thus forming a Rope of 252 wires. Tiller Ropes are the most flexible of all Ropes.

Diam. in inches	Av. Wt. per Ft.	Price per Ft.	Diam. in inches	Av. Wt. per Ft.	Price per Ft.
1/4	.07	\$0.07 1/2	3/8	.43	\$0.17

5/8	.28	.17	1 1/8	...	.50
3/4	.35	.20	1 1/4	...	.56

## ENGLISH STEEL TILLER ROPE

Tiller Ropes are used for steering ropes on steamers, hand ropes for elevators, and in any place where a smooth and flexible rope is required.

Each strand is composed of 18 wires laid around a hemp center, the strands varying.

Diameter	1 1/4	1 1/2	1	3/4	3/8
Per foot	\$0.37	.30	.27	.23	.16 1/2

## WIRE SASH AND BELL CORD

Iron, Tinned and Galvanized

Trade Number	Diameter	Wt. per Ft. in Lbs.	Brk'g Strength in Lbs.	Price per Foot	
				Swedes Iron	Tinned or Galv'd
26	3/4	.100	2200	\$0.03	\$0.04
27	5/8	.076	1809	.02 1/2	.03 1/2
27 1/2	3/8	.056	1417	.02 1/4	.03
28	1/2	.025	790	.01 3/4	.02 1/2
28 1/2	5/8	.014	510	.01 1/2	.02
29	3/4	.006	262	.01 1/4	.01 1/2

The wire cords specified in the above table are composed of six strands of seven wires each, laid around a cotton heart.

NOTE—When the Iron Rope listed on this page is galvanized, add 10 per cent to list price per foot, and apply GALVANIZED DISCOUNT. When made with WIRE CENTER, add 10 per cent to list price per foot. For ropes of more than 19 wires to the strand and less than 37 wires, unless specially listed herein, apply list for 37 wires.

## GALVANIZED WIRE ROPES

### GALVANIZED WIRE ROPES

1 1/4	75	1400	1.25
1 1/2	55	900	1.15
1 3/4	32	500	1.00
2	20	400	.80

For strands of larger diameter or of a greater  
number of wires than given above, write for prices.  
Galvanized strands made of wire having a tensile  
strength of 60,000 to 350,000 pounds per square inch  
can also be furnished.

### GALVANIZED MAST ARM ROPE

For Arc Lights, etc. Composed of 9 Strands around  
Cotton Center, 4 Wires per Strand

Diameter, Inches	Wt. per Ft. in Lbs.	Approx. Breaking Strain, Lbs	Price per Ft.
3/8	0.158	2,300	\$0.05
1/2	0.109	1,700	.03 1/2
5/8	0.070	1,100	.02 3/4

### Prices upon application

Suspension Bridges have long since become recog-  
nized as the most practical and economical  
style of bridge that can be constructed, and are  
particularly adapted for such places where a light  
roadway or foot bridge is desired.

They possess the greatest strength and durabil-  
ity. The Cables being made of so many wires  
their safety is much greater than that style of  
structure which depends upon the soundness of a  
single piece of iron or steel.

Being suspended between towers there are no  
supporting or intervening piers to be swept away  
by floods or ice gorges.

## BROBAS WIRE ROPE

## YELLOW STRAND—Frederick Patent

It is approximately 25% stronger and equally as flexible as ordinary constructed rope

This form of construction admits of having a larger wire rope core than any other rope construction of a compound character increasing its strength about 25% over that of the ordinary rope construction.

It also avoids cutting and chafing of the strands by reason of the fact that all of the exterior and interior strands in BROBAS rope are so arranged that all tendencies of the strands to chafe and cut on each other are practically eliminated, thereby prolonging the life of rope over that of all other rope of compound type.

On account of the peculiar construction, it is able to withstand sudden shocks, heavy strains, and severe bending without effecting its elasticity up to the ultimate breaking strain of the ordinary constructed wire rope of the same diameter and quality, its actual breaking strain being about 25% greater than the ordinary rope construction.

Another advantageous feature of this construction is that the inner rope core lying in interstices of the outer strands tends in great degree to prevent the wires in outer rope from creeping which is very destructive to wire rope. We recommend it for drag-lines, ballast unloaders and where the rope is subject to sudden shocks, severe strains of both tensile and bending character.

Diam.	Approx. Wt.	Approx. Breaking Strain	Price
$\frac{5}{16}$	.73 $\frac{1}{2}$	23.	\$0.30

.34	$\frac{3}{8} \times 2$ in.	1.19 lbs.	18	3.6	$\frac{3}{4}$ in.

Unless order distinctly specifies to the contrary our rule for thickness applies to size of strand before sewing.

Made of iron or steel as desired. Prices on application.

Steel flat ropes are mostly used for hoisting purposes in very deep shafts as a matter of economy in power and in the initial cost of a hoisting plant.

We also furnish the right and left strands separate together with the sewing wire, thus permitting the sewing of ropes at place of use.

"THE MOST POWERFUL OF THEM ALL."

## JUPITER TRANSMISSION ROPE

Composed of five strands and a hemp center. Nineteen wires to the strand. Heart colored blue

### FERRY BLOCK AND FERRY TRAVELER

All Wrought Iron

The lightest, strongest and most durable Block made; can be taken apart, and parts replaced with ease. Made to fit any size rope.

Price.....each \$6.00

Ferry Traveler, with Single Common Sheaves.

Price.....each \$4.00

### IRON AND STEEL FERRY ROPE

Possesses many advantages over hemp and manila ropes:

1st. Being lighter and more easily stretched across the river and put up.

2nd. Being perfectly round and smaller, the pulley blocks run more rapidly over the ropes, thus doing away with the sudden strain caused by checking (as with a hemp rope).

3rd. When properly put up they last for years, and require but little attention to keep in order.

For a swinging ferry, where the rope lies in the water, it does not rot, nor does it, like hemp, absorb water until it becomes water-logged and clumsy. Hemp rope, thus saturated, will have four times the weight of wire rope placed in the same position; thus in slack water there is no useless expenditure of the force of the current in carrying the boat across when wire rope is used.

Fig. 562

## WIRE ROPE CLIPS AND THIMBLES

### Most Derrick Accidents are Caused by Defective Wire Rope Fastenings

Such accidents can be prevented to a large extent by using the

### GENUINE "CROSBY" CLIP

for all wire rope fastenings. Its massive drop forged steel saddle, curved grooved rope channel, high fingers and powerful U-bolt grip both ropes securely without injuring the strands. A thick armor of galvanizing protects the clip against the weather.

Safest for Guy Ropes.

Safest for Hoisting Lines.

Safest Wherever Wire Ropes are Used.

Cheapest Because Safest.

### CONCRETE FORMS

In circular concrete reservoirs, tanks, bridge arches, water towers, etc., continuous and uniformly strong reinforcing is absolutely necessary. There can be no continuous reinforcing without a dependable splice—and "dependable" means drop forged steel. The Genuine Crosby Clip fills every requirement.

### LIST PRICES

Diam. Rope inches	Price each	Diam. Rope inches	Price each
1/4	\$0.35	1 1/4	\$1.10

## TOW LINES, SWITCHING ROPES AND PUSH POLES

### "BASLINE" AUTOWLINE

One-quarter inch Yellow Strand Powersteel Wire Rope with Patented Saffle Hooks on each end especially constructed for towing autos.

This wonderful little towing line is manufactured of highest grade steel,  $\frac{1}{4}$  inch diameter Yellow Strand Powersteel Wire Rope, about 25 feet long over all. This "over all" length includes two  $\frac{1}{2}$  inch manila rope slings, which are joined to each end.

Weight,  $4\frac{1}{2}$  lbs.—goes under a cushion.  
Price each.....\$5.00

Fig. 644A. Autoline

Fig. 644B. Truckline

### POWERSTEEL TRUCKLINE

#### For Heavy Towing

Powersteel Truckline is made of  $\frac{1}{2}$  inch Yellow Strand Powersteel Wire Rope, and is 18 feet long. It coils up flat and takes up practically no room. Its breaking strength is about 12 tons. It never fails in an emergency.

Price each.....\$9.00

### "POWERSTEEL" LOCOMOTIVE SWITCHING ROPES

Fig. 644C

### CRUCIBLE CAST STEEL WIRE SWITCHING ROPES

Fig. 644D

The single pattern has hook and thimble on one end and thimble and link in other end.

The double pattern has hook, thimble and link in one end and thimble and two links in other end.

The Rope is not included in the list prices below, which cover only the fittings, spliced in.

Diam. inches	Price each	Breaking Strain in Tons of 2000 lbs.	Diam. of Manila Rope of Equal Strength inches	Weight of Wire Switch Rope 30 feet Complete lbs.	Weight of Manila Switch Rope 30 feet Complete lbs.
1	\$23.70	50	4	85	270
$1\frac{1}{8}$	29.00	63	$4\frac{1}{4}$	115	315
$1\frac{1}{4}$	33.40	76	$4\frac{1}{2}$	135	365

Ballast Unloader Ropes and Wrecking Ropes made according to specifications and orders promptly executed.

## CHAIN

Owing to the almost daily fluctuations in market on chain we are unable to insert list prices. Our stocks, however, are always complete and we will be pleased to quote the lowest possible price on request.

## "CRANE" OR "BBB" CHAIN

Tested and certificate furnished. This Chain is made of refined and re-rolled iron, that is very tough and fibrous, and will stand a tensile strain of 53800 lbs. to the square inch. It is welded with special care and dollied. This is a chain that may be depended upon where strength and durability are required.

## "DREDGE" CHAIN

Tested and certificate furnished. This is the best Chain made. The iron used is special Dredge quality, refined and re-rolled. It is tough and fibrous, and made hard to prevent wearing rapidly. This iron will stand a tensile strain of 54500 lbs. to the square inch. The welding of our Dredge quality Chain is entrusted only to the most experienced workmen, and none but those thoroughly competent and reliable are permitted to make this grade of chain. It is carefully inspected both before and after testing.

## SPECIAL STEEL LOGGING CHAIN

This Special Steel Chain is the result of a long series of experiments to obtain the greatest possible strength. Each piece is tested before it is shipped from the mill, and we recommend it as especially adapted to log loading and all other purposes where the highest quality chain is required.

## CHAIN SLINGS

Made of any grade and size desired. We recommend our Dredge as the most desirable. Fitted with any style Hooks or Rings. The actual breaking strain is twice the test.

The safe working load two thirds the test.

For table of tests, see index.

## RAILROAD SWITCH, OR WRECKING CHAIN

Grab Hook on One End, Long Link on the Other End

## THE KEYSTONE CONNECTING LINK

For connecting new or repairing broken chains of all kinds—is composed of two corresponding halves centrally pivoted on the same axis. As shown by the illustration herewith, the inner flat face of each member is pivoted with a projecting lug and recess, so that when closed and in use they mutually interlock, and by abutting against each other, lateral displacement of the two halves, and their consequent spreading or parting—is rendered impossible. The Keystone Link is Drop Forged from an especially tough grade of bar steel, is the only one so made, and must not be confused with similar devices which are simply malleable iron castings.

\*Metallic packing on steam piston rods includes this packing on partition plate stuffing box.

Metallic packing is not necessary on steam valve stems; these stuffing boxes being subject to exhaust pressures only.

The Cook's and Morris metallic packing is of the split case type.

The Tripp Packing is made with one piece follower rings and requires dismantling compressor for applying or removing.

FOR PIPE, FITTINGS, RECEIVERS AND VALVES, SEE INDEX

## GARDNER HORIZONTAL AIR COMPRESSORS

Large bearing surfaces and shafts.  
Extra heavy fly wheels.  
Automatic Speed and Pressure Regulator and sub-base with oil rim cast all around—  
with all steam-driven machines

The 40, 45 and 64 H. P. have band wheels for two belts.  
Smaller have fly and hand wheel for one belt

**Equipment**—With each of the above machines are furnished an unloading device, stationary oiling device, with a liberal quantity of oilers and wipers for all bearings and journals and full set of wrenches. The unloading device consists of an air governor placed in the inlet pipe. When the maximum pressure is attained, the unloader shuts off the air supply and the compressor runs without load, except that power necessary to overcome the friction of the machine. When the receiver pressure falls, the unloader opens, admitting the air and the compressor resumes its work of compression. The pressure in the receiver is thus kept constant, and there is no waste of power. It is entirely automatic in its action.

FOR OTHER TYPES OF AIR COMPRESSORS, SEE INDEX

## THE GARDNER-RIX VERTICAL HIGH SPEED COMPRESSOR

**No. 1 G R I—Gardner-Rix Single Cylinder  
Class G Compressor**

**No. 2 G R I—Gardner-Rix Duplex Class H  
Compressor with Tank**

An original type of high speed vertical air compressor of rather unique design, simple, practical and economical. It is composed of but few parts, has no outside adjustments, is very simple and requires but little attention to keep it in good working condition. The entire freedom from intricate mechanisms requiring delicate adjustments, makes it an especially valuable compressor for uses in places where best care and attention are not always available. You can safely put it into the hands of the most inexperienced without danger of its efficiency becoming impaired through inattention or neglect. It demands but common sense attention that can be given by any one, though he may not have mechanical experience.

### PRICE LIST

Bore and Stroke	Type	List Price	Extra for Unloader	Extra for Sub-Base	Extra for Loose Pulley	Extra for Cir. Pump Attach.
3 x 3 1/2	G	\$ 87.00	\$17.50	\$ 3.50	\$12.00	\$19.00
4 1/2 x 4 1/2	G	144.00	19.00	5.50	21.00	21.00
6 x 6	G	250.00	31.50	10.50	30.00	24.00
8 x 6	G	350.00	35.00	18.00	44.00	24.00
4 1/2 x 4 1/2	H	270.00	19.00	9.00	21.00	21.00
6 x 6	H	410.00	44.00	16.00	35.00	24.00
8 x 6	H	610.00	49.00	21.00	52.00	24.00

Regular Compressor is furnished with tight pulley of the size indicated in the table above, and with the necessary wrenches. The unloader is not part of the regular equipment, and should be specified if desired. It is necessary where a constant pressure is required.

Loose Pulley can be furnished if desired. It makes a convenient arrangement for starting and stopping compressor where driven from shafting continually in motion.

Class "G" designates the single cylinder compressor suited for pressures as indicated in the above table.

Class "H" designates the double cylinder or duplex compressor for pressures as above.

## PORTABLE AIR COMPRESSORS

The No. 1 Portable Compressor Outfit is the result of many years of experiment and designing on the part of the manufacturers. It is a light, well-built, evenly balanced compressor that can be used to operate all of the smaller-sized tools for carving and lettering stone, drilling steel and iron, paint spraying, etc.

The engine and compressor cylinders are mounted on one common frame. The pistons are actuated by an evenly balanced opposed double throw crank. This means an even balance and perfectly smooth operation, with scarcely any vibration. This gives long life to the machinery and prevents the pipe connections from becoming loose and leaky.

By this construction all the power is transferred directly from the engine to the compressor. There are no belts, chains, gears or couplings.

The engine has variable speed control and being of the four-cycle heavy duty type with hit and miss governor, is very economical. In fact this outfit will run an ordinary tool all day on one gallon of fuel.

The compressor is of the disc valve type and entirely automatic in its regulation. It is water-cooled, the same as the engine.

The low construction, steel truck and broad wheels make the entire machine very easy to move about. The tank and all fittings are protected and are so neatly connected that every possible chance for parts becoming loose or worn has been removed. All machines are fully guaranteed.

## SPECIFICATIONS

**Engine**—4 cycle, horizontal, water cooled, 4-inch bore, 4-inch stroke,  $2\frac{1}{2}$  H. P.

**Compressor**—single acting, water cooled  $3\frac{1}{2}$ -inch bore, 4-inch stroke, 14 cu. ft. of air.

**Capacity**—1, 2 or 3 tools.

**Cost to run**— $1\frac{1}{2}$ c per hour per tool.

**Weight**—750 lbs.

**Automatic Air Regulation.**

**Speed**—250-650 rev. per minute.

**Mounted on all-metal truck.**

**Fuel**—Gas or gasoline preferred.

**Length**—5 feet.

**Width**—2 feet 6 inches.

**Height**—2 feet 6 inches.

**Air tank**—12 inches by 30.

**Pressure**—from 30-100 lbs.

**Guaranteed for 1 year.**

**Fully equipped, with drip cocks, safety valve and pressure gauge.**

List Price .....\$250.00

## AIR RECEIVERS

An air receiver is an important part of a compressed air equipment. The sizes below are recommended for use in connection with compressors. Nos. 00 and 0 are seamless tanks, tinned inside and outside and guaranteed strong enough to withstand pressure of 200 lbs. per square inch. Other sizes are made of the best 60,000 t. s. steel. They are tested to 165 lbs. water pressure and guaranteed safe and tight under 110 working air pressure. **With each tank are included the following:** Safety valve, pressure gauge and drain cock.

No. of Size.....	00	0	1	2	3	4	5	6
Diameter in inches.....	12	18	18	24	30	36	36	42

Larger Sizes and for Heavier Pressures on Application

## BINKS CLEANALL AIR GUN

FOR COMPRESSED AIR

This device is used in foundries, machine shops, mills, garages, etc., wherever compressed air is used. The air is under constant control of the operator at all times and the desired volume can be obtained by simply pressing button. It is absolutely tight and there is no leakage of air when not in use. Indispensable for blowing dust from motors, machinery, automobile cushions, etc. Used to equal advantage by bench and machine hands for removing chips and filings where it is impossible to reach with a brush. For cleaning molds in foundries it is decidedly more convenient and practical than the hand bellows.

## UNDERGROUND GASOLINE STORAGE OUTFIT

Fig. 711A

Listed and approved by the National Board of Fire Underwriters.

Constructed of the very best material obtainable for the purpose intended. All seams are butted and welded by the Oxy-Acetylene process, which makes them 50 per cent stronger than the riveted tank. Dropping and rough handling in transit frequently springs riveted tanks, which causes them to leak.

These tanks are 90 per cent stronger than a soldered tank.

All tanks are thoroughly galvanized inside and out, and painted with rust-proof paint. The tanks have one 2 inch flange opening, one  $\frac{3}{4}$  inch flange opening, and one 1 inch opening. The 2 inch opening is for the filler pipe, the  $\frac{3}{4}$  inch is for the suction pipe, and the 1 inch opening is for vent when needed.

Pumps for private garage use embody many good points in design, which are featured in expensive high-grade pumps.

They are built of rust-proof materials throughout. There are no intricate parts to get out of order and no fine adjustments to bother with. All valves are of heavy brass and the cylinder is a seamless brass tube.

## COMPLETE OUTFIT CONSISTS OF

Heavy galvanized iron tank.

Pump.

Filler pipe, 2 inches in diameter by 24 inches long.

Suction pipe, which is 10 feet  $\frac{3}{4}$  inch galvanized pipe.

Connections for suction pipe, 1- $\frac{1}{2}$  inch elbow, 1- $\frac{1}{2}$  inch street elbow and one piece  $\frac{3}{4}$  inch pipe 30 inches long.

The following sizes and gauges kept in stock, which can be furnished with Model H Pumps:

60 gallon, 18 gauge steel.....	\$34.00	110 gallon, 18 gauge steel.....	\$40.00
60 gallon, 16 gauge steel.....	36.00	110 gallon, 16 gauge steel.....	43.80
110 gallon, 14 gauge steel.....	\$46.00		

Prices on other sizes furnished promptly upon request.

All outfits comply with National Board of Fire Underwriters' Rulings.

## INSTRUCTIONS FOR INSTALLATION

Tank must be buried 2 $\frac{1}{2}$  feet under the surface,  $\frac{3}{4}$  inch pipe is used for connecting tank and pump; 1-inch pipe is used for vent when vent is required. Tank equipped with extra flange for vent on request. Filler pipe made of 2 inch pipe with heavy cap with locking device and fine mesh strainer. When installing, there should be a drop of 1 inch to 10 feet on the connecting pipe; fall being from pump to tank. All joints should be made up with a mixture of litharge and glycerine.

## MODEL "H" LEVER HANDLED GASOLINE PUMP

This Pump has been examined, tested by the National Board of Fire Underwriters for the U. S. and listed among the permitted systems. This means no trouble from an insurance standpoint.

This pump is made of rust-proof material throughout. Like our Model S Pump, there are no intricate parts or adjustments to get out of order. All valves are made of very heavy brass and the cylinder of the pump is made of seamless brass tubing.

It will pump approximately one quart to a stroke, although it is not a measuring pump. Especially adapted for use in private garages or small public garages.

List price, each.....\$24.00

Fig. 711B, Model H

## GARAGE SOAP ECONOMIZER

Reduces soap consumption ONE-HALF, saves all waste and prevents THEFT.

It works on the same principle that the common soap shaker does in washing dishes.

Simply fill the perforated pail with four to six pounds of soap, and suspend, by cord, chain or other method, in hot water washing tank or barrel.

Very little agitation is required, as the numerous perforations allow perfect circulation of water.

Made of heavy galvanized perforated steel.

No. 30. Capacity, 6 $\frac{1}{2}$  lbs.; diameter, 6 $\frac{1}{4}$  inches; height, 8 inches....each \$1.75

## CHALLENGE GASOLINE AND KEROSENE ENGINES

Challenge Engines have been on the market for the past twenty years and have built up a world wide reputation for satisfactory service, strength and durability that makes them easy to sell, and when sold, stay sold. They are made in sizes from 1 to 16 H. P., Stationary or Portable for operating on Gasoline or Kerosene and can be furnished with built in magnetos, which eliminate all batteries, make starting easy and after started run perfectly with little or no attention.

The design of the Challenge is very compact and simple, it having only as many working parts as are absolutely necessary to make a perfect working machine and made strong and durable to prevent breakages.

The factory where Challenge Engines are made is equipped with up-to-date machinery and all parts of the engine are made on templates, therefore, are interchangeable, and no trouble will be experienced in getting repairs at any time in the future should they be necessary.

On the smaller sized engines, 1 to 6 H. P., the base is in two parts, which permits the engines being used either as a portable or stationary. These engines may be set on a concrete foundation and if at any time it is desired to mount it portable, it can be removed from the sub-base without disturbing the connections to foundation. The fuel tank is located in base which makes the outfit very compact.

In the 8, 10, 12 and 16 H. P. sizes, the engines are fitted with a circulating pump. It is of the same design as the open water jacket engines, with the exception of the cylinder. This cylinder is provided with a large water jacket through which the water is forced by means of a rotary pump, operated by a belt from the main shaft. This furnishes a constant flow entirely surrounding the cylinder and makes a perfect cooling system for any size engine.

The pump is constructed without valves or checks. There is nothing about it to wear out and it is always ready for action. The level of the water in the reservoir is lower than the cylinder, consequently when the engine stops running the cylinder is entirely emptied. This method of cooling affords absolute protection against freezing and bursting the water jacket. All water may be drained off by turning a stop cock under the pump.

## EQUIPMENT

On all engines from 1 to 6 H. P., each engine is sent out with a complete equipment consisting of a battery and coil, starting crank, two wrenches and oil can. Upon its arrival all you have to do is to fill fuel and water tank and oil cups and the engine is ready to start.

On engines of 8, 10, 12 and 16 H. P., each engine is sent out with a good reliable Oscillating magneto attached, two wrenches and oil can. All you have to do is to fill the fuel and water tanks and oil cups and it is ready to run.

Size	Weight, lbs.	Price with Battery	Price with Magneto	Extra for Kerosene Attachment

16 H. P., Stationary .....	4,400	.....	960.00	20.00
16 H. P., Horse Portable .....	4,700	.....	.....	.....

All Horse Portable engines are provided with friction Clutch Pulley.

We can furnish larger engines, either gasoline or kerosene. Prices on application.

## DOUBLE FRICTION DRUM ELECTRIC HOIST

### "STANDARD" DOUBLE FRICTION DRUM ELECTRIC HOIST

The construction of our Double Drum Electric Hoists is such that their operation is like that of a regular Double Drum Hoisting Engine and therefore familiar to any hoisting engineer. They are self-contained and furnished complete as shown, ready for attachment of feed wires.

The Patent Controller Operating Mechanism, furnished with hoists having two or more drums, facilitates the operation of the controller and prevents injury through careless handling, saving time and annoyance, and reducing the cost of maintenance. The operating hand lever is clamped about a horizontal shaft, like the throttle lever of a hoisting engine, and arranged to rotate the controller cylinder by means of a pair of inclosed bevel gears and a flexible connection permitting a step-by-step movement which prevents burning of the contact fingers.

In an Electric Hoist the Motor offers practically no resistance to backing down of the load after the current is shut off. For preventing such backing down of the load and thus to secure the same ease and safety of operation as is afforded by a steam hoist, we furnish the intermediate shaft of our electric hoists having two or more drums, with a Patent Automatic Brake.

This Automatic Brake consists simply of a wood-lined band encircling a brake wheel keyed to one of the shafts of the hoisting machine. The band is fitted with a right and left adjusting nut, and has its ends pivoted to a brake rocker loosely mounted on a pin projecting from the frame of the machine. The ends of the band are pivoted to the rocker at unequal distances from the center of the pin, and thus produce a differential action whereby forward rotation of the brake wheel acts to turn the rocker in the direction to lengthen the band and release the brake, while backward rotation acts to turn the rocker in the direction to shorten the band and cause it to grip the brake wheel and apply the brake.

The brake is reliable and effective, offers very slight resistance to forward rotation, and automatically and positively prevents backward turning.

No.	Horse Power	Hoisting Capacity		Drum		Diameter Flanges inches	Approximate Shipping Weight	List Price Complete
		On Single Rope lbs.	Speed, ft. per Minute	Diameter inches	Length inches			
101	10	1,800	150	12	14	21	3,500	\$1,600.00
102	25	4,000	170	14	18	25	6,700	2,304.00

104	75	10,000	220	16	24	35	13,000	4,040.00

We can furnish any style or horse power electric hoists, and will be glad to quote prices on receipt of specifications.

## DOUBLE-CYLINDER, DOUBLE-FRICTION DRUM HOISTING ENGINE WITH BOILER

We can also furnish this Hoist in single and three drum type, also with slewing attachments, or any of the Hoists listed below without boilers.

Fig. 115

This engraving represents our Improved Double-Cylinder, Double-Friction Drum Hoisting Engine, with Boiler, which is specially adapted for bridge building, pile driving, quarries, railroad work, general derrick work and hoisting purposes.

Each drum is equipped with ratchet and pawl, turned winch head and a powerful foot brake. With the drums equipped as above, it is possible to hold one drum with the load suspended, using the other drum for hoisting or lowering the boom, or it is possible to operate either drum or winch head independently.

For pile driving, one drum is used for placing the pile and the other for operating the hammer.

The crossheads are of the hanging locomotive type, with extra large wearing surfaces, and are fitted with bronze gibs.

Some features of this Hoist are, drums bushed with bronze bushings, double V friction, cut gears, steel pinion, and Boiler constructed for 125 pounds working pressure.

## DOUBLE-CYLINDER, FRICTION-DRUM HOISTING ENGINE, WITHOUT BOILER

Fig. 118

The above engraving shows our Double Cylinder, Single Friction Drum Hoisting Engine, without Boiler, and with a turned winch head attached to the end of the drum shaft.

The frames of this Engine are made in sections, securely bolted together, and all parts well secured by dowel pins. This feature permits sectionalizing for mountain transportation or placing in mines. The drum is equipped with a powerful foot brake and bronze bushings. The friction is the double V type. The gear and pinion are cut, and the pinion is steel. The Engine will operate successfully on air or steam.

This Engine is especially adapted for general hoisting purposes and is being used extensively by contractors where but one drum is required and the air or steam is supplied from a central plant.

Being very compact, it occupies little space, which makes it very desirable for use on board ship or for mounting on dock wheels. When mounted it is easily moved from place to place for the convenient handling of the cargo.

We can also furnish this Hoist with Reversible Link Motion Attachments

## DOUBLE-CYLINDER, REVERSIBLE CONTRACTOR'S HOISTING ENGINE

Designed especially for the building contractor, and is used for running either single or double material elevators, or for running a pump or circular saw. It successfully fills the many and various requirements encountered in the erection of buildings.

Having Double Cylinders and Cranks set at an angle of 90 degrees, there is no sticking on centers, and it is always ready to start with a strong pull.

The Elevator Sheave is operated by a clutch on the drum shaft. When the sheave is thrown out it becomes independent, and the friction drum is then free for hoisting purposes. The sheave is equipped with a brake, making possible the stopping and holding the elevator at any particular point.

All Working Levers are within easy reach of the operator.

A 30 inch Belt Pulley or Winch Head can be furnished in place of the sheave.

The Hoisting Drum is bushed with bronze bushings and has double V friction. The Pinion is steel, and the Gear and Pinion are cut.

We Can Also Furnish This Hoist with Double-Drum in 10, 15 and 25 H. P.

## VERTICAL ENGINES

Fig. S61. Class F

Fig. S62. Class B

Fig. S63. Class D

## CLASS "F" VERTICAL ENGINE

The Class "F" Vertical Engine is well made throughout, the rods being of steel, the crank shaft of solid forged steel, and the brasses of phosphor-bronze. It is very popular with the manufacturers of cement and concrete mixers, the majority of the mixers in the country being equipped with this Engine.

A critical steam test of every Engine is made before it leaves our factory, and the necessary adjustments carefully made, so that the Engine is ready to run the moment it is placed in position and given steam.

The fittings and fixtures comprise: Fly Wheel, Pulley, Oil Cups, Sight Feed Lubricator, Throttle Valve and Nipples, Governor and Governor Belt. Foundation Bolts and Washers will be furnished, when ordered, at an extra cost. See index.

See next page for description and specifications on Class B and D Engines.

## VERTICAL ENGINES—Continued

## CLASS "B" VERTICAL ENGINE

Our Disc Crank Vertical Engine, is desirable for general purposes where small powers are required. They are very strong, heavy in construction and well proportioned, and will stand continuous hard service. A critical steam test of every Engine is made before it leaves the factory, and the necessary adjustments carefully made, so that the Engine is ready to run the moment it is placed in position and given steam.

The fittings are: Oil Cups, Sight-feed Lubricator, Throttle Valve and Nipples, Governor and Governor Belt. Foundation Bolts and Washers will be furnished, when ordered, at an extra cost. See index.

Above 20 horse power, these Engines are equipped with Center Oiler for the Crank Pin.

## CLASS "D" VERTICAL ENGINE

The Class "D" Vertical Engine is our center crank, inclosed type. All working parts being inclosed by means of dust proof plates, makes the Engine very desirable for operating cement mixing machinery, and in all places where a dust proof Engine is preferable.

The covering plates are so attached that they may easily be removed for inspection or adjustment of the Engine.

We call attention to the following features: Crank Shaft of solid forged steel; Eccentric keyed to crank shaft; extra long Journals set low to prevent vibrations.

A critical steam test of every Engine is made before it leaves the works, and the necessary adjustments carefully made, so that the Engine is ready to run as soon as placed in position and given steam.

The fittings and fixtures comprise: Fly Wheel, Pulley, Oil Cups, Sight Feed Lubricator Throttle Valve and Nipples, Governor and Governor Belt. Foundation Bolts and Washers will be furnished, when ordered, at an extra cost. See index.

## HORIZONTAL ENGINES

These Engines are of the self-contained center-crank type, and are well made throughout. The Crank Shaft is cut from a solid forging of the best quality of steel, and is equipped with cast-iron counterbalancing discs, securely fastened. The Piston is provided with self-adjusting packing rings. The Connecting Rod is equipped with phosphor-bronze boxes at each end. The cross-head end is the solid-end type, while the crank-pin end is of the strap type. Both brasses are adjusted by means of adjusting wedges. All parts are of easy access in case of adjustment or repairs.

The Fly Wheel and Pulley are turned crown-face, making it possible to belt from either.

A critical steam test of each Engine is made before it leaves the factory, and the necessary adjustments carefully made, so that the Engine is ready to run the moment it is placed in position and given steam.

The fittings and fixtures comprise: Fly Wheel, Pulley, Sub-base, Oil Cups, Sight Feed Lubricator, Throttle Valve and Nipples and Governor Belt. Foundation Bolts and Washers will be furnished when ordered, at extra cost. See Index.

## CLASS "B" HORIZONTAL ENGINE

The Class "B" Horizontal Engine is the Self-contained, Disc-crank type. Being complete on a single cast-iron base prevents any of its working parts from becoming out of line. This Engine is strong and heavy, with the metal properly distributed.

The Piston is provided with self-adjusting packing rings. All Rods are of steel, all wearing surfaces are large, and suitable means have been provided for easy adjustment.

The 25 and 35 horse-powers are equipped with balance Valve and Center Oilier.

A critical steam test is made of every Engine before it leaves the factory, and the necessary adjustments carefully made so that the Engine is ready to run the moment it is placed in position and given steam.

The fittings are Oil Cups, Sight-feed Lubricator, Throttle Valve and Nipples, Governor and Governor Belt. Foundation Bolts and Washers will be furnished, when ordered, at an extra cost. See index.

We recommend this Engine for heavy and continuous service.

The Fly Wheel is turned crown face, making it suitable for belt. There is sufficient shaft extension beyond the out-board bearing for attaching a Pulley, if desired.

## OPEN BOTTOM PORTABLE BOILER

CLASS "B"

This Boiler is made of homogeneous Flange steel plate of 60,000 pounds tensile strength, and under the same careful supervision as all boilers on our list. The Furnace has a three inch water space on all sides of the fire and is adapted for burning wood or coal. The Door Mouth is formed by flanging the inside plate outward to meet the flange of the outside plate, the two flanges are riveted together and caulked. This construction removes the rivets and caulked edge from direct contact with the fire, and avoids the trouble experienced where the door opening is surrounded by a solid or box ring with rivet-heads projecting into the furnace.

The longitudinal seam in the shell of the boiler is double riveted, the furnace is supplied with a fusible plug in the crown sheet, and the boiler is thoroughly well made throughout.

## FIXTURES

With a Boiler ordered "complete" the following fixtures are sent: Check Valve, Grates, Water Gauge, Safety Valve, Stop Valve, Steam Gauge, Gauge Cocks, Blow-off Valve, Smoke Stack and Guys.

All steam openings 2 inches and larger are reinforced. All smoke stacks, up to and including 28 inches diameter, are No. 16 gauge, and larger diameters of No. 14, unless otherwise ordered; if heavier gauge is required, a proportionate charge will be made.

Every boiler is tested and inspected, before shipment, by a responsible Steam Boiler Inspection and Insurance Company, at 150 pounds hydrostatic pressure per square inch, and the purchaser can have a certificate of inspection and a policy of insurance for one year issued by the Insurance Company. This policy is payable to the purchaser, and will be in force and valid wherever the boiler is located.

**Every Boiler is Thoroughly Tested Under Steam Before it Leaves the Shops**

# HORIZONTAL BOILERS

This engraving illustrates our Standard Horizontal Tubular Boiler with Half-Arch Front Setting. It is built of open-hearth, homogeneous flange steel plate, guaranteed by the makers to turn down double (cold) without fracture. All Boilers above 36 inches in diameter have the dome flange double-riveted. The longitudinal seams are double-riveted, being lap-joint construction, with the exception of the 60 and 66 inch diameter Boilers, which are butt-joint. All Boilers above 12 feet in length are built in three rings.

The tubes are the best lap-weld quality, and are set in vertical and horizontal rows, permitting the best circulation within the Boiler. The heads are thoroughly braced with weldless steel braces of the most approved form.

All Boilers are tested and made thoroughly tight under 150 pounds hydrostatic pressure, and will pass for 100 pounds working pressure in districts where a special boiler ordinance is not in effect.

A certificate of test and inspection, issued by the Fidelity and Casualty Company, is furnished when desired. Insurance policy will be furnished, if ordered, at an extra cost.

The fittings and fixtures comprise: Britchen, front with doors and liners, grates, grate-bearer, rear-arch bars, rear ash door and frame, boiler stand, safety valve, steam gauge, water gauge, water column attached, gauge cocks, blow-off cock, check valve, stock cock, whistle and pipe, smoke stack and gully rods four times the length of the stack. **Injector will be furnished, when ordered, at an extra cost.**

These Boilers are regularly furnished with steel tubes, but can be furnished with charcoal iron tubes, if desired, at an extra cost. See index.

## HORIZONTAL BOILERS

This engraving illustrates our Water Front and Open Bottom Locomotive Type Boiler on Skids. Many years of experience have proven this to be the best type of portable boiler. With the open bottom there is no dead water space below the grate surface, such as exists in the water-bottom boilers, to soon fill up with mud and sediment. The open bottom permits the free discharge and easy removal of ashes, thus providing sufficient draft for all fuels. This is not the case with the water bottom type of boiler, as the ash pit door opening, through which the ashes must be removed, is comparatively small, making difficult the removal of the ashes, and impairing the draft. Only the poorer grades of fuel are to be had in many sections, which means that free draft must be had to secure entirely satisfactory steaming.

The Water Front is superior to the cast iron front furnished by many, as it affords additional heating surface in the fire box, and does not crack and warp as is often the case with the latter type. We can, therefore, recommend the Water Front and Open Bottom Boiler as being superior to the water bottom boiler with cast iron front.

These Boilers are made of open hearth, homogeneous flange steel plates, being provided with stay bolts of the best quality of refined iron, and thoroughly braced and stayed throughout. Six hand holes are supplied, one in the front head above the crown sheet, four in the bottom of the water leg, and one in the rear head under the tubes.

The 50 and 60 horse powers also have a man hole in the rear head above the tubes. All Boilers are tested and made thoroughly tight under 150 pounds hydrostatic pressure, and will pass for 100 pounds working pressure in districts where a special boiler ordinance is not in effect. A certificate of test and inspection, issued by the Fidelity & Casualty Company, is furnished when desired. Insurance policy will be furnished, if ordered, at an extra cost.

The fittings and fixtures comprise grates, water column attached with gauge cocks, water gauge steam gauge, safety valve, check valve, stop cock, whistle, blow-off valve, stack and guy rods (four times the length of the stack). Injector will be furnished, when ordered, at an extra cost. See index.

## VERTICAL BOILERS

Fig. 90A. Standard Boiler

Fig. 90B. Standard  
Round Base with Iron Bottom

Fig. 91. Class E Boiler

This type of Boiler is especially desirable where space is limited. Being easily handled and a quick steamer, it is very popular with Contractors for hoisting and pumping. It is also extensively used in small manufacturing plants.

Particular attention is called to our round base, equipped with wrought-iron bottom. This bottom is securely fastened, and has an air-space between the bottom of the base and the boiler. By this means, the use of brick may be obviated when using the Boiler on a wooden floor, with perfect safety.

The type "E" is our standard "Full-Length-Tube" Vertical Boiler, built with shell extended, thereby obviating the use of separate base, thus making it desirable when space is limited. Many users prefer this type of Boiler, since the separate base is not required. This fact makes it exceptionally popular with the Contractors and the Manufacturers of Cement and Concrete Mixers and on all machinery where it is necessary to mount a Boiler. The necessary angles for fastening the Boiler are supplied to suit the machine on which the Boiler is to be mounted.

They are made of open-hearth, homogeneous, flange steel plates having a tensile strain of 55,000 pounds per square inch of section. All sizes above 20 inches are well braced by means of stay bolts, and all Boilers 30 inches and upward in diameter have the vertical seams double-riveted. From No. 6 to No. 13 inclusive, the shells are made of a single sheet. The heads are drilled.

All Boilers are tested and made thoroughly tight under hydrostatic pressure of 150 pounds, and will pass for 100 pounds working pressure in districts where a special boiler ordinance is not in effect. We are also equipped to build them in accordance with the various local boiler ordinances in effect. A certificate of test and inspection, issued by the Fidelity and Casualty Company, is furnished when desired. Insurance policy will be furnished, if ordered, at an extra cost.

Boilers 20 inches to 30 inches in diameter have two, and the larger sizes three, hand-holes around the water-leg and the same number above the crown sheet. In Boilers 20 inches in diameter the water-space around the fire-box is 1½ inches wide; in the 24 inches in diameter, 2 inches; and in all other sizes, 2½ inches wide.

The fixtures comprise base, grate, hood, steam gauge, glass water gauge, gauge cocks, pop safety valve, blow-off valve, check and stop cock. Injectors and stacks will be furnished, when ordered, at an extra price. See index. An extra charge is made for round base with iron bottom.

On the opposite page will be found tables of dimensions and specifications on the above "Full-Length-Tube" Vertical Boilers.

20-inch Boilers are equipped with Lever Safety Valves and Round Bases without Bottom. Round Bases with Wrought-Iron Bottom are not furnished with 20-inch Boilers. There will be a slight additional charge for Round Base with Wrought-Iron Bottom. Boilers Nos. 20, 21 and 22 have flat iron plate bases to set on brick walls.

## RECOMMENDATIONS

Nos. 750 and 751 for ordinary service.  
Nos. 752 and 753 to comply with the rules issued June 30, 1914, by the Steamboat Inspection Service of the United States Government.

Nos. 752 and 753 to comply with the various State and City Laws requiring Fusible Plugs with extensions.

Plugs should be installed in direct passage of the fire or gases with small end of the Banca Tin exposed to the fire or gases. These Plugs are NOT to be used inside a steam drum, etc., where the temperature of the steam is used as a fusing agent.

## STAMPING

Nos. 750 and 751 are stamped as shown.

Nos. 752 and 753 are stamped as shown and in addition have the heat number stamped in compliance with the Steamboat Inspection Service of the United States Government.

## CONSTRUCTION

The No. 750 is made regular length and constructed for outside insertion. The No. 751 is made regular length and constructed for inside insertion. The No. 752 is made extra long (having an extension one inch beyond the thread) and constructed for outside insertion only. The No. 753 is made extra long and constructed for inside insertion only. We can furnish these to order any length desired, at special prices according to quantity wanted.

## ORDERING

In ordering, always give style, number and size.

When not otherwise specified, the outside type will be furnished as follows:

No. 750—For ordinary service.

No. 752—For the Steamboat Inspection Service of the United States Government and for various State and City Laws.

## OUTSIDE OR FIRE SIDE

Size .....	inches	$\frac{1}{2}$	$\frac{3}{4}$	1	1 $\frac{1}{4}$	1 $\frac{1}{2}$	2
No. 750 and No. 751.....	each	\$0.60	.75	1.00	1.50	2.00	3.00
No. 752 and No. 753.....	each	1.20	1.50	2.00	3.00	4.00	6.00

Our Fusible Plugs are filled with BANCA TIN.

## STEAM FLUE BLOWERS

Fig. 286

Made in two styles: One for Horizontal Boilers as shown in cut and one for Vertical Boilers.

These Blowers are simple in construction and easy to operate.

Size Number of Blower	Size of Tubes Outside Diameter Inches	Size of Steam Hose Inches	Size of Pipe Thread Nipple Inches	Price, Including Clamps for Hose and Nipple Each
0	1 $\frac{1}{4}$ to 1 $\frac{3}{4}$	$\frac{1}{2}$	$\frac{1}{2}$	\$ 5.00
1	2 to 2 $\frac{1}{4}$	$\frac{1}{2}$	$\frac{1}{2}$	5.00
2	2 $\frac{1}{2}$ to 2 $\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	6.25
3	3 to 3 $\frac{1}{4}$	1	1	7.50
4	3 $\frac{1}{2}$ to 3 $\frac{3}{4}$	1	1	8.75
5	4 to 4 $\frac{1}{2}$	1 $\frac{1}{4}$	1 $\frac{1}{4}$	10.00
6	5 to 6	1 $\frac{1}{2}$	1 $\frac{1}{2}$	12.50

Unless otherwise instructed, Blowers for Horizontal Boilers will always be furnished.

For Vertical Boilers give diameter of Fire Box and height from tube sheet to bottom of furnace door. For Locomotive Boilers state length of fire box.

The above prices for Blowers do not include Steam Hose or Globe Valves. See Index.

OUR STOCK OF ENGINE AND BOILER ROOM SUPPLIES IS ALWAYS COMPLETE.

## GARDNER SPRING GOVERNORS

## THE DAVIS PRESSURE REGULATOR

Suitable for any Initial Pressure up to 200 Pounds

Sizes 1 1/4 inch and less have bronze bodies; 1 1/2 inch and over are made of iron; 1 1/2 inch and less have screwed ends only; 2 inch to 6 inch, inclusive, have either screwed or flanged ends; 7 inch and over have flanged ends only. Unless otherwise ordered, screwed end valves are sent on orders for sizes less than 6 inch. It has no diaphragms, springs, or complicated parts to get out of order, and having full pipe openings, requires no by-pass.

No. 1 is designed for all purposes where there is no pulsation of pressure, viz.: steam heating, boiling, drying, distilling, and all places requiring a constant, unvarying pressure below that of boiler.

No. 2 is the same as No. 1, with the addition of oil cylinder or dash pot, and is to be used where there is vibration or pulsation of pressure, as in the steam pipe of engine or pump when valves are opened or closed, and in steam heating systems, caused by exhaust from engines, pumps, steam elevators, etc.

In ordering, state boiler pressure that is carried, purpose to be used for, and what pressure you wish to reduce to.

## ELECTRIC MOTORS—EXHAUST HEADS

Fig. 1750

Being very conveniently located to the largest stocks of electric motors in the country, we are in position to furnish promptly any kind of motor that our customers may require.

The very highest grades of material are used in their construction. The care and attention devoted to the design and manufacture of these motors have resulted in a line which operates at very low cost and possesses perfect service reliability under the most severe conditions.

The motors we can furnish cover the entire range of possibilities for power units. They are made in sizes from 1/200 H. P. to 50 H. P. and up, and can be had for either alternating or direct current, or of the induction or repulsion type, or for single, two or three phase—in fact, there is no situation or condition which we cannot take care of with our lines of motors.

We invite your inquiries.

In writing us, please give us full particulars, advising kind of current and voltage, with whatever additional information you may have to offer, to assist us in studying out your problem and to recommend the proper units for your use.

Fig. 6363

## THE LYMAN EXHAUST HEAD

For End of Pipe Above Roof

Completely stops the emission of water and grease from outlet of exhaust pipe, which is the cause of damage to roofs, walls, etc. Steam escapes dry. There is no back pressure.

The Lyman head is the only exhaust head made with brass hand-hole, which gives easy access to head, should the drip become clogged.

Brass expansion ring furnished with each head, so as to connect drip as an expansion joint.

In ordering, state size of pipe.

Fig. 6363. Interior

Standard couplings on all small heads 1 inch to 4½ inches and on standard flange on 5-inch and larger.

FOR PIPE, FITTINGS AND BOILER ROOM SUPPLIES, SEE INDEX

## STEAM AND HOT WATER HEATING BOILERS

The principal consideration in a boiler is the ease with which it can be operated, its ability to do the work for long periods, and its economic features. The large fire chamber and the combustion space, together with the effective direct fire surfaces, with large flues, all tend to make it an economical boiler.

The fire pot has, without exception, more effective heat absorbing surface than other makes of fire pots from one to two inches larger in diameter. This is also true of the section and domes; their construction permitting twenty-five per cent more surface than the ordinary flat bottom type. They are compact and durable, show a high efficiency test and will do the work assigned to them when properly installed.

All boilers are assembled, thoroughly tested and inspected before leaving the factory; insuring material free from defects on arrival at destination.

Be sure and let us figure on your boiler requirements.

Paul Valve

### AUTOMATIC AIR VALVES For Direct Radiation

The Crane Valve will remove all air from a heating system, shuts off all steam and water automatically. The Paul Valve, made with drain-pipe connection and designed to be used in connection with the Paul Vacuum or any other drain-pipe system of heating.

Price, plated	each	Crane Valve	Paul Valve
		1.25	1.25

### COMPRESSION RADIATOR AIR VALVES

	Chased Iron Pipe		Plated
Size	inches		
No. 202, all brass	each	1/4	3/4
No. 204, wood wheel	each	.35	.40
No. 206, wood wheel, with nose	each	.45	.55
No. 208, lock and shield	each	.70	.75
No. 210, lock and shield	each	.35	.40
	each	.57	

Keys for Nos. 208 and 210, extra; plated, each 18 cents.

### MODULATING RADIATOR VALVES

Brass, Self-Adjusting Packed Stuffing Box, with Union

Fig. 231

Figs. 192, 194, 196.  
Union Elbow

Fig. 112. With Union

Size	inches	3/4	1	1 1/4
No. 231, rough body, plated all over	each	3.90	4.70	6.25

These valves allow control of the steam flow to each radiator of a heating plant.

### UNION ELBOWS For Hot Water Radiators Brass

Size	inches	3/4	1	1 1/4	1 1/2	2
No. 192, rough body, plated all over	each	1.75	2.00	2.50	3.20	4.00
No. 194, finished all over	each	2.00	2.20	2.75	3.60	4.60
No. 196, finished and plated all over	each	2.25	2.40	3.00	3.90	4.85

To facilitate ordering, simply state size and number; the number sufficiently indicates the style and finish. Finished, and Finished and Plated Elbows, are made to order only.

### Fig. 112. RADIATOR VALVES With Composition Discs, Wood Wheel

Size	inches	3/4	1	1 1/4	1 1/2	2
No. 112, rough body, plated all over	each	3.15	3.80	4.75	6.40	8.10

These valves will satisfactorily answer the purpose where the jobs are small and the steam pressure is low. Still, for the small difference in cost, we recommend the use of our Standard Valve, which is heavier and is really a good article.

FOR HEATING BOILERS AND RADIATORS, SEE INDEX

## RADIATORS—SPECIAL UNIONS

We illustrate on this page two radiators which are part of an extensive line we stock for prompt shipment. Nothing has been spared in assembling these radiators, and they represent the highest point of perfection in design, material and workmanship.

It is not possible for us to list the entire line we carry, and we invite your inquiries on any style you may have need for. We will give your correspondence our prompt attention and the prices we will quote will be highly interesting.

### ADJUSTABLE ELBOWS

Neither Too Loose Nor Too Tight

6-inch ..... per doz. \$2.20  
Dampers ..... each .15  
Collars ..... " .10

### STOVE PIPE

6 inch ..... per length \$0.12  
7 inch ..... " " .15

Can furnish galvanized at additional price.

## WATER, GAS AND STEAM PIPE

## PIPE

Our stock of pipe is much larger than that usually carried by jobbing houses, due to the heavy orders we receive daily and the range of sizes we are invariably called upon to ship "at once."

We are in position to take care of your requirements promptly, whether you want a single length, or earloads.

## PIPE TRADE CUSTOMS

**Merchant Pipe.** Used to indicate the regular pipe of the market and such orders are usually filled by the shipments of soft wrought steel pipe. The weight of Merchant Pipe will usually be found to be about 5 per cent less than card weight, in sizes 7 inch to 12 inch inclusive.

**Extra Strong Pipe.** Designates a heavy pipe, from  $\frac{1}{4}$  to 8 inches only, made of either puddled wrought iron or soft steel. Unless directed to the contrary we usually ship wrought steel pipe. Extra Strong Pipe is always shipped with plain ends and without couplings, unless we receive instructions to thread and couple, for which there is an extra charge. This term, when applied to pipe larger than 8 inch is somewhat indefinite as 9, 10 and 12 inch are made both  $\frac{1}{8}$  and  $\frac{1}{2}$  inch thick. Stock sizes,  $\frac{1}{2}$  inch thick, and this is always furnished on open orders.

**Double Extra Strong Pipe.** Approximately twice as heavy as Extra Strong, and is made from  $\frac{1}{2}$  to 8 inch in both wrought iron and steel. It is difficult, however, to find any quantity in "wrought iron," and our stock is usually soft wrought steel. This pipe is shipped with plain ends without couplings, unless we receive orders to thread and couple for which there is an extra charge.

**SPECIAL NOTICE**—Due to the large number of earloads of pipe we have on hand for immediate shipment, our prices are always as low—and sometimes lower—than it is possible to obtain elsewhere.

### STANDARD BUNDLING SCHEDULE—For Ordering Pipe

## SPIRAL RIVETED PIPE

Galvanized Pipe is furnished in any lengths up to 20 feet and is used for exhaust steam, suction pipe, paper and pulp, compressed air, etc.

Asphalted Pipe is furnished in any lengths up to 30 feet and is used for discharge pipe, dredging, hydraulic mining, pump mains, flow lines, etc.

In ordering always specify Gauge, see foot note.

## BALL GAUGE-COCK

With Jenkins Bros. Composition Plug

This Gauge-Cock is very simple and durable, and as a Jenkins Bros. Composition Plug is used to make the seat, it will remain tight for long periods. Should the plug become worn by use and the joint leak, it may be easily made tight by truing up the end of the plug with a fine file or sandpaper. This will shorten the plug slightly, and the long screw at the end of ball should then be turned in until the ball stands in a horizontal position. With ordinary use the plug will last several years, and can be renewed very cheaply.

## BRASS SAFETY VALVES

Regular Cross or Angle Pattern

Suitable for Pressures 40 to 125 Pounds.

Cross Pattern, Screwed, Fig. 126; Angle Pattern, Screwed, Fig. 126A (Not illustrated)

Sizes .....	¾	¾	1	1¼	1½	2
Prices .....	\$4.00	\$5.00	\$6.00	\$9.00	\$11.00	\$16.00

## JENKINS GAUGE COCKS, AIR VALVES, ETC.

Fig. 208. With Cleaner

Fig. 209. Without Cleaner

### PATENT GAUGE COCKS

With Jenkins Bros. Discs

Sizes	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$
No. 208	\$1.50	\$1.60	\$1.75

Sizes	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$
No. 209	\$1.00	\$1.10	\$1.30

Fig. 190

Fig. 191

Fig. 193

### JENKINS IMPROVED AUTOMATIC AIR VALVES

No. 190 shows the air valve in its simplest form. The drip cup, No. 191, is generally used in connection therewith, and is screwed to the outlet end of the valve. This will receive any water of condensation which may pass through the valve, and allow it to evaporate.

Price per doz., Finished and Nickel Plated

No. 190. $\frac{1}{8}$ inch	\$7.50
No. 190. $\frac{1}{4}$ inch	7.50
No. 191. Drip cup	2.00

### Fig. 193 With Union Drip Connection

No. 193 illustrates the air valve fitted with union, designed for connection to a drip pipe. By connecting the union outlet to a drip pipe the air valves may be set so as to permit a slight circulation of steam at all times through them, the drip pipe carrying off all condensation which may escape thereby.

Price per doz., Finished and Nickel Plated

No. 193. $\frac{1}{8}$ inlet, $\frac{1}{4}$ union	\$ 9.50
No. 193. $\frac{1}{4}$ inlet, $\frac{1}{4}$ union	10.00
No. 193. $\frac{1}{4}$ inlet, $\frac{1}{4}$ union	10.00

All of the Jenkins Improved Automatic Air Valves are capable of being easily repaired if necessary. This can be done without removing the valve from the radiator by simply replacing the plug and screw.

Price of Plug and Screw

No. 192. Parts B and C	each \$0.25

## FAIRBANKS' RENEWABLE BRONZE GLOBE AND ANGLE VALVES

Renewable vulcabeston ring disc, Follower gland. 300 pounds hydraulic test pressure, 150 pounds steam working pressure, 175 pounds water working pressure.

These valves embody the best up-to-date renewable features.

They have a raised round seat upon which scale, grit or other sediment is not liable to lodge.

The seat is preserved from injury by the use of a comparatively soft ring in the renewable disc.

Sizes  $\frac{3}{8}$  inch and under are not made with follower gland.

#### PRESSURES

Standard Weight—300 lbs. Hyd. Test Pressure. 125 lbs. Steam working Pressure. 150 lbs. Water Working Pressure.

Heavy Weight—450 lbs. Hyd. Test Pressure. 175 lbs. Steam working Pressure. 225 lbs. Water Working Pressure.

Extra Heavy Weight—600 lbs. Hyd. Test Pressure. 250 lbs. Steam Working Pressure. 350 lbs. Water Working Pressure. A ring of this special asbestos called Vulcabeston is used on the shoulder of the plug for top packing.

Prices of Bronze Cocks Furnished on Request

## THE EVERLASTING VALVE

The Everlasting Valve is composed of a top and bottom bonnet, disc, lever and post. The disc rotates over the valve seat, constantly refacing it. The Everlasting Valve is of extra heavy construction, self-cleaning, self-grinding; has no stuffing box and therefore requires no packing or repairing. Every valve is tested for 250 lbs. live steam pressure before leaving the factory. The Everlasting Valve is covered with our two years' drop tight guarantee. We agree to repair, replace or refund the money if any of the valves fail.

"EVERLASTING" BLOW-OFF

## CHECK—THROTTLE—HOSE VALVES

Fig. 44

Fig. 24

Fig. 26

Fig. 50

### Nos. 24-26 STANDARD CHECK VALVES

BRASS

For Steam Working Pressures up to 125 Pounds

Size	inches	3/4	1	1 1/4	1 1/2	2	2 1/2	3
Price, No. 24 Vertical.....each		\$0.72	.77	1.00	1.26	1.80	2.52	3.50
Price, No. 26 Angle.....each		.72	.77	1.00	1.26	1.80	2.52	3.50

### No. 44 STANDARD BUTTERFLY VALVES

BRASS

For Steam Working Pressures up to 125 Pounds. These Valves are not intended to be Steam Tight

Size, No. 44.....inches	3/4	1	1 1/4	1 1/2	2	2 1/2	3
Price.....each	\$3.10	4.40	5.65	6.75	10.00	13.75	21.00

These Valves can be supplied with a Brass Stem, instead of Steel Stem, at an extra price. Always specify Brass Butterfly Valves, otherwise sizes 2 inch and larger will be furnished in Iron.

### STANDARD HOSE VALVES

BRASS

No. 50. Iron Handle, Loose Swivel and Leather Disc

Size.....inches	1	1 1/4	1 1/2	2	2 1/2	3
Price, Rough Body, Plain.....each	\$3.15	3.70	4.75	7.00	8.50	
Price, Rough Body, Plated all over.....each	3.65	4.30	5.50	8.00	9.75	

### No. 52. Finished Brass Wheel, Loose Swivel and Leather Disc

Size.....inches	1 1/2	2	2 1/2
Price, Finished all over.....each	\$9.00	11.50	14.50
Price, Finished and Plated all over.....each	10.00	12.75	16.00

### No. 46 THROTTLE VALVES

For Steam Working Pressures up to 125 Pounds

These Throttle Valves are extensively used on hoisting and traction engines, are opened by one-quarter turn of handle, and are provided with stops. In ordering, always specify Brass Throttle Valves.

Size, No. 46.....inches	3/4	1	1 1/4	1 1/2	2	2 1/2
Price.....each	\$10.00	11.50	14.00	20.00	25.00	35.00

### No. 34 STANDARD SWING CHECK VALVES

BRASS

For Steam Working Pressures up to 125 Pounds. May be Used in a Horizontal or Vertical Position

Size.....inches	3/4	1	1 1/4	1 1/2	2	2 1/2	3
No. 34, Brass Disc.....each	\$1.80	2.00	2.25	2.80	3.65	4.75	6.75
No. 3 1/2", Leather Disc.....each	2.40	2.65	2.90	3.60	4.65	6.00	8.25

Valves with Brass Disc will always be furnished unless otherwise ordered.

Fig. 46

Fig. 34

## GREAT LAKES SUPPLY CO.

Our many customers in the south and south-eastern sections of Chicago will find our South Chicago store, the Great Lakes Supply Co., always ready to take care of their wants promptly and at the same prices as at our down-town store. They maintain an independent delivery service, which will aid materially when goods are wanted in a hurry. Try them.

## STANDARD HOSE GATE VALVES

Brass. Double Gate

Open to the left. Rising stem. For steam working pressures up to 125 pounds. For water working pressures up to 175 pounds.

Fig. 450. Iron Wheel

Fig. 56  
No. 450.

Fig. 58

Rough body, plain, with brass cap and chain.....each		5.10	6.70	8.85	12.60	20.00	28.50
Rough body, plain, without cap and chain.....each		3.35	4.70	6.25	9.00	15.00	22.00

## No. 452. WITH FINISHED BRASS WHEEL (Not Illustrated)

Size .....	inches	1	1 1/4	1 1/2	2	2 1/2	3
Finished all over, with brass cap and chain.....each		8.65	11.10	14.45	20.90	31.00	45.50
Finished all over, without cap and chain.....each		6.90	9.10	11.85	17.30	26.00	38.00
Fin. and plated all over, with brass cap & chain.....each		9.25	11.80	15.25	21.90	32.25	47.25
Fin. and plated all over, without cap and chain.....each		7.50	9.80	12.65	18.30	27.25	39.75

These Valves are made to order only.

## STANDARD STRAIGHT-WAY VALVES

Fig. 440 1/2 Brass. Double Gate

Open to the left. Brass seats. Rising stem. For steam working pressures up to 125 pounds.

These Valves are made with taper instead of parallel seats and the self-adjusting discs which have their bearings near the outer edge, give maximum strength at these essential points and bring the discs tightly and uniformly to their seats.

Size .....	inches	1/4	3/4	1	1 1/4	1 1/2	2	2 1/2	3
Price .....	each	1.45	1.45	1.65	2.05	2.80	3.70	5.00	7.20

## QUICK OPENING STANDARD STRAIGHT-WAY VALVES

Fig. 442 1/2 With Taper Seats—Illustrated Below

Brass. Double wedge gate. Quick opening. For steam working pressures up to 125 pounds.

Size .....	inches	3/4	1	1 1/4	1 1/2	2	2 1/2	3
No. 442 1/2, screwed .....		3.60	4.80	6.20	8.50	11.80	20.25	30.00

## STANDARD GARDEN HOSE VALVES

Figs. 56-58 Brass with Leather Disc

These Valves will be furnished with Chicago hose thread, California hose thread or iron pipe thread, at regular prices. Any other style thread will be extra. In ordering always specify the thread required.

Size .....	inches	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2
Price, No. 56.....each		1.65	1.65	2.20	3.40	4.75	7.00	15.00
Price, No. 58.....each		1.65	1.65	2.20	3.40	4.75	7.00	15.00

## SPECIAL GLOBE AND ANGLE VALVES

Fig. 60 NEEDLE POINT

Brass with non-heating wheel. For working pressures up to 125 pounds.

These Valves are used for regulating fuel oil feed, and are made to order only.

Size .....	inches	1/16	1/4	3/16	1/2	3/4
Size feed opening.....inches		1/4	3/8	1/2	3/4	
Price, globe, female openings.....each		1.40	1.50	2.00	2.50	
Price, angle, female openings.....each		1.40	1.50	2.00	2.50	
Price, angle, with union.....each		2.00	2.20	3.00	3.50	

Fig. 60. Angle, With Union

Fig. 442 1/2

Fig. 76E. Screwed

## HORIZONTAL CHECK VALVES

Fig. 76E EXTRA HEAVY

Cup pattern, Crane hard metal, flat seat. For steam working pressures up to 250 pounds. Tested to 800 pounds hydraulic pressure.

Cup Pattern Check Valves with a flat seat, have a full opening and are not choked by disc guides. They have a much larger seat and greater area than common valves and are so constructed that the back pressure comes on the top of valve, thus preventing the side wear of the seat, and insuring prompt closing.

Size .....	inches	$\frac{3}{4}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	2
Price .....	each	2.50	3.50	5.00	7.00	11.00

Fig. 74E. Horizontal

## REGRINDING SWING CHECK VALVES

Figs. 74E-A74E EXTRA HEAVY

Fig. A74E. Vertical

For steam working pressures up to 250 pounds. Tested to 800 pounds hydraulic pressure.

The body and disc will be made of "Hard Metal" when so ordered, at a special price, according to the quantity wanted.

Size .....	inches	$\frac{1}{2}$	$\frac{3}{4}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	2	$2\frac{1}{2}$
No. 74E, screwed .....	each	3.25	3.25	4.25	6.00	7.50	12.00	25.00

## EXTRA HEAVY VALVES

Ferrosteel. Hard metal seats. For steam working pressures up to 250 pounds. Tested to 800 pounds hydraulic pressure per square inch.

Fig. 21E

Fig. 2E

**Fig. 21E. EXTRA HEAVY GLOBE VALVES WITH YOKE**

In ordering, always specify the style number of Valve wanted.

Size .....	inches	2	2½	3	3½	4	4½	5
No. 20 E, Screwed.....each		\$26.00	33.00	37.00	42.00	46.00	56.00	61.00
No. 21 E, Flanged.....each		27.50	35.00	40.00	45.00	50.00	60.00	65.00
End to End, Screwed.....inches		9½	10¾	11¾	12¼	13	14	15
Face to Face, Flanged.....inches		10½	11½	12½	13¼	14	15	15¾
Diameter Flanges.....inches		6½	7½	8¾	9	10	10½	11
Size .....	inches	6	7	8	10	12	14	15
No. 20 E, Screwed.....each		\$75.00	95.00	114.00	190.00			
No. 21 E, Flanged.....each		80.00	100.00	120.00	200.00	300.00	400.00	400.00
No. 27 E, Flanged, with By-Pass.....each				150.00	250.00	350.00	450.00	450.00
End to End, Screwed.....inches		16½	18¼	20	23¼			
Face to Face, Flanged.....inches		17¾	19¼	21	24½	28	33	33
Diameter Flanges.....inches		12½	14	15	17½	20½	23	24½
Size of By-Pass.....inches				1½	1½	2	2	2

The By-Pass on Globe Valves is located on the right hand side looking at the inlet end, that is, the end with the passage under the disc. It is desirable that all Valves, 8 inch and larger, should have a By-Pass.

## Fig. 2E EXTRA HEAVY STRAIGHT-WAY VALVES

Ferrosteel. Hard metal seats. Wedge gate. Open to the left. Non-rising stem. For steam working pressures up to 250 pounds. Tested to 800 pounds hydraulic pressure per square inch.

Size .....	inches	1½	1½	2	2½	3	3½	4	4½	5
No. 2 E, Screwed.....each		\$24.00	25.00	27.50	33.00	45.00	57.00	60.00	77.00	85.00
No. 3 E, Flanged.....each		26.50	27.50	30.00	35.50	48.00	60.00	65.00	82.00	90.00
End to End, Screwed.....inches		5½	6¼	7	8	9	10	11	12¼	13½
Face to Face, Flanged.....inches		6½	7½	8½	9½	11½	11½	12	13¼	15
Diameter Flanges.....inches		5	6	6½	7½	8¾	9	10	10½	11
Size .....	inches	6	7	8	10	12	14	15	16	
No. 2 E, Screwed.....each		\$100.00	125.00	155.00	225.00	250.00				
No. 3 E, Flanged.....each		107.00	132.00	162.00	232.00	258.00	335.00	440.00	540.00	675.00
End to End, Screwed.....inches		15½	16¼	16½	17	18				
Face to Face, Flanged.....inches		15½	16¼	16½	17	18	19¾	22½	22½	24
Diameter Flanges.....inches		12½	14	15	16¼	17½	20½	23	24½	25½

It is desirable that all Valves 8 inch and larger should have a By-Pass. See Index. We do not recommend the use of Screwed Valves larger than 6 inch.

## EXTRA HEAVY SWING CHECK VALVES

Ferrosteel.

Fig. 442

Hard Metal Seats.

For steam working pressure up to 250 pounds. Tested to 800 pounds hydraulic pressure per square inch.

May be used in horizontal or vertical position.

## ENGINE STOPS

PACKINGLESS AND  
FRICTIONLESS AUTOMATIC  
ENGINE STOP

Approved and indorsed by Casualty companies, State Factory and Safety commissions and is the choice of leading manufacturers.

It is recommended in preference to clutch equipment or bell signal system, and will save you money on fly wheel insurance.

Provides an independent and reliable means of control over your power plants. Prevents the possibility of engine room or factory shut-downs, due to broken drive belts, overloaded generators, governor derangements, overspeeding, and bursting fly-wheels, cylinder head blowouts, etc.

ARRANGED FOR Purely Mechanical Operation, Purely Electrical Operation, Combined Electro-Mechanical Operation.

State size of steam pipe for quotation purposes.

## LEVER HANDLE OIL PUMPS

Fig. 748

These pumps are used to force oil into engine cylinders.

The arrangement is simple. The working parts consist of a plunger and two check valves, one check valve to permit the oil to be drawn into the pump, the other to allow it to be forced into the cylinder. We have found them more practical than other pumps, especially when graphite or plumbago is to be used with the oil.

These pumps are finished and highly polished and are fitted with  $\frac{1}{4}$  inch union pipe connection both openings. They can be bolted to any convenient place, by means of the projecting lips at the base.

Price .....each \$20.00

## SPRING KEY COCKS

Fig. 177  
Spring Key Cock with  
Tee Handle

Fig. 174  
Spring Key Cock with Lever  
Handle, Double Male End

Fig. 175  
Spring Key Cock, with Tee  
Handle, Bibb Nose

## FOR AIR, GASOLINE, ETC.

The keys are self-adjusting, the springs taking up wear. The shank being uniform the key is easily turned and it will not stick as is often the case with the old style.

## STANDARD PRESSURE REGULATORS

For Steam, also Water or Air when so Specified

Fig. 971

Fig. 972

Fig. 973

Fig. 974  
Marine TypeFig. 975  
Low Pressure  
TypeInterior View  
Piston Type

No. 971 Regulators are for general service and used where the duty is steady on the reduced pressure side.

No. 972 Regulators are the same as No. 971 with the addition of Dash Pot, which prevents noise or chattering when duty on the reduced pressure side is varying, due to the quick opening and closing of valves, or the pulsation of pressure, as in the steam pipe of engines or pumps, or the exhaust of high speed engines.

No. 973 Regulators have expanded outlet, allowing steam to expand quickly and decrease in velocity. These valves are especially adapted to conditions requiring large volumes of steam, reduced noiselessly from comparatively high to very low pressures for steam heating and other purposes. Expanded outlet valves of the 975 low pressure type for use on low pressure and vacuum heating systems, are also furnished in corresponding sizes and numbered 975½.

Nos. 971, 972 and 973 Regulators are suitable for initial steam working pressures up to 200 lbs.

No. 974 Regulators (marine type) are fitted with very heavy working parts to withstand high steam pressures up to 250 lbs. They have sliding ball weights with set screws, instead of loose weights, and are especially adapted for marine and all high pressure service.

No. 975 Low Pressure Regulators are principally used for steam heating purposes and intended for low pressure service only. Their operation is very sensitive and positive and is governed entirely by the pressure existing in the low pressure main, which acts directly on the diaphragm, by means of the small size pipe connection. The lever is fitted with an adjustable regulating weight on each end. These Regulators are also furnished in the expanded outlet type, No. 975½, for extremely low pressure or vacuum systems.

When ordering, be particular to state size and style number, whether screwed or flanged; also give boiler pressure and pressure desired on reduced side; state what purpose Regulator is for, and whether same is to be used on steam, water or air.

				10x16	650.00	600.00		
				10x20	700.00	650.00		

The 1½-Inch and smaller Regulators are made of all brass; the 2-Inch and larger have iron bodies and brass trimmings.

The 1½-Inch and smaller Regulators have screwed ends only; 2 to 6 Inch, made either with screwed or flanged ends; larger sizes made with flanged ends only.

Unless otherwise specified, screwed Regulators up to and including 6-Inch will be sent, and in all cases when the style is not given, No. 971 will be furnished.

When flanged Regulators are ordered, we will always furnish with standard diameter flanges, and not drilled, unless otherwise specified. Extra heavy diameter flanges will be furnished when so specified, without extra charge. Drilling flanges will be at an extra price.

## LOW PRESSURE BRASS POP SAFETY VALVES

For Steam Heating Boilers

Set at any Pressure Specified up to 20 lbs.

These Valves are made of brass, with a strong and durable base, and are fitted with best steel springs.

In addition to their extensive use on steam heating boilers, they are also useful on boiling kettles, tanks, etc.

The outlet holes on all sizes of these Valves are located to blow "downward."

In localities where Boiler Inspector Seal is required and so specified, we will furnish these Valves with lug cast on body and corresponding holes drilled through this lug and the hexagon corners of cap, for attaching wire and seal.

When not otherwise specified we will furnish No. 1160 rough body Valves set at 10 lbs.

Fig. 1103

Fig. 1107

When ordering, always specify the style number and state the pressure at which valves are wanted set to blow off. When not otherwise specified, No. 1103 twin type with brass seats will be furnished.

The above prices include two Valves and corresponding Y Base all bolted together as shown in cuts.

## MARINE POP SAFETY VALVES

## ESSENTIAL FEATURES

Bevel Seats at an angle of 45 degrees, brass or with solid nickel bushing as required.

The Cam Lever will lift the Valve off its seat one-eighth the diameter of Valve opening. The Cam Lever may be thrown over far enough to lock the Valve open, should occasion require.

The Cap is made with handle or cross-bars, fastened to stem and secured to main Valve, providing means for turning the Valve on its seat when steam is on, to remove any incrustation or saline matter that may accumulate.

## No. 1109 LOCKED UP MARINE POP SAFETY VALVES

Comply with all the requirements of the United States Board of Supervising Inspectors of Steam Vessels and will be passed by all Local Inspectors on the basis of Valve Area Formula as prescribed (Rule 11, Section 26) in the General Rules and Regulations as amended January, 1909, and approved by the Secretary of the Department of Commerce and Labor, March 20, 1909.

The above Amended Rule of the U. S. Steamboat Inspection Service (Issued by the Department of Commerce and Labor) supplies a formula which gives the required Valve Area in square inches, based on pounds of water evaporated per hour per square foot of grate surface, as represented by figures given in a rated table of evaporation under different pressures of steam.

When ordering, always specify the style number of valve and state the pressure Valves are wanted set to blow off, also whether brass or nickel seat.

Valves with brass seat will always be furnished unless nickel seat is specified. These Valves are furnished locked up.

Unless otherwise specified, these Valves will be furnished with flanged inlet and flanged outlet, and of the dimensions as given above.

An additional charge will be made for special-diameter flanges. Drilling extra.

Templates for drilling should always accompany orders, otherwise we will drill the base (inlet) flange according to extra heavy templates, and the outlet flange according to standard templates. The  $\frac{5}{8}$  inch Valves will be drilled same as 6 inch templates.

Hexagon screwed base or screwed outlet will be furnished, when so ordered, without extra charge.  
\*When screwed outlet is called for on  $\frac{5}{8}$ -inch Valve, thread will be cut for 5-inch pipe.

## CARPENTER SERVICE

A shutdown or breakdown in any industrial plant is an expensive event. The chief concern of the operator is the interruption of his daily production and the forced idleness of both his help and equipment. His first thought is for the rapid repair of the damage and he usually insists on speed all the way down the line.

If you want anything in a hurry, or your plant is tied up for the lack of an important part that will make the wheels turn again, send us a wire, or better still, call us on the long distance telephone. The chances are that we have in stock what you want. If so, the first train out will have your goods on it.

Price, recessed, galvanized	each	4 1/2	5	6	7	8	9	10		

These couplings are made extra heavy and long, and cut with a perfect taper and longer thread.

Threads for these couplings may be cut with an ordinary die.

The object of the Recessed Couplings is to make a better joint, protecting the pipe at the weak point, viz: That part left exposed from cutting the thread and not covered with the ordinary coupling.

## XX HYDRAULIC COUPLINGS

Fig. 94E

## CRANE UNIONS EXTRA HEAVY—MALLEABLE IRON

For Steam Working Pressures up to 250 Pounds

These Unions are tested to hydraulic pressure corresponding to the working pressure. Furnished with metallic gasket. The face of this Union, being corrugated, holds the metallic gasket in place. This improvement makes the blowing-out of the gasket absolutely impossible. Should it at any time be necessary to replace the gasket, it can be readily done.

Size	inches	1/4	3/4	1 1/2	2	3	4	6	8	10	12

### GALVANIZED EXTRA HEAVY FITTINGS DOUBLE ABOVE LIST

The radius of these fittings is longer than the ordinary, thereby reducing friction.

We do not recommend the use of screwed fittings above 6 inch; for larger sizes, flanged are more suitable.

For list of sizes of reducing fittings carried in stock, see index. Should other sizes be wanted, we will furnish them to order, and will charge extra, according to quantity wanted.

## MALLEABLE IRON FITTINGS

Ring gaskets will always be furnished, unless otherwise ordered.

The commercial corrugated copper gasket is made from 27 gauge sheet copper, and this gauge will be furnished on all orders for low pressure or standard copper gaskets. We can furnish these gaskets made from heavier sheet copper at an extra price. We can furnish gaskets made from any sheet rubber or metal that is manufactured.

Full Face Gaskets are furnished without bolt holes; bolt holes will be punched at an extra price when so ordered.

ALL THE ABOVE PRICES ARE NET. SUBJECT TO CHANGE WITHOUT NOTICE

Ring Gaskets cover the faces of flanges inside of bolt holes, and will always be furnished unless otherwise ordered. Corrugated Copper Gaskets are made from 27 gauge copper. We can, however, furnish these Gaskets made from a heavier gauge of copper, at an extra price, with either plain or corrugated faces, and hard or annealed. Special Corrugated Sheet Iron, or Steel Gaskets, for cyanide piping, made to order. We can furnish Gaskets, at special prices, made from any brand of sheet rubber manufactured. See index.

Full Face Gaskets are furnished without bolt holes; bolt holes will be punched, at an extra price, when so ordered.

### SLIP AND SCREW JOINT VARIABLE ANGLE MALLEABLE IRON STAIR RAIL FITTINGS

Angle Fittings, Vertical Joints Screwed, Angle Joints Drilled for Rivets

These fittings may be used on any stair rail between  $27\frac{1}{2}^\circ$  and  $47\frac{1}{2}^\circ$ .

30° fittings—for angles between  $27\frac{1}{2}^\circ$  and  $32\frac{1}{2}^\circ$ .

35° fittings—for angles between  $32\frac{1}{2}^\circ$  and  $37\frac{1}{2}^\circ$ .

40° fittings—for angles between  $37\frac{1}{2}^\circ$  and  $42\frac{1}{2}^\circ$ .

45° fittings—for angles between  $42\frac{1}{2}^\circ$  and  $47\frac{1}{2}^\circ$ .

When ordering, specify number and angle of fitting required.

Size	inches	1	1 1/4	1 1/2	2
No. 15, angle tee	each	1.30	1.50	2.00	2.50
No. 16, angle elbow	each	1.10	1.25	1.70	2.25
No. 17, angle cross	each	1.50	1.75	2.35	2.75
No. 18, angle tee	each	1.30	1.50	2.00	2.50
No. 19, single angle cross	each	1.50	1.75	2.35	2.75
No. 20, single angle tee	each	1.30	1.50	2.00	2.50
No. 21, angle tee, right hand, side outlet	each	1.85	2.20	3.00	3.60
No. 22, angle tee, left hand, side outlet	each	1.85	2.20	3.00	3.60
No. 23, square post angle flange	each	1.50	1.75	1.90	2.25

These fittings take the place of special angle fittings, have a better appearance and are stronger than the adjustable, and are time and money savers.

The posts are first screwed together and the rails are then fitted and riveted.

Fittings larger than 2 inch are made to order only.

Fittings will be furnished tapped, as shown in cuts, or right hand on all openings when so specified, at regular price. Tapped otherwise will be charged at 15 per cent additional, net.

Reducing sizes will be made to order at a special price, and unless otherwise specified, will be tapped same as straight fittings, as shown in above cuts.

Fittings will be reamed for slip joints, when so specified, at an additional price. Inquiries and orders should be accompanied by sketches showing clearly which openings are to be so reamed.

In ordering, specify catalogue number and size.  
Black will always be furnished unless galvanized is specified.

## FLUSH JOINT STAIR RAIL FITTINGS

For Schools and Public Buildings

These fittings are made with an extension or connector, over which the pipe is tightly driven up to the face of fittings, forming a smooth, flush joint.

These fittings will be furnished to order only.

Inquiries and orders should specify style number, size and angle, also whether black or galvanized, malleable iron or finished brass.

Chime Whistles can only be furnished with pipe connection as listed above.

### Fig. 604. MOCKING BIRD STEAM WHISTLES

For Steam Working Pressures up to 125 Pounds

This improved piston whistle is particularly adapted for river boats, fog signals, fire alarms, etc., making a different sound from the ordinary steam whistle, being so constructed that the sound can be changed instantly, whereby boats, etc., using them can be easily distinguished at a long distance.

These list prices apply only on lots of not less than 100 of a size.

Unless otherwise specified we will furnish Machine Bolts with square heads and hot pressed square nuts. Length of Machine Bolts is measured under head to point.

Bolts with hexagon heads, or hexagon nuts, 10 per cent extra.

If both hexagon heads and hexagon nuts, 20 per cent extra.

Bolts with square nuts, U. S. S., 5 per cent extra.

Bolts with hexagon nuts, U. S. S., 15 per cent extra.

WE CAN FURNISH ANY STYLE OF BOLTS OR RODS TO ORDER

## GEO. B. CARPENTER &amp; CO.

## CARRIAGE BOLT LIST

With Full Size Square Under Heads, Forged Nuts and Finished Points

Effective November 1st, 1912

PRICE PER HUNDRED

## BOILER PATCH BOLTS

Per 100. All 12 Threads

Length, inches	$\frac{3}{8}$	$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{1}{2}$
$\frac{1}{2}$ inch diameter	\$3.75	\$4.00	\$4.25	\$4.50	\$4.75	\$5.25
$\frac{5}{8}$ inch diameter	4.25	4.50	4.80	5.10	5.50	6.50
$\frac{3}{4}$ inch diameter	....	6.00	6.50	6.80	7.25	8.25
$\frac{7}{8}$ inch diameter	....	....	9.50	9.85	10.25	11.25
1 inch diameter	....	....	13.50	14.00	14.75	16.25

Blank, Not Threaded

Diameter, inches	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{3}{4}$	$\frac{7}{8}$	1
Per pound	\$0.25	\$0.20	\$0.19	\$0.18	\$0.17

The length of bolts and blanks is taken from the largest diameter of bevel to point.

In ordering patch bolts, please specify the diameter first, then the length, thus:  $\frac{3}{4}$  x  $\frac{7}{8}$ .

## ELEVATOR BOLTS

(Illustrated on page 489)

Per Hundred. List April 1, 1913

Length, inches	$\frac{3}{4}$	$\frac{7}{8}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	$1\frac{3}{4}$	2
$\frac{3}{16}$ - $\frac{1}{4}$ inch diameter	\$2.20	\$2.30	\$2.30	\$2.40	\$2.50	\$2.60	\$2.70
$\frac{1}{8}$ inch diameter	3.00	3.00	3.00	3.20	3.40	3.60	3.80
$\frac{3}{8}$ inch diameter	4.00	4.00	4.00	4.30	4.60	4.90	5.20

FOR ELEVATOR BUCKETS AND LEATHER WASHERS, SEE INDEX

## PLANER HEAD BOLTS

Price per 100. Without Nuts

Diameter of Head		$\frac{7}{8}$	1	$1\frac{1}{8}$	$1\frac{1}{4}$	$1\frac{1}{2}$
Length of Head		$\frac{1}{8}$	$\frac{1}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{1}{2}$

Finished Case Hardened Hexagon Nuts for above		\$10.00	\$12.00	\$15.00	\$16.00	\$18.00

All 12 threads to the inch.

Fig. 604D

## COUPLING BOLTS

- 1—Coupling Bolts of ordinary sizes carried in stock only.  
 2—Coupling Bolts have milled bodies and the heads and nuts are faced true with the body.  
 3—When so ordered, the heads and nuts will be finished, at an additional price.  
 4—All orders filled with U. S. Standard thread unless otherwise specified.

Always specify diameter of bolt when ordering.

Special prices quoted on lengths over 12 inches.

## CINCH ANCHORING SPECIALTIES

Cinch Expansion Bolt

The Cinch Anchoring Specialties are three in number—Cinch Expansion Bolts, Cinch Anchors and Cinch Stud Anchors. They differ from each other only in the kind of bolt that is used, the position in which the bolt is installed or the order in which the parts of the Cinch anchorage are used.

Each of the Cinch Specialties develops an anchorage that will reach and overreach the tensile strength of any steel or wrought iron bolt.

To secure this bull dog grip, a hole of less depth is needed than any other expansion device on the market requires.

The hold is secured by the expansion of the lead members so that all the irregularities in the drilled hole are filled and a solid grip is secured on the whole inside surface of the hole. In this way the Cinch Specialties afford all the advantages of a poured lead anchorage combined with the ease and convenience of installation of an expansion bolt.

The Cinch Anchorage may be set in the masonry before the work is placed in position, with the head of the bolt either in the hole or out of the hole.

As the load is distributed uniformly on the surface of the hole, Cinch Anchorages will not crush or destroy the face of the masonry.

Cinch Anchorages will not work loose from vibration and can be installed at any desired distance from the face of the masonry.

When the Cinch Expansion Bolt is used, expansion is secured by turning the bolt. In the case of Cinch Anchors and Cinch Stud Anchors expansion is obtained by caulking.

Properly installed a Cinch Anchorage cannot be pulled out.

Ask us to send you our Catalogue of  
Cinch Specialties

Cinch Anchor

Cinch Stud Anchor

Two-Unit Cinch Expansion Bolt (Installed)

Note that head of bolt is out of hole.  
Bolt can be taken out any time.

Two-Unit Cinch Anchor (Installed)

Note that head of bolt is in hole.  
Bolt cannot be removed.

Two-Unit Cinch Stud Anchor (Installed)

Note that bolt can be removed.

## CINCH ANCHORING SPECIALTIES

### Price per Hundred Two-Unit Anchorages

Consisting of 4 pieces—2 Irons and 2 Lead Alloys. Without Bolts. Units either plain or threaded.

Two-Unit Anchorage, Plain

Use two units for anchorage of ordinary strength

## SCREW ANCHORS—EXPANSION SHIELDS

### SEBCO SCREW ANCHORS

Patented.

#### List Prices per Hundred—WITHOUT SCREWS

Made of composition metal in one piece and so constructed that the screw cuts its own thread, thus permitting the use of all wood, machine and special screws. The Anchors hold equally well with any kind of screw.

These Anchors will not break, chip, mar, rust or deface the finest marble or tile.

To Order, The Anchors alone are usually ordered as they are used with regular screws. Should the screw be desired, add the length of the Anchor to the thickness of the material fastened, and you will have the right length of screw.

If electric drill is used, the cutting edge should be from 1/32 to 1/16 inch over the size shown above.

For List Price of Steel Set Screws, Add 25 Per Cent to the Above

## SOCKET SET SCREWS

## Steel—Cup Point—Case Hardened

The wide demand for socket set screws compelled us to increase materially quantity carried, and we are now prepared to furnish from stock all sizes listed below.

These screws are true to size with clean, accurate threads and will answer every purpose for which they are designed. They are carried in stock with cup points and both U. S. S. and V threads, although any style of point or thread can be supplied to special order.

These screws are milled from special steel bars and case hardened, have die cut threads and will follow standard taps closely.

A WRENCH IS PACKED WITH EACH BOX OF SCREWS

Size	Threads to inch	List Price per 100	Number in box
5/16 x 1/2	18	\$3.00	100
3/8 x 1/2	16	3.30	100

## CAP SCREWS

Fig. 351A. Square Head

Fig. 351A. Hexagon Head

1. Cap Screws having heads that are ground and of dimensions and threads listed, are regular.
2. On all screws of one inch and less in diameter and four inches long and under, threads are cut  $\frac{3}{4}$  of the length; longer than four inches, threads are cut half of the length.
3. For case hardening add 15 per cent to net price of regular Cap Screws.
4. In ordering specify diameter of screw.

## FILLISTER HEAD CAP SCREWS

1. Fillister Head Cap Screws are milled from bars slightly larger than the heads. The heads are true with the body and are well finished.
2. Length of heads is the same as diameter of screws.
3. Fillister Heads, ordinary sizes only, carried in stock; all others made to order at special price governed by quantity.

## FLAT HEAD CAP SCREWS

### MILLED FROM SOLID BAR

1. Flat Head Cap Screws are made in same manner as Fillister Heads.
2. Flat Head Cap Screws are measured over all for length. Ordinary sizes only carried in stock; all others made to order.

### Prices per 100

## PLOW AND CULTIVATOR BOLTS

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

PLEASE ORDER BY FIGURE NUMBER TO AVOID MISTAKE

In ordering Plow Bolts, please state what style heads are desired. Right-hand threads will be sent, unless left-hand threads are ordered. Left-hand threads, 10 per cent. extra.

Most styles are made to order only, so please allow as much time as possible in ordering.

FOR ALL STYLES OF WRENCHES, SEE INDEX

Parts of "New Easy" Handle

**"NEW EASY" BOLT CLIPPERS**

Made of the best stock, in the most careful manner, by skilled workmen with special machinery and tools. All parts are made in duplicate to standard gauges and will always fit. The simple turn of a screw provides ample adjustment (from one thousandth of an inch up), always keeping the cutting edges in contact during the life of the jaws.

If the clipper is used according to directions, they will last a long time and pay for themselves many times over.

The handles are of jappanned malleable iron, tough and strong; the buffers are high quality rubber springs; the jaws are high grade tool steel, of a temper shown by long experience to be the best for cutting annealed bolts and rivets. The jaws can be dressed when necessary with a mill file.

Jaws of special temper can be furnished to cut special materials.

In ordering be sure and specify size of bolt.

Sizes not enumerated on above list will be charged extra at discretion of manufacturers.

FOR TABLE OF NUMBER OF NUTS TO KEY, SEE INDEX

## "ABSOLUTE" LOCK NUTS

Lock automatically, unlock with a nail. Locking device lies entirely within the nut. They require no extra bolt length. Easily removed and will not rust or bind. Very strong and are great time savers. Are being used with great success on crossings, switches, insulated joints and signal devices. For rail joints, car shop machinery and motors they are unusually efficient.

SEMI-FINISHED AND FINISHED CASE-HARDENED  
HEXAGON NUTS

Manufacturers' Standard List

In Effect May 5, 1911

The thread and outside of each Finished Nut are made to an accurate gauge and to the standard adopted by the U. S. Government. First class in all respects.

The Semi-Finished Nuts correspond with the Finished Nuts in all dimensions; they are U. S. Standard Nuts, tapped and faced true on bottom.

Fig. 352C  
Finished

In ordering always give bolt size.

5 3/4	4 1/4	4 1/4	3 1/2	9.90	11.00	18.00	20.00

For nuts thinner or smaller than standard, use regular list.

For semi-finished nuts, case hardened, add 20 per cent. to the list and use double chamfered list if rounded on top.

For finished nuts not case hardened use regular list.

For nuts polished after case hardened add 30 percent to the list.

When ordering 1/2 inch nuts please state whether they are to have 12 or 13 threads per inch.

Square, semi-finished nuts take same list and discount as hexagon.

FOR WRENCHES TO FIT ABOVE NUTS, SEE INDEX

## SPRING COTTERS

Cellar Box Cotters listed on page 725

Fig. 1129

All measurements made under the eye. List in effect July 21, 1911. Superseding all previous lists.  
These Spring Cotters will run at least 10 per cent better than any others on account of superior heading and pointing and the fact that they are hand inspected and all culis, dirt and imperfect cotters thrown out.

Prices on larger sizes upon application.

3 1/2 inch and smaller, one dozen pairs in a box; 3 1/2 to 4 1/2 inch, one-half dozen; 5, 5 1/2 and 6 inch, one-quarter dozen.

The 2 1/2 inch and larger have five knuckles in the joint; the smaller sizes, three.

## WROUGHT STEEL SCREEN DOOR HARDWARE

Complete Sets for Screen Doors in Convenient Packages

Set No. 1752J

Each set consists of one pair of ornamental wrought steel loose-pin butts, 2 1/2 x 2 1/2; one wrought steel pull, 3 1/2 inches long; one wire spring No. 2; one gate hook and eye.

The butts are applied to the surface of the door, thus saving the time required in mortising. When once applied it is not necessary to remove the screws. By merely slipping out the pins the door is easily taken off and can be as readily rehung when necessary.

No. 1752J. Japanned finish. Per gross sets with screws ..... \$29.60

No. 1753J. Hinges, per doz. pairs with screws 1.35

Each set in a box, with screws; 12 sets in a carton; one gross sets in a case.

Fig. 1752J

The 2 1/2 inch and larger have five knuckles in the joint; smaller sizes, three.

3 inch and smaller, one dozen pairs in a box; 3 1/4 to 5 1/2 inch inclusive, one-half dozen; 6 inch, one-quarter dozen.

## KING DETACHABLE AND ADJUSTABLE SPRING HINGE SET

## An All Quality Low Priced Hinge Set

Size 2 3/4 x 3 3/4 inches.

Set comprises 1 pair hinges with screws, pull-out hook and eye, packed in carton.

Hinges have removable pin and adjustable spring tension. All-steel construction. Simple, strong, durable and attractive in design. The spring tension is easily and quickly adjusted with a common wire nail, and the door taken down by simply releasing the spring and withdrawing the pin without removing any screws or using any tools.

## DOOR CHECKS

### THE CORBIN DOOR CHECK AND SPRING

1911 MODEL.

With or Without Hold-Back Attachment

The 1911 model has many features which are different from any found in those previously made. It has been tested for an extended period, under the most severe conditions, and has proven itself strong and reliable in every particular. It is offered with the confident expectation that it will be found superior to any other checking device in existence.

**Hand**—Right or left hand without change. In applying the tension, the spring is wound in one direction for right hand and in the other for left hand.

**Check**—A rack and pinion mechanism is used to control the checking action. This is in effect from the moment the door begins to close and gives a steady, uniform movement, free from shock or jar. The valve permits adjustment to any speed desired.

**The Spring** is of a form that gives a quick, live resilient action, with a minimum of crystallization from use. The construction of the check makes it impossible to apply a greater tension to the spring than it is designed to withstand. Every precaution has been taken to guard against breakage.

**Leakage** cannot occur. The pressure is applied to the liquid in the cylinder or checking chamber, and there is no pressure near the spindle. Capillary attraction alone could cause the liquid to rise to the top of the check, and this is absolutely prevented by the unusual length of the gland and the character of the packing.

**The Bearings** are liberally designed with a view to reducing the effect of wear. The bottom bearing holds all parts in alignment and adds to the rigidity.

**The Parts** are few in number, strong and easily replaced. The interior of the check is easily accessible, it only being necessary to first remove the arm and then the cover and ratchet in one piece to reach the spring. The same brackets are used as with the Universal or 1899 pattern.

**An Instruction Sheet**, giving directions for application, is packed with each check.

**The Liquid** is a compound which will not freeze and is not affected by extreme heat. The working parts of the check are immersed in it and their action is lubricated by it.

#### CLASSIFICATION

- No. 1. For screen doors.
  - No. 2. For door between dining room and butler's pantry, car doors, etc., or any inside door not over 7 feet by 2 feet.
  - No. 3. For outside doors not larger than 7 feet by 2½ feet, steamboat doors, vestibule doors, etc.
  - No. 4. For outside doors not larger than 7½ feet by 3 feet.
  - No. 5. For doors not larger than 7½ feet by 4 feet.
  - No. 6. For extra high doors and extra heavy doors, such as are used in public buildings, stores, hotels, railroad depots, etc.
- If the door is unusually heavy, or very strong draughts are to be encountered use one size larger than specified.

### WROUGHT STEEL HEAVY DOOR HANDLES

For Garages, Stables, Freight Cars, Etc.

Fig. 1265

One-half dozen in a box, with 1½ x 13 inch screws to match.

These handles are absolutely rust-proof. They have a smooth, velvety surface which is a part of the metal itself, and will not chip or wear off.

The No. 1265 Handle is re-enforced at points of greatest strain, and is designed to develop the full strength of the metal. The grip is of generous size and conform to the shape of the hand. Without question this is the strongest and most comfortable handle made.

For roller bearing, add to list.....	\$0.35
For gun metal pins, add to list.....	.35
For boxes and screws, add to list.....	.10
For screws, add to list (Screws not included unless ordered).....	.06
For turned wheels, add to list.....	.15

When ordering pulleys, always give style of case and wheel desired.

Can furnish pulleys in any desired finish.

Plain face pulleys packed 100 doz. in a barrel.

Finished face pulleys packed 1 doz. in a package, 100 doz. in a barrel.

Bronze metal face pulleys packed 1 doz. in a package.

## LOCK-SEAM SPEAKING TUBE

Made of best coke and terne plate, lock seamed throughout its entire length.

Put up in 5 ft. lengths. Crated, 1,000 ft. to the crate.

Per 1,000 ft. .... \$20.00

One inch round crimped tin Speaking Tube Elbows.....per doz. \$0.75

## SLIDING DOOR EQUIPMENT

Fig. 1010

## ROUND TRACK HANGERS

This Hanger has all the advantages of any swingout or other style of hanger, with none of the weak points. Hanger Frame is made of thoroughly annealed malleable iron of one solid piece, ribbed and reinforced, with no bolts or rivets to break or become loose. The Wheel, with perfectly grooved tread, has hardened steel axle, washers and roller bearings packed in the highest grade graphite lubricant, making the hanger absolutely anti-friction and very durable.

The Track is made in lengths of six, eight or ten feet. It is a high carbon, heavy round steel tube, with a  $\frac{3}{8}$  inch slot in the back to allow insertion of track brackets. This shape makes it stronger and more rigid than other styles of track and always allows a perfect bearing for the wheel, with no side friction. Brackets are malleable iron, fitting inside of track tightly, and may be spaced to meet any requirements. One center bracket is used to connect two lengths or sections of track, making the joint as strong as any other part of the track.

Hanger, Track and Track Brackets finished in durable black enamel, baked on.

No.	Description	Shipping Wt., lbs.	List Prices
14	Barn Door Hangers .....per doz. pairs	100	\$19.20

## BARN DOOR STAY ROLLER AND BINDERS

Fig. 57. Steel Stay Rollers, reversible and adjustable for doors  $1\frac{1}{2}$  to 3 inches thick. Weight per doz. 19 $\frac{1}{2}$  lbs.

Price per doz. .... \$2.50

Fig. 59. Steel Stay Rollers, with 10 inch wall strap, reversible and adjustable for doors  $1\frac{1}{2}$  to 3 inches thick. Weight per doz. 33 lbs.

Price per doz. .... \$5.00

Fig. 367. Made of thoroughly annealed, non-breakable malleable iron, japanned, 7 inches wide by 3 inches high by 6 inches deep. Wheel  $3\frac{1}{2}$  inches in diameter. Has slotted holes for  $\frac{3}{8}$  inch bolts and is generally applied with three  $\frac{3}{8}$  by  $3\frac{1}{2}$  inch lag screws. Weight each, 3 $\frac{1}{4}$  lbs.

List price each.....\$0.80

## BARN DOOR BINDER

Fig. 173. A combined bumper and binder, serving to stop the door and hold it against the building. Two or more should be used with every sliding door. It also serves as a substantial bar staple for locking swinging doors, in which case two or more are used.

Made of wrought steel. Width, 1 $\frac{1}{2}$  inches; length, 8 inches. Standard finish, black japanned; galvanized finish furnished at extra charge.

Packed one dozen in box without screws or bolts. Shipping weight 13 lbs.

List price per dozen.....\$1.50

FOR BOLTS, LAG SCREWS, HINGES, LOCKS, ETC., SEE INDEX

## FIRE DOOR HARDWARE AND HANGERS

Fig. 500. Inclined Track Automatic Closing Device

## SLIDING FIRE DOOR HARDWARE

Fig. No. 500 represents the most reliable and effective automatic closing feature yet devised. It has two links, one placed over the opening, the other in the opening, the fusing of either instantly releasing the door.

Blue Prints and Special Information Promptly Furnished

No.	Description	Shipping Wt., lbs.	List Prices
3	Rigid Hangers, per pair. ....	20	\$ 4.20
6	Double Adjustable Hangers, per pair. ....	30	6.00
	Door for opening over 6 feet wide requires 1½ pairs hangers		
3	Track with brackets, per 100 feet. ....	225	30.00
	Track required is twice opening width plus one foot.		
500	Fixtures (not including hangers and track), per set. ....	87 ½	13.50
500A	Fixtures, including all parts furnished with No. 500 except Nos. 313, 314, 375 and 376 parts. ....	69	11.00

Fixture sets include all necessary counterbalance weight, wall bolt washers, and bolts and screws for attaching parts to door, but wall bolts are not included.

Standard finish, black japanned; galvanized finish furnished at extra charge.

## ROUND TREAD WATERSHED DOOR HANGER

An unusual door hanger in that it is bird, ice, snow, dirt, rust, rain and weight proof. It is simple in design and strong, being made from one steel blank without rivets or welds. Secured rigidly to the building with three bolts and nails spaced every six inches; center brackets are eliminated and the stress evenly distributed throughout the entire track length. Because of the cylindrical wheel tread and watershed expansion, the tandem type hangers operate with least possible friction. No service too hard. No door too heavy or too large. The only perfect watershed providing the swingout feature by the frictionless tilting of the hanger wheels on the rounded tread of the track. Allows 4½ foot swingout on a 9 foot opening.

No. 1010. Single Adjustable Hangers, japanned, shipping wt., 116 lbs. .... per doz. pairs \$24.00

No. 1012. Double Adjustable Hangers, japanned, shipping wt., 120 lbs. .... per doz. pairs 26.00

No. 1010. Track, japanned, shipping wt., 240 lbs. .... per 100 ft. 24.00

Fig. 1010  
FOR BOLTS, LAG SCREWS AND EXPANSION SHIELDS, SEE INDEX

## GARAGE HARDWARE

## GARAGE DOOR SET

Fig. 1776

Put up in handy packages for your shelves. Saves time and labor. Size of box, 12  $\frac{3}{4}$  x 7  $\frac{1}{4}$  x 2  $\frac{7}{8}$  inches. Gross weight, 20 lbs. Each item is wrapped separately and screws of proper size and finish are included.

No. 1776-J1. Japanned finish.....per set \$3.70

### EXTRA HEAVY WROUGHT STEEL GARAGE HINGES

Corrugated

WITH BALL-BEARING WASHERS

No. 1458. With 1  $\frac{1}{8}$  inch offset for wood.

No. 1459. With 2  $\frac{1}{4}$  inch offset for brick and concrete.

These Hinges Permit Closing Doors Tightly, Which is Impossible with Hangers

Length of hinges from center of joint, 56 inches.

Gauge of metal, .203.

Width of long strap at joint, 4 inches; at end, 2 inches.

Width of pad on 1458, 2  $\frac{1}{4}$  inches.

Countersunk for No. 20 wood screws, and with combination holes, to take  $\frac{3}{4}$  inch lag screws or carriage bolts on the strap.

Packed one pair in a package with 12x20 wood screws.

We shall furnish when ordered  $\frac{3}{4}$ x3  $\frac{1}{4}$  inch carriage bolts for the strap, and 2x20 wood screws, or  $\frac{3}{4}$ x2 inch lags screws for the pad. Made right and left hand.

The corrugation adds to the strength and appearance of the Hinges.

By the use of the B.B. washers all friction in the joint is practically overcome, so that there can be no wearing down of the butt under the severest strain, no creaking of the door and no need of oiling the butt, thereby disfiguring finishes and gathering dust. The door swings easily and noiselessly. The washers are so constructed that they cannot come apart, and the improved brass cap protects the balls from moisture and dust. The hardened tool steel balls are set in a case-hardened raceway, and each bearing will sustain a load of 1,000 lbs. without crushing.

Nos. 1458-1459. Finish, plain steel, without screws.....per pair \$ 6.60

Nos. 1458J-1459J. Finish, japanned, with screws.....per pair 6.30

Nos. 1458Z-1459Z. Finish, Stanley Sherardized, with screws, per doz. 10.50

FOR MECHANICS TOOLS, SEE INDEX

### ALLIGATOR BARN DOOR LATCH

MALLEABLE

REVERSIBLE

Fig. 35

The best and most popular Snap Latch on the market. It has every advantage of durability possible, closes and latches doors with the minimum effort, is not affected by warping or sagging of doors. Padlock may be snapped through latch, making a perfect lock.

Can be opened from either side of the door.

Reversible for either right or left hand doors.

Length of latch bar, 4  $\frac{1}{2}$  inches.

No. 35. Barn Door Latches, japanned, weight, 16 lbs. ....per dozen \$5.00

Sizes indicated by bold faced type represent those sizes which have been approved by the Society of Automobile Engineers as Standard.

Any other sizes other than Standard must be considered as special.

## TRAILERS

Fig. 33

Automobile trailers are being used more extensively by contractors every day, due to the ease with which material can be transported from one job to another. They can also be successfully used in bringing material to a job, where it would ordinarily be an item of considerable expense to transport it by a truck or by wagon.

## THE CONTRACTOR'S SPECIAL

## SPECIFICATIONS

**Body**—Rack style; 86 inches long, 42 inches wide, 16 inches deep inside; removable sides and ends.

**Wheels**—1 1/2 inch spoke, 34 inches high.

**Axle**—1 1/4 inch special high carbon steel; 1 1/2 inch spindle.

**Springs**—43 inches long, 1 1/2 inches wide, 6 plate, with extra heavy shackles and axle clips.

**Draw-Bar**—Heavy pole, reinforced with steel; adjustable to any height auto frame.

**All-Way Coupling**—Universal joint with shock-absorbing springs. Compact—durable—safe. Takes up all vibration from the car. Trailer can be instantly attached or detached from the car by removing one pin—no tools necessary.

**Painting**—Brewster green.

**Attachments**—Bracket fastens to frame of car—above the springs—taking advantage of full spring action from the car and removing all vibration from draw-bar and Trailer body.

**Capacity**—1200 pounds.

**Weight**—Crated, ready for shipment, 375 pounds.

**Model 32**—Extra heavy ball bearings; 1 1/4 inch steel tires.

**Model 33**—Extra heavy ball bearings; 1 1/2 inch solid rubber tires.

**Model 34**—Extra heavy ball bearings; 1 1/4 inch steel tires; 6 inch drop axle.

**Model 35**—Extra heavy ball bearings; 1 1/2 inch solid rubber tires; 6 inch drop axle.

## EVERY TRAILER EQUIPPED WITH UNIVERSAL CONNECTION ROD

## List Prices

## Delivery Style of Body

Model 22—Box bearing, 1 1/4 inch solid rubber tire.....	\$45.00
Model 23—Ball bearing, 1 1/2 inch round edge steel tire.....	50.00
Model 24—Ball bearing, 1 1/4 inch solid rubber tire.....	57.00

## Rack Style of Body

Model 32—Ball bearing, 1 1/4 inch round edge steel tire.....	\$67.00
Model 33—Ball bearing, 1 1/2 inch solid rubber tire.....	77.00
Model 34—Same as Model 32, with 6 inch drop axle.....	72.00

## WINDOW SCREEN, WIRE CLOTH, PERF. SHEET BRASS

## WINDOW SCREEN WIRE CLOTH

**Black Painted Cloth** is finished in the best jet black enamel paint, put on by a special process. The best materials obtainable are used, presenting a brilliant glossy surface. The paint will not flake off, a trouble too common with many brands.

**Galvanized or White Metal Screen Wire Cloth** is made from specially prepared Hot Galvanized wire.

**Bronze Screen Wire Cloth** is woven from the best grade of bronze wire, and has been especially prepared for the resistance of the action of salts, acids, gases and all kinds of atmospheric conditions. Made in both antique and Golden Bronze.

Roll of Window Screen Wire Cloth wrapped and labeled for shipment. Double Selvage

## WINDOW SCREEN WIRE CLOTH

## 12 MESH

Stock sizes: 18 inches to 48 inches inclusive, even inches.

Black Painted Cloth, No. 33 and 34 Wire.....per 100 sq. ft. \$2.50  
Galvanized Cloth, No. 33 and 34 Wire....." 3.30

For widths over 48 inches, \$0.50 per 100 sq. ft. advance and widths under 18 inches wide, \$0.10 per 100 sq. ft. advance over regular width.

## 14 MESH

Galvanized Cloth, No. 33 and 34 Wire.....per 100 sq. ft. \$3.80  
Golden Bronze Cloth, No. 31 and 32 Wire....." 13.00

When ordering, always specify finish, width and mesh.

## PERFORATED SHEET BRASS

We carry the perforations illustrated in stock in widths suitable for covering the different sizes of pipe.

## BAR BENDERS—CONCRETE REINFORCEMENTS

## REINFORCING WIRE

Galvanized before Weaving  
Galvanized after Weaving

In ordering specify width, size of mesh, gauge of wire and whether galvanized before or galvanized after weaving is wanted.

All widths, 12 to 72 inches.

In rolls of 150 lineal feet.

Special widths up to 96 inches to order without extra charge if ordered in lots of five rolls or over of each special width.

## METAL LATH

Fig. 611B

Price governed by market conditions. On application.

## STEEL BARS FOR REINFORCED CONCRETE

Fig. 611C

Round, plain and twisted square bars of high tensile strength.

Price governed by market conditions. On application.

## CARPENTER'S "WATERLOO" REINFORCING BAR BENDING MACHINE

Fig. 611D

A durable, substantially constructed machine so arranged to bend reinforcing bars to various angles for all purposes in concrete work. The bending posts are constructed of turned steel. The post revolving through the slot in the plate, being equipped with loose steel roller to avoid creeping of bar in bending.

The machines are furnished with a detachable handle seven feet long for convenience in handling. Bars can be bent to a more uniform angle than by any other method and get the maximum strength as designed by the engineer.

Made in two sizes. Guaranteed to bend bars as follows:

No. 2 bends cold reinforcing bars including 1 1/2 inch, round or square.

No. 3 bends cold reinforcing bars including 1 1/4 inch, round or square.

No. 2 Bar Bending Machine, without stand, weight 110 lbs. .... \$18.00

No. 3 Bar Bending Machine, without stand, weight 210 lbs. .... 23.00

No. 2 Bar Bending Machine, with steel stand, weight 200 lbs. .... 28.00

No. 3 Bar Bending Machine, with steel stand, weight 300 lbs. .... 33.00

## SLEEPER CLIPS

Fig. 612A

Fasten wood sleepers to I-beams. Drives like a nail. Saves time and labor.

Prevents buckling and warping of wooden sleepers, insuring smooth and solid floors.

Applied quickly. Hook form and U form in the following:

2 1/4 inch, 25 lbs. .... per 1000 \$....

3 1/4 inch, 30 lbs. .... " " " " " "

4 1/4 inch, 35 lbs. .... per 1000 ECB ....

5 1/4 inch, 42 lbs. .... per 1000 L I B ....

6 1/4 inch, 50 lbs. .... per 1000 ....

Used by all the large contractors and in the most modern up-to-date buildings. Special sizes and longer lengths to order. Prices quoted on application.

Fig. 612B

## WIRE CLOTH, SCREENING AND NETTING

In ordering Wire Cloth always specify the mesh, size of wire, width and quantity desired.

Above, Fig. 487A, 2x2 Inch Mesh

2	7.50	6.75	7.50	8.00
2 $\frac{1}{2}$	8.25	7.50	8.25	8.75
3	9.00	8.25	9.00	9.50

Brass Bolts and Nuts made to order same sizes as above. List prices double those for Steel.

Prices for Ornamental Cap Nuts on application.

## Method of Inserting Siamese Bolts

Cut illustrates the four steps followed in attaching article A to metal partition B-B.

## TWIN EYES

MADE WITH  
CLOSED  
RING,  
OPEN AND  
CUT SIDES.

ADJUSTABLE  
STOP ARMS  
AND  
CLAMPS

For fastening Awning, Rods, Wires, Suspended Lights, Show Cards, etc.

Price per 100 for Steel Eyes, Galvanized

$\frac{1}{4}$ inch Eye Closed Ring	\$5.00
$\frac{1}{2}$ inch Eye Closed Ring	5.50
$\frac{1}{2}$ inch Eye Open or Cut Side	6.50

Brass Eyes made to order, same size as above.

List price double those for Steel.

## STEEL TOGGLE BOLTS

With Double-Flanged Sides and Rigid Back

STEEL TOGGLE BOLT

HOOD RIVETED ON

For securing brackets and fixtures to hollow tiling, marble slabs, steel ceilings or plastered walls where screws or nails fail to hold.

The  $\frac{1}{8}$  inch size, as shown above, can be pushed through a  $\frac{3}{8}$  inch hole and instantly securely anchors itself.

By turning it half way around it will come out, or by pushing it up it will drop out.

Length of Screw inches	Diameter of Screw, inches						
	5/32	3/16	1/4	5/16	3/8	7/16	1/2
2 $\frac{1}{2}$	...	3.30	5.00	...	...	...	...
3	\$3.30	...	5.00	6.50	7.50	...	...
3 $\frac{1}{2}$	...	3.30	5.30	...	...	...	...
4	3.30	3.30	5.50	7.00	8.00	10.50	12.00
5	...	3.60	5.70	7.50	8.50	11.00	12.50
6	...	3.80	6.00	8.00	9.00	11.50	13.00

The above are stock sizes; special sizes furnished to order.

Siamese Twin Bolts and Eyes are simple, effective, reliable. For use on construction that is inaccessible from the rear and where the head of the bolt cannot be secured. They serve to fasten window shades, awning brackets and hoods, signs, ornaments, hooks, electrical devices, etc., to hollow metal, metal sash, frames and door trim, skylights, ceilings, wainscoting, etc.

# CONCRETE INSERTS—CONCRETE PIPE DRILLS

## CONCRETE INSERTS

Fasten to the Form—Then Pour the Concrete

Fig. 841

### Made in two styles—

For use with regular Machine Bolts and Machine Screws, or with Lag Screws and Wood Screws. The Insert consists of a malleable iron Anchor, with corrugations formed to firmly engage the concrete, and threaded for either bolts or screws, and a wooden plug used for attaching the Insert to the forms.

To Use: Fasten the wooden plug to the form with a nail or a screw, then press the Insert over the plug, thus securely and accurately attaching it to the form. After the concrete has been poured and the forms removed, the Insert is ready for use. The wooden plug comes away with the form, leaving a neat finish and a clean entrance into the Insert for a bolt or screw. If preferred, the Insert may be fastened to the form without using the wooden plug; they may be nailed or tacked through the lugs provided at the top flange and base.

### Fig. 841B ADJUSTING FIXTURE FOR USE WITH INSERTS

While Inserts can be placed with absolute accuracy, making adjustment unnecessary, occasion may arise where through carelessness or otherwise, adjustment is required and for this purpose the above fixture will be found satisfactory, easy to place and will make a neat finish.

### Fig. 841C PIPE DRILLS

The drill heads are threaded to fit any gas pipe, which serves as a handle. The heads are of the strongest, yet lightest construction, making them ideal for carrying in a tool kit. Quite a range of sizes can be so carried as they weigh practically nothing.

### Sizes and List Prices—Drill Heads Only

## WALL TIES, BRICK BONDS AND WALL ANCHORS

Every brick wall should be reinforced and tied by means of a wall tie. The cost is slight and the benefit derived is very great in the construction of the wall.

Fig. 18A. Ideal Crimped Galvanized Wall Tie

Fig. 18B. Ideal Corrugated Galvanized Wall Tie

Figs. 18A and 18B Ideal flat crimped or the corrugated wall ties are made of galvanized metal and are 6½ inches long. The deep crimp or corrugations make these ties a perfect bond for the wall.

Holes are punched in the end so the tie can be bent up if desired and used for veneer work.

1000 Wall Ties packed in box.

Per M .....\$2.20

(There are 1000 Wall Ties to a box)

5000 Wall Ties packed in bulk.

Per M .....\$2.00

(A barrel contains about 5000 Wall Ties)

## GENUINE HERRINGBONE WALL TIES

Heavy Gauge

## PIN ANCHORS

The most practical, easy-to-apply anchor on the market. Standard size is 1x3/16x14 inches. These anchors are used in large quantities on nearly every brick job that goes up. We are prepared to make up on short notice, any quantity or size. Prices quoted upon receipt of specifications, being based upon market prices of iron, and quantity ordered.

## JOIST HANGERS, INSERTS AND CLAMPS

Pat. applied for.

Fig. 19A  
(Slotted to allow bolt adjustment)

## IDEAL CONCRETE INSERT

Made of pressed steel and forms the best insert for attaching shaft hangers, sprinkler systems and other fixtures to concrete ceilings, slabs, walls, etc.

Set on the forms before pouring the concrete. Nail holes are provided in the arms so the insert can be fastened securely to the form. The concrete flows entirely around the insert, leaving the slotted opening at the bottom flush with the surface of the concrete.

The slotted hole allows full adjustment of the bolt.

Inserts carried in stock for  $\frac{1}{2}$ ,  $\frac{5}{8}$  and  $\frac{3}{4}$  inch bolts.

## I-BEAM CLAMPS

These clamps are furnished with nuts and bolts and furnished with eye-bolts, for adjustable rings, also hook eyes for adjustable rings when so ordered. Price depends on quantity and specifications.

FOR OTHER STYLES OF CONCRETE AND BUILDING SPECIALTIES SEE INDEX

## COLUMN CLAMPS

Key in Use

K. & W.  
PERFECTION  
COLUMN CLAMPS

THE ONLY CLAMP WITH  
PERFECT ADJUSTMENT

Clamp in Use

USED FOR

SQUARE, RECTANGLE, OR OCTAGON CONCRETE FORMS

IMPORTANT POINTS ABOUT PERFECTION CLAMPS

All cuts show correct way of using "**PERFECTION**" clamps when lumber in forms is of the same thickness. Should lumber vary in thickness, those variations in the thickness are provided for by turning outward the slot in the bend of the clamp. You have used clamps on your concrete forms. Now, study these cuts and you at once see the advantages of the "**PERFECTION**" over all others.

**NOTE:**—Easier to handle, store and ship. No lost space. Perfect adjustment. Can not wear out or break. No slides to rust or clog up. Lasts longer. Only tool required is a hammer. Pay for themselves on one job by the saving in labor. Most important part of your equipment.

## FACTS ABOUT COLUMN CLAMPS

The clamps here illustrated are the only clamps manufactured with a perfect adjustment. They are a bigger-money maker for the contractor than any other part of his equipment. You have a concrete mixer because you know by actual experience that you can save money over the old way of mixing concrete by hand. Then why not metal column clamps and save the labor of making wood clamps? Save the price of buying long iron bolts, save the time of having the threads of bolts gone over each time they are used on another job. Save the expense of handling and the space they take up, and the expense of a wood clamp bursting and destroying a whole column. **No progressive or modern contractor can afford to be without these column clamps.** Order today and begin to save money on your next concrete job.

**They will fit any size column.** The arms are made of the best selected mild steel. Using  $2\frac{1}{4} \times \frac{5}{16}$ -inch steel in the clamps for 12 to 26-inch columns;  $2\frac{1}{2} \times \frac{5}{16}$ -inch steel in clamps for 18 to 32-inch columns. They can be used with any other make clamp. They have a perfect adjustment.

The following are Column Sizes carried in stock.

No. 1. 12 inch to 26 inch column adjustment. List Price per set. **\$4.50**

No. 2. 18 inch to 32 inch column adjustment. List Price per set. **5.50**

Complete Column

## CONCRETE FORM CLAMPS

## UNIVERSAL FORM CLAMPS

Fig. 4  
Universal

The clamp itself is a simple patented casting with a flanged bearing surface, an oval hole with shoulders at the small side of opening through which a plain bar is passed. There is a set screw threaded into the large side of opening and perpendicular to same, to engage the rod intermediate of the shoulders, so as to depress the rod between the shoulders. The depression of the rod between the shoulders insures the clamp against slipping or moving on the rod. The set screw does not carry the load, it merely holds the rod in the depression, so as to allow the shoulders to carry the load.

## ADVANTAGES

No threaded bolts, nuts, washers, twisted wires, special devices, bulging forms, and, besides, they save 50% of your labor cost of clamping or fastening forms.

## DESCRIPTION

The rod clamps are made in six sizes, namely: No. 1 for  $\frac{1}{4}$  and  $\frac{5}{16}$  inch rods; No. 2 for  $\frac{3}{8}$  inch rods; No. 3 for  $\frac{1}{2}$  inch rods; No. 4 and No. 4 Extra Heavy for  $\frac{5}{8}$  inch rods. The No. 4 is recommended for column clamping and No. 4 Extra Heavy for large retaining walls. The No. 5 clamp is for  $\frac{3}{4}$  inch rods and is used only for heavy work.

## PRICE LIST—CLAMPS

Size	Size of Rod inches	Base Diameter inches	Length inches	Weight per 100	Cost per 100	Size	Size of Rod inches	Base Diameter inches	Length inches	Weight per 100	Cost per 100

No. 4\* Extra Heavy.

Fig. 1  
Open

## WIRE CLAMPS

Where the work does not call for rods and rod clamps, the Universal Wire Clamp is the device to use. The Universal Wire Clamp makes wiring cheap from a labor and material standpoint of view, considering only the cost per tie. This wire clamp can be placed and locked in place in less than 10 seconds. It is the safest and most efficient wire tightening device on the market. We recommend the wire clamp only for light wall work or for work where the actual load per clamp will not exceed 600 lbs. on a No. 9 annealed wire.

Fig. 1  
Closed

## ADVANTAGES OVER TWISTED WIRES

Put on and clamped in 10 seconds. No boring of holes necessary. No wood wedges. No twisting of wires. No man necessary inside of narrow forms. Can be removed in 3 seconds. Lower in first cost than any other device on the market. One piece and no tools necessary. One size clamp for any size form. One clamp only for each complete form tie. Adds maximum efficiency to wire forms. Locks automatically and guaranteed not to slip.

The amount of takeup is about 1  $\frac{1}{2}$  inches in each strand of wire, which insures very crooked wires of being drawn up tight. In case wires are straight or in thin walls the 1  $\frac{1}{2}$  inch takeup may be too much. In this case allow the wires to slip through slots until handle is at an angle of 45° before locking. In this way the maximum takeup can be reduced to suit conditions.

List price ..... per hundred \$12.00

## PRICE LIST—TIGHTENING WRENCHES

## STRUCTURAL SHAPES—MILD STEEL

### STANDARD CLASSIFICATION OF NET EXTRAS

#### ANGLES

Sizes—	Net extra per 100 lbs.
$1\frac{1}{2}$ x $1\frac{1}{2}$ " and wider, but under 3" wide; by $\frac{3}{16}$ " and heavier.....	\$0.10
$1\frac{1}{2}$ x $1\frac{1}{2}$ " and wider, but under 3" wide x $\frac{1}{8}$ ".....	.15
1 x 1 to $1\frac{1}{4}$ x $1\frac{1}{4}$ " x $\frac{3}{16}$ " and heavier.....	.15
1 x 1 to $1\frac{1}{4}$ " x $1\frac{1}{4}$ x $\frac{1}{8}$ ".....	.20
$\frac{7}{8}$ x $\frac{7}{8}$ " x $\frac{3}{16}$ ".....	.20
$\frac{7}{8}$ x $\frac{7}{8}$ " x $\frac{1}{8}$ ".....	.25
$\frac{3}{4}$ x $\frac{3}{4}$ " x $\frac{3}{16}$ ".....	.25
$\frac{3}{4}$ x $\frac{3}{4}$ " x $\frac{1}{8}$ ".....	.30
$\frac{5}{8}$ x $\frac{5}{8}$ " x $\frac{1}{8}$ ".....	1.10
$\frac{5}{8}$ x $\frac{5}{8}$ " x $\frac{3}{32}$ ".....	1.30
$\frac{1}{2}$ x $\frac{1}{2}$ " x $\frac{1}{8}$ ".....	1.60
$\frac{1}{2}$ x $\frac{1}{2}$ " x less than $\frac{1}{8}$ ".....	1.80
3" on one or both legs by less than $\frac{1}{4}$ " thick.....	.35

Unequal leg angles are subject to special prices, which will be furnished on application.

#### CHANNELS

Sizes—	Net extra per 100 lbs.
$1\frac{1}{2}$ " and wider, but under 3" wide; by $\frac{3}{16}$ " and heavier.....	\$0.15
$1\frac{1}{2}$ x $1\frac{1}{2}$ x $\frac{3}{16}$ (Box Channel—Special).....	.30
$1\frac{1}{2}$ " and wider, but under 3" wide x $\frac{1}{8}$ ".....	.25
1 to $1\frac{1}{4}$ " x $\frac{3}{16}$ " and heavier.....	.25
1 to $1\frac{1}{4}$ " x $\frac{1}{8}$ ".....	.35
1 to $1\frac{1}{4}$ " x $\frac{7}{16}$ ".....	.50
$\frac{3}{4}$ and $\frac{7}{8}$ " x $\frac{3}{16}$ " and heavier.....	.30
$\frac{3}{4}$ and $\frac{7}{8}$ " x $\frac{1}{8}$ ".....	.40
$\frac{3}{4}$ and $\frac{7}{8}$ " x $\frac{3}{32}$ ".....	.55
$\frac{5}{8}$ x $\frac{1}{8}$ " and heavier.....	1.20
$\frac{5}{8}$ x $\frac{3}{16}$ ".....	1.40
$\frac{1}{2}$ x $\frac{3}{16}$ " and heavier.....	1.80
$\frac{1}{2}$ x $\frac{3}{16}$ ".....	2.00

#### TEES

Sizes—	Net extra per 100 lbs.
$1\frac{1}{2}$ x $1\frac{1}{2}$ " and wider, but under 3" wide; by $\frac{3}{16}$ " and heavier.....	\$0.20
1x1 to $1\frac{1}{4}$ x $1\frac{1}{4}$ x $\frac{3}{16}$ " and heavier.....	.40
1x1 to $1\frac{1}{4}$ x $1\frac{1}{4}$ x $\frac{1}{8}$ ".....	.50
$\frac{7}{8}$ x $\frac{7}{8}$ x $\frac{3}{16}$ ".....	.50
$\frac{7}{8}$ x $\frac{7}{8}$ x $\frac{1}{8}$ ".....	.60
$\frac{3}{4}$ x $\frac{3}{4}$ x $\frac{3}{16}$ ".....	.60
$\frac{3}{4}$ x $\frac{3}{4}$ x $\frac{1}{8}$ ".....	.70
$\frac{5}{8}$ x $\frac{5}{8}$ x $\frac{1}{8}$ ".....	1.30
$\frac{1}{2}$ x $\frac{1}{2}$ x $\frac{1}{8}$ ".....	1.80

Unequal leg tees are subject to special prices, which will be furnished on application.

#### HEXAGONS

Sizes—	Net extra per 100 lbs.
$\frac{3}{4}$ to 3".....	\$0.15
$\frac{5}{8}$ to $\frac{11}{16}$ ".....	.25
$\frac{1}{2}$ to $\frac{9}{16}$ ".....	.35
$\frac{7}{16}$ ".....	.55
$\frac{3}{8}$ ".....	.65
$\frac{1}{8}$ ".....	.75
$\frac{1}{4}$ ".....	1.00

#### HALF ROUNDS

Sizes—	Net extra per 100 lbs.
1 to 3".....	\$0.20
$\frac{3}{4}$ to $\frac{11}{16}$ ".....	.35
$\frac{5}{8}$ to $\frac{11}{16}$ ".....	.50
$\frac{1}{2}$ to $\frac{9}{16}$ ".....	.70
$\frac{3}{8}$ to $\frac{7}{16}$ ".....	1.10

We can furnish a large assortment of I beams direct from Chicago stock.

**FOR CUTTING AND QUANTITY SCHEDULE, SEE INDEX**

# QUANTITY DIFFERENTIALS AND SCHEDULE OF CUTTING EXTRAS

## QUANTITY DIFFERENTIALS

All specifications for less than 2000 lbs. of a size will be subject to the following extras, the total weight of a size ordered, to determine the extra, regardless of length and regardless of exact quantity actually shipped.

Quantities less than 2000 lbs., but not less than 1000 lbs. ....	\$0.15
Quantities less than 1000 lbs. ....	.35
Straightening	
	Net extra per 100 lbs.

Machine straightening ..... \$10  
Machine Cutting Rounds and Squares 1 1/2 inches and Larger to Specified Lengths

Lengths over 48 inches. ....	\$0.15
Lengths over 24 inches to 48 inches, inclusive. ....	.25
Lengths over 12 inches to 24 inches, inclusive. ....	.35
Lengths of 12 inches and less, extra will be furnished on application, but will not be less than. ....	.45

The above extras apply only to .50 Carbon and under. Extras for Machine Cutting over .50 Carbon will be furnished on application.

Extras for Machine Cutting Rounds and Squares under 1 1/2 inches, Flats, etc., will be furnished on application.

## Cutting to Specified Lengths Other than Machine Cutting

	Net extra per 100 lbs.
Lengths of 60 inches and over. ....	No Charge
Lengths over 48 inches to 59 inches, inclusive. ....	\$0.05
Lengths over 24 inches to 48 inches, inclusive. ....	.10
Lengths over 12 inches to 24 inches, inclusive. ....	.20
Lengths of 12 inches and less, extra will be furnished on application, but will not be less than. ....	.30

## WAREHOUSE CUTTING EXTRAS

For the convenience of customers, we print below standard card extras for cutting, which will be added to current prices on material where special cutting is required.

Charging Unit, 100 Lbs.	3' and over	2' to 3'	1' to 2'	6" to 1'	4" to 6"	2" to 4"
Beams and Channels, 3" and over. ....	\$0.00	\$0.15	\$0.30	\$0.85	\$1.40	\$2.30
Zees. ....						
Tees, 3" and over. ....						
"H" Sections. ....						
Angles, 2x2x 3/8" and larger. ....	.00	.10	.20	.30	.50	.75
Mild Steel Rounds and Squares, 2" and under. ....	.20	.20	.30	.50	.65	.80
Mild Steel Rounds and Squares over 2". ....						
Flats, 1/4" thick and over. ....						
Angles, under 2x2x 3/8", also 2" to 3" wide by 1/2" thick. ....						
Channels, under 3". ....	.30	.30	.40	.85	1.40	2.30
Tees, under 3". ....						
Forging Rounds. ....						
Free cutting Rounds. ....						
Plates, 3/8" and over:						
To length only. ....	.00	.10	.20	.30		
To length and width. ....	.20	.30	.40	.50		
Sketch Plates, 3/8" and over. ....	.25	.35	.45	.55		

Plates Sheets	Cutting to and over	Length 6' to 1'	Splitting to 6" and over in width	Splitting to Width of 6" and over and Cutting to Length	
				1' and over	6' to 1'
Plates No. 8. ....	\$0.20	\$0.40	\$0.20	\$0.40	\$0.60
Sheets No. 10. ....	.25	.45	.25	.45	.65
Sheets No. 12. ....	.30	.50	.30	.50	.70
Sheets No. 14. ....	.35	.55	.35	.55	.75
Sheets No. 16. ....	.40	.60	.40	.60	.80

Reinforcing Bars Cut 1' 0" and longer, net weight:

3/4" and over. ....	\$0.15
5/8", 1 1/2", 1", 3/4". ....	.20
3/8" and smaller. ....	.25
Sheets, Nos. 18 and 20. ....	
Sheets, all gauges, cut to sketch. ....	
Plates, No. 8, cut to sketch. ....	
Billets. ....	
Light Flats and Bands, which include all gauges 3/8" and lighter. ....	

Prices on request

The above cutting charges apply where the waste in material is not excessive, and are subject to change without notice.

## TOOL STEEL

In listing the following grades of Tool Steel, we have selected only those which our experience has shown to be the best suited for various purposes. There are many brands and grades of Tool Steel which compare favorably with those we list, but none of them are better.

If you do not find a Steel in this list which will cover your needs, write us, giving full information and we shall be pleased to recommend that which we know will serve you best. Our Service Department has complete data on all brands and grades.

Rex "AA" and "A." Forges easily, anneals and machines readily and responds perfectly to heat treatment. Especially recommended for lathe, planer and boring tools, taps, reamers, twist and straight drills, dies, gear cutters, special cutters, etc.

It is being extensively used for dies for forming hot iron and steel, and for certain classes of tools for stone work, woodworking knives, etc.

Furnished in any length bars, annealed or unannealed, rounds, squares, octagons, flats, blocks, also tool holder sizes hardened ready for use.

**Park's Self-Hardening Steel.** A standard brand of self-hardening steel, excelled only by the two brands named above for lathe, planer and boring tools, and is less expensive. It is well suited for use where machines are not fitted for highest speed or where the work is so remittent or of a character that the utmost capacity is not required.

**Silver Tool Steel.** A well known brand. A grade of tool steel of extra fine quality, especially recommended for cold chisels, cold cutters, cold sets, boiler makers' snaps, granite points, woodworking and many other kinds of edge tools, etc. Made in all temper.

**Extra Quarry Steel.** Especially recommended for rock drills, granite tools and difficult quarry work. **Black Diamond Tool Steel.** A well known and reliable brand. Recommended for axes, mining drills, quarry tools, hammers, sledges and general purposes.

**Peerless "A" Tool Steel.** A special steel developed particularly for use on hot work and principally for hot heading and forging dies for bolts and rivets, cut-offs, bull-dozing tools, swedges, hydraulic forging dies, gripping dies, track bolt work, etc. This steel has given exceptionally satisfactory results wherever used.

## TEMPERING COLORS AND TEMPERATURES IN DRAWING CARBON TEMPER STEELS

The colors which successively appear on the surface of hardened steel, slowly heated, are as follows:

Yellowish White or Light Straw	430 degrees Fahr.	Purple	530 degrees Fahr.
Dark Straw	450 degrees Fahr.	Violet	550 degrees Fahr.
Gold Color	490 degrees Fahr.	Blue (Light)	580 degrees Fahr.
Brown	510 degrees Fahr.	Blue (Dark)	600 degrees Fahr.

## TOOL STEEL PRICES

Rex "AA" High Speed Steel	Per lb. \$	Silver Tool Steel	Per lb. \$
Rex "A" High Speed Steel	"	Extra Quarry Tool Steel	"
High Speed Steel, hardened, standard sizes	"	Black Diamond Tool Steel	"
Lengths for tool holders	Per lb.	Peerless "A" Alloy Tool Steel	"
Park's Self-Hardening Tool Steel	"		

## BASE SIZES

Round, Square and Octagon— $\frac{1}{8}$  inch to 2 inches inclusive

Flat— $\frac{1}{8}$  inch to 2 inches thick by  $\frac{1}{8}$  inch to 2 inches wide

All dimensions inclusive. Intermediate sizes take the next higher extra.

## RIVETS

## LIST OF BASE SIZES AND EXTRAS

Adopted March 7, 1905; April 18, 1906; October 15, 1912

Fig. 620A  
Button HeadFig. 620B  
Countersunk HeadFig. 620C  
Flat HeadFig. 620D  
Cone Head

## BASE SIZES

Boiler Rivets, standard heads.  $\frac{3}{4}$  inch diameter to  $1\frac{1}{4}$  inch diameter inclusive. 2 inches to 5 inches in length inclusive.Structural Rivets, standard heads.  $\frac{3}{4}$  inch diameter to  $1\frac{1}{4}$  inch diameter inclusive. 2 inch to 5 inches in length inclusive.

Above in kegs or bags, weighing approximately 200 to 300 pounds.

## Standard Extras

	Per 100 lbs.
1— $\frac{1}{4}$ inch and $\frac{3}{8}$ inch in diameters.....	\$0.50
2— $\frac{1}{2}$ inch and $\frac{3}{4}$ inch in diameters.....	.15
3—Rivets larger than $1\frac{1}{4}$ inches in diameter..	.25
4—Lengths 1 inch and shorter.....	.50
5—Lengths between 1 inch and 2 inches.....	.25
6—Lengths over 5 inches.....	.25
7—Flat Head Rivets.....	.25
8—All Standard Countersunk Head Rivets....	.25
9—Swell Necks.....	.25
10—Special Heads other than regular stand- ards, minimum charge.....	.25
11—Cold or Hot Made Solid Die Rivets, when specially specified.....	.25
12—Annealing Cold Made Rivets, $\frac{1}{2}$ inch diameter and larger.....	.35

	Per 100 lbs.
13—Small orders for miscellaneous sizes for less than two tons.....	.10
14—Rivets packed in 100 lb. packages.....	.10
15—No shipments made of less than 100 lbs. of one size. If customer must have small odd quan- tities less than 100 lbs. for each keg broken to fill such quantities, \$0.50 extra.	
16—All Cone and Countersunk Head Rivets to be charged at Boiler Rivet Price.	
17—Cost of testing and inspection, if any, to be at customer's expense.	
18—High Carbon, or Special Alloy Rivets, special extra price upon application.	

## SPECIAL NOTICE

We carry a large stock of structural and boiler rivets at all times and can make prompt shipment. Orders should specify by pounds and designate size of package wanted—if large (200 to 300 lbs.) or small (100 lbs.)

3d	1 1/8	15	778	.75
3d light	1 1/8	16	1015	.90

Lathers carry the nails in the mouth while at work and it is, therefore, from the standpoint of health sanitation, necessary to have the nails free from all injurious substances. Polished or bright nails cannot be made or kept entirely clean owing to process of manufacture as well as the effect of atmospheric conditions.

## BERRY-BOX NAILS

Fig. 656B

Diamond or Needle Point, Barbed Flat Head

Size inches	Length inches	Gage No.	Approx. Number to lb.	Extra over Base Price

## FINE STEEL WIRE BRUSHES

These brushes take the place of sand paper, steel wool and similar abrasives and enable the user to do quicker and better work. They are very durable, being made of the best tempered steel wire.

## ECONOMY WIRE WHEEL BRUSHES

Fig. 3314. One Section of Filler

Patented  
June 5th  
1906

Fig. 50C. Complete Brush, Ready for Use

Fig. 50C "ECONOMY" STEEL WIRE WHEEL BRUSHES COMPLETE  
Including Metal Hubs

No.	Diam. of Brush inches	Width of Face inches	Diam. of Hub inches	Bearing on Shaft inches	Approximate Weight lbs.	Wire No.	List, each
50C	15	2½	6¼	2½	16	33	\$12.00
53C	12	2	5	2½	9½	34	10.50
54C	10	1¾	5	2½	8¾	35	9.50
55C	8	1½	4	2	4½	36	8.50

When ordering, state size of arbor hole required.

No. 50C regularly made for arbors 2 inches in diameter and smaller.

Nos. 53C and 54C for arbors 1¼ inches diameter and smaller.

No. 55C for arbors 1 inch diameter and smaller.

For larger sized arbors, there will be an additional cost.

To insure best results and longest service, "Economy" Wire Wheel Brushes, when used on figured castings, should be speeded as follows:

		Revolutions per minute			Revolutions per minute
No. 50C.	15 inches diameter.....	1200 to 1600	No. 54C.	10 inches diameter.....	1800 to 2100
No. 53C.	12 inches diameter.....	1500 to 1800	No. 55C.	8 inches diameter.....	2100 to 2400

Where employed on plain, smooth surfaces, they should be run at somewhat higher speed.

Operators should be instructed not to use too much pressure in applying the work to the brush. If run at proper speed, the wire will stand out stiff, presenting a sharp scratching surface and the brush will give better results and last much longer where the work is applied moderately.

Fig. 3314 STEEL WIRE SECTIONS FOR "ECONOMY" WHEEL BRUSHES

No.	Style	For Hub, No.	Diam. Sections inches	Sections per set	Wire No.	List, per set
3314	Steel	50C	15	6	33	\$6.00
3411	Steel	53C	12	5	34	5.00
358	Steel	54C	10	5	35	4.50
364	Steel	55C	8	4	36	3.60

## WIRE GAUGES

To avoid confusion, when referring to special sizes of wire please specify, in addition to the gauge number, which one of the several common "Standard" gauges you refer to.

Our Standard Table for steel wire for these brushes is the Washburn and Moen Gauge.

## HAND CASTING BRUSHES

Fig. 933C

Fig. 933B

Fig. 933D

Fig. 933D  
Handle

## Fig. 933A. INLAND LAKE PLAIN WAREHOUSE BROOMS

All corn; three sewed; steel banded. A first class broom in every way.	price per doz.	\$7.20
32 lb.	price per doz.	8.50
36 lb.	price per doz.	8.50

## Fig. A933A. "INLAND LAKE" CABIN OR HOUSE BROOM.

(Not Illustrated)

Much lighter in weight, but similar in appearance to our "Inland Lake" all corn warehouse broom.	price per doz.	\$7.20
--	----------------	--------

## Fig. 933B. INLAND LAKE CLAMPED CORN BROOM.

An all-corn warehouse broom. Undoubtedly the best factory and warehouse broom on the market. Impossible for the handle to come loose or the corn break in the shoulder, because the clamp is put on under 10,000 lbs. pressure.

32 lb.	price per doz.	\$7.20
36 lb.	price per doz.	8.50

## Fig. A933B. THE ZIMMERMAN STEEL CLAMPED MIXED BROOM.

(Not Illustrated)

Same construction as our Inland Lake brand. Instead of corn it is filled with bamboo split or rattan, as desired. A very sturdy article.	price per doz.	\$7.20
32 lb.	price per doz.	8.50
36 lb.	price per doz.	8.50

## Fig. 933C. "SPRING MAID" BROOMS.

For either house, store or factory use. Made of bass fibre, with a detachable handle, which permits replacing of brooms when worn out; this is fitted with a piece of flexible steel which gives great elasticity. Width, 12 inches.

List price complete.	per doz.	\$12.00
List price, extra brooms.	each	.75

## Fig. 933D. "INLAND LAKE" R. R. SWITCH BROOM.

These brooms are used by all railroads for removing snow from switch joints. Made of cane or rattan. End of handle fitted with chisel point for cleaning out frogs.

Price, with Chisel Point.	per doz.	\$8.00
Price, without Chisel Point.	per doz.	7.00

Fig. 933E

## O-CEDAR MOP

For dusting, cleaning and polishing hardwood floors, standing woodwork, doors and large furniture. Also excellent for oil cloth and linoleum covered floors. Is treated with O-Cedar Polish and can be cleaned, washed and renewed. Has the handy handle hinge and long handle, making it easy to clean those hard-to-get-at places, such as the tops of doors, mouldings, under heavy furniture, etc. This mop is substantially made and will stand hard and constant use. Each mop comes in lithographed tin with full directions for cleaning and renewing.

List price, large size.	\$1.25
Small size	.75

## BRUSHES SET IN RUBBER—INLAND LAKE

The "holding parts" of Inland Lake Brushes are all metal, and the bristles, ferrule and handle are forced together under high pressure, making it impossible for the brushes to "shed bristles" or come apart, no matter how long the dealer may carry them in stock. They are absolutely guaranteed to hold and to work satisfactorily in paint, varnish, shellac, hot glue, or any other mixture or preparation that will not injure or destroy the bristles. They are the neatest Brush on the market, and the easiest for the mechanic to keep clean. The strongest metal bound Brush in the world. They will wear up closer without becoming stiff or stubby. They will not "finger" or "swallow tail."

## INLAND LAKE (RUBISTO) FLAT VARNISH BRUSH

Fig. S71A

Best selected Chinese bristles, chisel pointed, extra long and heavy. Nickel bound, oval handle.

Width, inches	Length of Hair inches	Price each

## MOP WRINGER

A compact, strong mop wringer. Feet are concave and will not scratch or mar floors. Rolls are made of thoroughly seasoned hard maple. Frame is made of Bessemer Rolled Steel. A sanitary wringer for sanitary purposes. Price each .....\$3.50

## PRESERVO

Colors, Brown and White

This waterproofing preparation has proven very satisfactory for covering canvas material of all kinds. It makes the material to which it is applied very soft and pliable and will keep it from mildewing in any climate. It does not freeze in cold weather and has been found very satisfactory when used in the Arctic regions.

Put up in . . . . .	Bbls.	5 gals.	1 gal.	1/4 gal.
Price .....	\$1.00	\$1.20	\$1.10	\$0.40

## USES OF PRESERVO

Awnings, Bags, Baskets, Beltings, Blankets, Buildings, Cases

Land Use—Brewery mats, shipping and storing covers for agricultural machinery, etc., haystacks, contractors' uses, wagons, horses, saddles, packs, road rollers, guns, army stores, protection of fruits from frost, bales of all kinds, umbrellas, milk cans, ice cream pails, outside steam-pipe covers, ash-can covers, fertilizer bags, curtains, cushions, flags, furniture, harness, hose, mudguards, nets, packings, shades, sails, signs, tents, tops, etc.

Marine Use—Motor boat spray-hoods, laying-up covers, engine covers, dinghy covers, etc.

Larger Vessels—Hatches, binnacles, telegraphs, life boats, working boats, sounding machines, lead-lines, sails covers), decks, deckloads, skylights, rapid-fire and other naval guns, windlasses, stores, water-wings.

## PERFECTITE

Colors White and Brown

A waterproofing compound in semi-paste form. Can be thinned with gasoline, linseed oil, or any other drying oil that may be desirable to use.

On closely woven fabrics one gallon of gasoline to a pound or one and one-half pounds will make the fabric waterproof, but on open goods two pounds to a gallon of liquid should be used. One coat is usually sufficient if applied uniformly with a brush. It does not injure the fabric or material to which it is applied. It should be applied on material that is perfectly dry in order to penetrate. It is not intended to remain on the surface and give a glossy finish but to penetrate and be absorbed by the fabric, making it waterproof through and through. In cans of 1 lb., 2 lb., 5 lb., 25 lb., 100 lb.

Price, per lb. ....\$0.50

## LADDERS AND STAGES

### STAGES

Sides and slats made of clear Norway pine with hickory rungs, put together with heavy screws and made strong and safe in every respect.

Lengths 14 to 28 feet.....per foot \$0.36  
Cross bars with Lignum Vitae rollers, per pair 2.00

### PAINTERS' FALLS

We are among the largest manufacturers of Painters' Falls in the country. Send us your specifications, stating diameter of rope and length of fall. We will quote interesting prices.

All Falls are fitted with two single and two double blocks, spliced in, ready for use.

## WIRE ROPE SAFETY STRAPS AND BAILS

Illustrated on this page are the new SAFETY STRAPS AND BAILS for painters' and tuck pointers' stages, now required by the Factory Inspection Department of the State of Illinois.

This type of safety strap is the only one now permitted, and your job will be stopped if you use stages which are not equipped with the authorized wire rope straps and bails.

By referring to the engravings it will be noted that the object of the safety strap and bail is to prevent the fall of the scaffold should the 2x4 cross pieces on which it is carried break.

Should this wooden support break, the wire rope safety strap will catch and hold the platform, as the loops of the bail are held in place at each end by bolts, thus very greatly reducing the liability of accident.

We are manufacturers of these bails and straps and can furnish them promptly in any size wanted. They are made in strict conformity with the specifications laid down by the State Factory Inspection Department of the State of Illinois.

Price each .....\$6.00      Price per pair .....\$10.00

Prices do not include stages.

## TUCK POINTERS' SCAFFOLDS

A one-piece stirrup and crossbar, forged from  $\frac{5}{8}$ -inch wrought iron. Used by tuck pointers, as required by Illinois State Factory Inspection.

List price per pair, plain.....\$ 9.00

List price per pair, with rail guard.....15.00

A—Thimble.

B— $\frac{5}{8}$  inch galvanized steel running rope.

C—Splice.

D— $\frac{3}{4}$  inch bolt, 1 inch sleeve washer, 3 inches from ends of 2x4 cross piece.

E— $\frac{5}{8}$  inch safety strap (cable).

## SAFETY NETS

We also manufacture safety rope nets as provided for in Section 5 of the "Structural Safety Law" of the State of Illinois. These nets are stretched below trusses to prevent injuries to men on account of slipping or being pushed.

The State Factory Inspection report says in part: "This department recommends the adoption of these nets, not only to contractors, but also to the various State departments and City commissions, as a practical device. Contractors in Illinois are pleased with them and the workmen claim they inspire a feeling of security, which enables them to go about their work with greater freedom."

These nets are made of the best  $\frac{3}{8}$  inch Manila rope with  $\frac{3}{4}$  inch rope border. Meshes are 6 inches square. Made in strict accordance with the specifications of the Factory Inspection Department, State of Illinois. **Prices on request.**

# BINKS WHITEWASHING, PAINTING AND SPRAYING MACHINES

For Spraying Whitewash, Cold Water Paints, Insecticides, Disinfectants, Etc.

## STYLE "A"

Style "A" is one of the largest Hand Power Spraying Machines manufactured and is especially adapted for those having considerable work to perform such as warehouses, factory establishments, etc.

## EQUIPMENT

Spray Pipe complete with  $\frac{1}{4}$  inch Cock and Spray Nozzle, 1 extra Spray Tip, 200 lb. Pressure Gauge, special galvanized Sieve, Follower Wrench,  $\frac{3}{4}$  inch Discharge Cock, one length 1 inch Suction Hose and 20 feet  $\frac{1}{2}$  inch Discharge Hose. Styles A and B have the above equipment and C and D the same with exception of hose, which is 10 feet. Style B, C and D are constructed along the same practical lines as Style A, the difference being in capacity only, as follows:

Wt., lbs.	Style	Capacity	Each
100	A	Equal to the work of 30 men	\$44.00
85	B	Equal to the work of 20 men	38.00
80	C	Equal to the work of 16 men	31.00
75	D	Equal to the work of 10 men	25.00

Style "A"

## STYLE "J"

Legs can be taken off and put over barrel.

This style is one of our most popular sellers. The machine is well designed, light consistent with strength and is adapted for all spraying purposes. It is constructed of the same high grade materials throughout as our other styles having all brass working parts, Brass Ball Valves and Removable Seats. One man can operate this machine alone and from 80 to 90 lbs. pressure maintained. Capacity equal to work of six men with brushes.

## EQUIPMENT

Spray Pipe complete with  $\frac{1}{4}$  inch Cock and Spray Nozzle, Follower Wrench and 10 feet of  $\frac{3}{4}$  inch Discharge Hose. Weight 40 lbs.

Price each. . . . . \$12.60

Style "J"

## STYLE "F"

Style "F" portable, self contained. Tank made of extra heavy galvanized, 20 gallons capacity, reinforced with steel bands at top and bottom. Pump furnished has seamless brass cylinder and all brass working parts. A mechanical agitator operates at each stroke of the pump. The most efficient portable outfit manufactured, designed for transporting over rough surfaces and through narrow passageways. Truck is equipped with heavy wide faced iron wheels.

Style "F"

## EQUIPMENT

Spray Pipe complete with  $\frac{1}{4}$  inch Cock and Spray Nozzle, one extra Spray Tip, 200 lb. Pressure Gauge, special galvanized Sieve, Follower Wrench and 10 feet  $\frac{1}{2}$  inch Star Special Discharge Hose.

Weight 110 lbs. Price each. . . . . \$32.00

FOR POWER SPRAYING MACHINES, BRUSHES, PAINTS, CANS, ETC., SEE INDEX

## BINKS SPRAYING MACHINES

For the Contractor, Orchardist, Gardener, Farmers and Growers

Style No. 15

Style No. 21

Style No. 28

## STYLE No. 15

**Style No. 15.** Binks' Improved Barrel Sprayer. Has all Brass Cylinder, Brass Ball Valves, 32 inch Wheels. Dasher Agitator operates at every Stroke of the Pump. Capacity of barrel 30 gallons. Machine furnished complete as illustrated with 10 feet  $\frac{1}{2}$  inch Discharge Hose, Stop Cock, Spray Pipe and Nozzle. Net weight 90 lbs. Gross weight 105 lbs. Price.....\$25.00

## STYLE No. 21

**Style No. 21** General Purpose Sprayer. Our biggest seller. Many thousands of these machines are giving excellent service about the home, truck farm, orchards, etc. Machine is portable, well balanced, light, consistent with strength and has many improvements over other machines of a similar design. Has large Iron Air Chamber which insures a constant steady pressure, and will operate against 125 lbs. pressure. Mechanical Agitator operates at every stroke of the pump and at the same time washes all sediment from suction strainer, thus preventing any possible chance of clogging.

## EQUIPMENT

Furnished complete as illustrated and described with 10 feet Star  $\frac{1}{2}$  inch Special Discharge Hose and Couplings, Spray Pipe, complete with  $\frac{1}{4}$  inch Cock and Spray Nozzle. Price.....\$18.75

## STYLE No. 28

**Style No. 28.** Where there are a large number of trees to be sprayed and a high pressure is required, this is the best style to use. The double Fulcrum (found on this Pump only) eliminates the hard labor of pumping. It is not tiresome to maintain a pressure of 150 lbs. Cylinder 2  $\frac{1}{2}$  inch diameter, 3  $\frac{1}{2}$  inch stroke. Piston Case Bronze, outside packed. Valves and Seats. Bronze Balls. Seats cast bronze, replaceable, accessible by removing two bolts. Air Chamber, Steel Boiler Tube 6 inch diameter, 24 inches high. This size allows the operator to pump and rest alternately.

Price, each .....\$0.30

## STEEL WOOL

ONE LB. NET

Fig. 385

Steel Wool is a mass of fine fibre of steel resembling curled hair, which while sharp, does not scratch, but will cut as smoothly as the finest abrasive material heretofore used. It is the best article for rubbing off varnish, shellac, etc., for various uses where sandpaper, pumice stone and other rubbing materials are used, and doing the work quicker, hence saving time, labor and cost and making it easier for the workman, as he can do the work better and quicker.

Steel wool does not clog up or gum up and can be used to the last particle.

No. 0 is about equal to 00 sandpaper.

Per lb. ....\$0.45

Being sold in a package.

## WATER AND WEATHERPROOF COATINGS

## INLAND LAKE GRAPHITE PAINT

Equal to any and superior to most graphite paints on the market today. We fully appreciate the fact that there are as many different "best" graphite paints as there are fish in the sea, and we have no hesitancy at all in recommending Inland Lake brand as being as good, or better a value than you have ever secured for the money. A trial will at once convince you.

Bbls.	½ bbls.	5 gals.	1 gal.
\$1.40 gal.	\$1.40 gal.	\$1.45 gal.	\$1.50 gal.

INLAND LAKE CON-  
CRETE AND CEMENT  
PAINT

Ready for Use

White, cream, colonial yellow; light, medium and dark cement; stucco brown, terra cotta, stucco green.

Cement or concrete construction will absorb moisture and such discolored surfaces are very unsightly. Inland Lake concrete and cement paints will protect in a thorough manner, any exterior concrete surface, producing a uniform and pleasing surface.

Bbls.	½ bbls.	5 gals.	Gal.
\$1.85 gal.	\$1.90 gal.	\$1.95 gal.	\$2.00

INLAND LAKE CON-  
CRETE FLOOR PAINT

Ready for Use

Eight Attractive Colors

Concrete floors, no matter how smooth or carefully made, will give off a sharp dust. This is particularly objectionable in engine rooms or where machinery is operated. For economical reasons, if for nothing else, such floors should be covered with Inland Lake Concrete Floor Paint. One or two coats will save machinery from too-rapid deterioration and make an attractive and easily cleaned floor.

Bbls.	½ bbls.	5 gals.	1 gal.

INLAND LAKE  
WOOD

## PRESERVATIVE

American Substitute

for Carbollanum

Avernius Creosote

Creosote products are now being used for preservation of wood more than ever before. The use is not confined to fence posts; telegraph and telephone lines, as well as railroad ties are being treated before using, and longer and better service is being secured. Insure your pole line and posts against the ravages of decay.

Bbls.	½ bbls.	5 gals.	1 gal.

INLAND LAKE  
WAGON AND  
IMPLEMENT  
PAINT

It has been proven time after time that wagons and implements which have been painted, will not only look better but give better service because the wood is protected. A wagon and implement paint, in order to give satisfaction, must necessarily be tough and must not crack nor peel. All these points have been closely watched in the manufacture of the Inland Lake Brand and its use on your wagons and tools will mean additional service insurance.

## INLAND LAKE BLACK BOILER FRONT AND SMOKE STACK PAINT

Smoke stacks and boiler fronts subjected to very high heat, bottoms of gas holders and inner parts of tanks subjected to the action of water require a specially prepared paint. Linseed oil chars at about 500 degrees and does not withstand water as well as a special mixture. Our experience with Inland Lake Smoke Stack Black, and the high satisfactory results obtained by users of it leads us to recommend it to anyone requiring a good paint for such a surface.

Put up in....	Bbls.	1/2 bbls.	5 gal. kits	1 gal. cans
Price.....	\$0.80 gal.	\$0.85 gal.	\$0.90 gal.	\$1.00 gal.

## INLAND LAKE WATERPROOF COATING

Ready for Use

A transparent, colorless liquid for waterproofing concrete surfaces. Does not leave a film on the surface, but penetrates, closing all pores and keeping out all moisture. Does not change the color of any surface it is applied to. If a change in color is desired, use Inland Lake Concrete and Cement Paint after you put on one coat of Inland Lake Waterproof Coating.

It is not an experiment, and is in use on some of the biggest concrete jobs in the country right now. It is the best of its kind and will mean money in the pockets of anyone interested in protecting concrete work against moisture and dampness.

Put up in....	Bbls.	1/2 bbls.	5 gal. kits	1 gal. cans

## INLAND LAKE SPECIAL PAINTS

Where price is a factor, quality is sometimes the last thing thought of in offering a piece of merchandise, and the user is forced to all sorts of sacrifices as a consequence. This is not the case with Inland Lake special construction paints. These paints are good, honest, substantial, durable paints that will give you more than average service in whatever way they may be used.

## INLAND LAKE YACHT WHITE

Ready for Use

A white which is white on any other white. Has a semi-gloss, dries quickly. Is heavy bodied enough to permit of thinning with turpentine if a specially flat surface is desired. It is a paint which can be scrubbed, washed and patched. Is used on Cup Defenders and the highest classes of Yachting Crafts.

In cans of.	1 gal.	½ gal.	Quart
Price.....	\$3.75	\$1.90	\$1.00

## STANDARD YACHT WHITE

A scientifically prepared machine mixed paint composed of pure white lead and pure zinc white combined in such proportions as to insure the greatest durability. Absolutely free from make weight or adulteration. Specially adapted for yachts, vessels or outside work.

In cans of.	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

## MARINE WHITE

A good, honest, reliable snow white paint for outside purposes, not so expensive as yacht white. It will give good results.

In cans of.	1 gal.	½ gal.	Quart
Price.....	\$2.20	\$1.15	\$0.60

## INSIDE WHITE

A strictly pure paint for interior work, possessing good body and wearing qualities. It should never be used for outside work; will not crack, flake or change color.

In cans of.	1 gal.	½ gal.	Quart
Price.....	\$2.25	\$1.15	\$0.60

## INLAND LAKE YACHT WHITE FLAT

Is similar in every respect to our Inland Lake Yacht White, only this has a flat finish.

In cans of.	1 gal.	½ gal.	Quart
Price.....	\$3.75	\$1.90	\$1.00

## INLAND LAKE YACHT BLACK

Ready for Use

A full gloss black paint rich in lustre. It gives a fine and lasting finish. Will not turn gray. Will rub in 24 hours.

Will wear longer and retain its black longer than any black made.

In cans of.....	1 gal.	½ gal.	Quarts
Price.....	\$4.50	\$2.35	\$1.20

## STANDARD YACHT BLACK

Similar in quality and description with our Standard Yacht White.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.75	\$1.45	\$0.75

## MARINE BLACK

A pure semi-gloss black paint, in general demand by the larger steamships plying the Great Lakes.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.20	\$1.15	\$0.60

## COLUMBIA BLACK

Will be found an economical and convenient paint for painting large surfaces where expense must be considered.

In cans and bbl.	Bbls.	½ bbls.	5 gals.	1 gal.
Price...	\$0.85 gal.	\$0.90 gal.	\$0.95 gal.	\$1.00

## INLAND LAKE YACHT BLACK FLAT

Is similar in description to our Inland Lake Yacht Black with the exception of having a flat finish.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$4.50	\$2.35	\$1.20

## INLAND LAKE MARINE PAINT

PRICES IN BARREL LOTS ON REQUEST

In Buff, Venetian Red, Spruce, Dark and Light Lead, and Light and Dark Green

Are quite different from ordinary paints for the reason that the components are so selected and put together as to secure the maximum resistance to the usual wear and tear to which floors and decks are subject. An important property of these paints is that after they have become well set or nearly dry, water will harden them. They are equally good for vessels' decks or ordinary floors, whether applied over the usual canvas coating or to bare wood.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$1.65	\$0.85	\$0.45

French White Zinc. Green Seal. Paris Brand

French Zinc Whites are unequaled by any white paint now on the market.

Made by the French or Belgian process, they give the maximum of whiteness when ground in poppy-seed oil and thinned for use with clear spirits of turpentine. This paint, over a proper foundation, will give a fine, smooth, velvet-like finish that cannot be surpassed. Driers containing lead base should not be used, as they tend to discolor the zinc.

## INLAND LAKE MARINE PAINTS

ANTI-FOULING COMPOSITION, COPPER PAINT, BRONZES, POT LEAD, ETC.

### INLAND LAKE BRONZE Anti-Fouling Paint

The best copper bronze paint on the market. For bottoms of racing yachts and motor boats. The liquid and powder are in separate packages and mix easily in any quantity desired. Do not confound this with ordinary bronze liquid. It is entirely different, being a wood preservative as well as an insecticide for marine growths.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$7.00	\$3.50	\$1.85

### INLAND LAKE COMPOSITE

For bottoms of all steam and sailing vessels, either wood, iron or steel. Gives a fine sailing bottom and will keep in all climates. Absolute freedom from fouling.

Colors: Red, green, white and brown.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$3.00	\$1.65	\$0.85

### DEVOS'S METALLIC COPPER PAINT

Made in three shades—brown, red and green. An anti-fouling paint, for use on the bottoms of vessels. The vessel may be put in the water as soon as the paint has been applied.

In cans of...	1 gal.	½ gal.	Quart
Green.....	\$3.00	\$1.60	\$0.90
Red.....	2.50	1.35	.80
Brown.....	2.50	1.35	.80

### VERNOSITE BRONZE

Colors: Natural copper, sea green and vermillion. A pure copper bronze incorporated with "Vernosite" Spar varnish. It will protect bottoms from barnacles and sea growth, while the smoothness of the varnish makes it desirable for the bottoms of racing yachts.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$5.00	\$2.60	\$1.35

### KOPPER KOTE

Colors: Natural copper and bronze green. The pigment of this coating is pure copper mixed with a liquid specified by the government as the best under-water preservative. Will not turn color or foul under any conditions and is suitable for wood or steel bottoms.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$8.50	\$4.35	\$2.20

### INLAND LAKE POT LEAD COMPOSITION

Consists of just the proper amount of PURE GRAPHITE for a highly polished result and is combined with the best known wood preservative. Will materially reduce the "skin friction" of any craft and is more durable.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

### BOOT TOP PAINT

Colors: Red and Green

Made so it will stand the rapid changes from wet to dry better than any paint brought to our notice. Keep your water line discernible.

In cans of...	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

STAINS, FILLERS, SEAM PAINTS AND CANOE ENAMELS

### INLAND LAKE SEAM COMPOSITION AND SEAM PAINT

For deck and all other seams, or for any place where a perfectly tight joint is wanted. It does not become hard, swelling and shrinking with the wood and iron. One hundred pounds of seam composition will fill 3,000 feet of a seam 1 inch wide and ¼ inch deep, for which two gallons of Seam Paint are required.

Composition in 25 and 12½ lb. cans....per lb.	\$0.13
Composition in 5 and 2 lb. cans....	.16
Paint in ½ gallon cans.....each	\$1.20
Paint in ¼ gallon cans.....	.65
Paint in ⅛ gallon cans.....	.45
Paint in 1/16 gallon cans.....	.30

### LIQUID WOOD FILLER

In 1 gallon cans.....each	\$2.00
In ½ gallon cans.....	1.10
In ¼ gallon cans.....	.60

### OIL STAINS

Ash, Cherry, Dark and Light Oak, Mahogany, Rosewood and Walnut.

In 1 gallon cans.....each	\$1.80
In ½ gallon cans.....	.85
In quart cans.....	.50

### VARNISH STAINS

Colors, Cherry, Mahogany, Rosewood, Oak, Golden Oak, Walnut and Malachite Green.

Varnish stains are made for work that isn't important enough to employ a painter. Better give it a finishing coat of good varnish. If what you want to stain has never been painted, or has been painted a dark color, or has been varnished, give it a coat of light buff colored paint before staining. Use plenty of turpentine in making the buff color.

In cans of...	1 gal.	½ gal.	Quart	Pint
Price.....	\$1.85	\$0.95	\$0.50	\$0.35

### OIL STAINS

Colors: Cherry, Mahogany, Rosewood, Light Oak, Dark Oak, Walnut, Ebony, Green

Oil stains are made for painters, but anyone can use them. They must be covered with one or more coats of varnish. They work best on bare wood. If you want to stain something that has been painted or varnished before and can't get the old coat off, paint it with a coat of light buff before you stain it.

In cans of...	1 gal.	½ gal.	Quart	Pint
Price.....	\$1.60	\$0.85	\$0.45	\$0.25

### DEVONIAN SPIRIT STAIN

- No. 58. Malachite Green.
- No. 57. Dark Mahogany.
- No. 54. Golden Oak.
- No. 53. Weathered Oak.
- No. 52. Antwerp Oak.
- No. 51. Mission Oak.
- No. 50. Flemish Oak.

For finishing interior surfaces in natural wood colors with one application, producing a flat or dead finish.

The Mission or Antique effect frequently desired is obtained by the use of these stains at a trifling cost for material and labor.

Surfaces treated with these stains may be further finished with Hard Wax Polish if a semi-gloss, satin-like surface is wanted.

In cans of...	1 gal.	½ gal.	Quart	Pint
Price.....	\$2.50	\$1.35	\$0.70	\$0.40

### CANOE ENAMELS

Colors: Indian Red, Vermilion, Moss Green, Tuscan Red, Orange, Emerald Green, Dark Gray and Yale Blue

Our Canoe Enamel will dry quickly with a high gloss of weather-resisting qualities; unaffected by sun or water.

In cans of...	1 gal.	½ gal.	Quart	Pint
Price.....	\$4.75	\$2.40	\$1.25	\$0.65

## VARNISHES AND ENAMELS

## INLAND LAKE FLOOR VARNISH

For finishing and preserving floors. Will not scratch or turn white.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

## INLAND LAKE INTERIOR FINISH

A high grade interior varnish. Is not affected by gases, steam or water; dries dust free in six to eight hours and may be rubbed to a dull finish in 48 hours and polished in four to five days.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

## INLAND LAKE No. 1 COACH VARNISH

Our own brand; a durable and elastic varnish for inside or outside work.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.00	\$1.10	\$0.60

## INLAND LAKE DAMAR VARNISH

Made from the best selected Damar gums. Not adapted for use on furniture or outside work.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

## INLAND LAKE EXTRA HARD OIL FINISH

Specially adapted for fine interior work; dries in twelve hours with fine lustre.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$2.50	\$1.35	\$0.70

## INLAND LAKE SPAR VARNISH

A varnish specially manufactured for us, guaranteed in every respect. It will not turn white, crack or blister.

In cans of.....	1 gal.	½ gal.	Quart	Pint
Price.....	\$3.00	\$1.65	\$0.85	\$0.50

## INLAND LAKE MOTOR BOAT FINISH

A high grade varnish. Quick drying, of great durability; will not turn white. Useful in emergencies for touching up, chafing, etc.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$4.00	\$2.10	\$1.10

## CROCKETT'S SPAR COMPOSITION

Crockett's Spar Composition is composed of the best material purchasable. It is the most durable, the best known and has the largest sale of any marine varnish manufactured. Positively salt and fresh waterproof, it is invaluable for exterior marine work of every kind and as its name indicates, particularly adapted for spars of steamships, yachts and canoes.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$4.75	\$2.45	\$1.25

## SPAR COATING

A perfect finish for all exterior wood and iron work on vessels and other structures exposed to frequent changes in weather and temperature. Good body, light in color and free working.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$5.00	\$2.60	\$1.35

## No. 1 CROCKETT'S PRESERVATIVE

The best interior varnish for its purpose and price that brains and experience can produce. Less liable to scratch than any finish known. Is not affected by contact with chemical gases, steam, or washing with hot or cold water and soap; can be rubbed and polished or left with an eggshell gloss.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$3.25	\$1.80	\$0.95

## NAVALITE

A marine varnish of Chicago production. It is very pale and elastic, does not spot or crack, dries safe from dust in ten hours and gives a very smooth finish.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$4.75	\$2.45	\$1.25

## DURABLE SPAR

For severe exposure and moisture. Dries free from dust in 8 to 10 hours and hard in 36 to 48 hours.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$3.25	\$1.75	\$0.90

## INLAND LAKE CANOE VARNISH

In cans of.....	Quart	Pint
Price.....	\$1.00	\$0.50

## G. B. C. &amp; CO.'S SPECIAL MARINE VARNISH

An inexpensive varnish for extensive work where price has to be considered. The choice of large manufacturers who thoroughly tested it as to color, drying qualities, body and durability. In 5 gal. cans only.....per gal. \$2.00

## MIXING VARNISH

In bulk for mixing with paint to give glossy effect. In any quantity.....per gal. \$1.00

## ENAMELS

## EMIL CALMAN &amp; SON'S MARINE WHITE

## ENAMEL

Ready for use and much easier to apply than most white or zinc paints. Will not discolor. It is the handsomest and most durable enamel for hulls and cabins.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$7.00	\$3.60	\$1.85

## HARLAND &amp; SON'S ENGLISH MADE ENAMELS

Made in England for the special use of people wanting something that is serviceable, durable and which will not discolor. It has become very popular since its introduction, several years ago.

In cans of.....	1 gal.	½ gal.	Quart
Price.....	\$8.00	\$4.10	\$2.25

## SOAPS

Fig. 001

Fig. 002

Fig. 003

Fig. 004

### Fig. 001 AMERICAN FAMILY SOAP

American Family Soap is a firm hard soap which will not waste away in the water like soap made from soft greases or cheaper grades of stock. It may be used equally well in hot or cold water; always lathers freely and is a much larger cake than the ordinary yellow laundry soap on the market. Packed in cases of 66 bars.

Price per case.....\$2.50

### Fig. 002 DUSKY DIAMOND TAR SOAP

French hard milled; contains Georgia pine tar and cocoanut oil. Lathers freely. Extra large cakes each in carton and packed 50 and 100 cakes in case.

Price per box of 50 cakes.....\$2.50

Price per case of 100 cakes.....4.90

### Fig. 003 HAND PUMICE

Kirk's Hard Water Pumice is an ideal mechanics' soap. It is sufficiently hard so it will not wash away. Each cake packed in a carton, 12 cartons to a paper box, and 50 or 100 cartons to a wooden box.

Price per box of 50 cartons.....2.50

Price per box of 100 cartons.....4.90

### Fig. 004 ARMOUR'S LIGHTHOUSE SOAP

A very good soap, used with equal success in hot or cold water. A firm, hard soap which lathers freely. Packed 66 bars to the case.

Price per case.....\$2.85

### ARMOUR'S WHITE FLOATING SOAP

Fig. 005

A hard milled, white floating soap, suitable for the bath or laundry. Very economical to use. Packed 100 bars to the case.

Price per case.....\$8.50

### THE SOAP IN THE TUBE

Fig. 006

A self-lathering, condensed, grease removing soap. Does twice the work in half the time. With a little warm water it will lift all grease, paint stains. No grit.

Price per tube.....\$0.10

Price per pint can......35

### AMERICAN CROWN SOAP

Made of pure vegetable oils and free from all injurious chemicals. Will not injure the highly finished parts of automobiles and other vehicles.

The use of American Crown Soap on harness, cushions, buggy tops, etc., makes the leather look like new. It does not injure the hands like ordinary harness soap.

American Crown Soap will "knock grease off the hubs" of your automobile or carriage. Use a little on a sponge. For caked grease use a brush.

American Crown Soap will remove all "stable stains." Wash with warm suds and rinse.

American Crown Soap will benefit a cracked hoof when washed with suds and rubbed in thoroughly.

Packed in 12½, 25 and 50 pound pails.

Price per 12½ pound pail.....\$2.00

Price per 25 pound pail.....3.90

Price per 50 pound pail.....7.75

## CYLINDER AND ENGINE OILS OILS AND GREASES

Our position as one of the largest distributors of oils and greases in the middle west has enabled us to perfect a line which is second to none and is identified by the Inland Lake label, with which each package is marked.

Inland Lake oils and greases are now being used throughout the United States and Canada, as well as a number of foreign countries, and are running true to form in giving added life to engines and machinery operating under practically all conditions and in all climates.

Give Inland Lake lubricants a trial. They will save you money and preserve your equipment. Engineers seldom go back to the other brand after using Inland Lake.

Owing to daily fluctuations in the market, we are unable to insert prices in this catalog. We are usually able to quote a little lower than the prevailing market prices on account of the immense quantities we purchase, and large stocks on hand. For this reason we are invariably in position to make shipment the same day your order is received, for any amount from a gallon to a hundred barrels.

### WE MAKE THE USUAL CHARGES AND REBATES FOR OIL PACKAGES, AS FOLLOWS:

Wood Barrels, about 52 gallons.....	Free	1 gallon cans.....	\$0.25
Wood Half Barrels, about 30 gallons.....	\$0.50	Steel Drums, 55 gallons.....	5.00
10 gallon cans.....	1.00	30 gallon steel drums.....	3.00
5 gallon cans.....	.50	15 gallon steel drums.....	1.75

The Steel Drums are all fitted with detachable faucets and all packages are credited at full purchase price if returned (freight prepaid) in good condition within a reasonable time.

### INLAND LAKE STEAM CYLINDER OIL

Made from the highest grade filtered stock and compounded in a scientific manner. Particularly well liked by engineers who want the best and insist upon getting it.

Price per gallon..... \$ —

### INLAND LAKE COLUMBIA STEAM CYLINDER OIL

Made especially to meet the demand for a medium priced oil, and worth more than the price we ask for it.

Price per gallon..... \$ —

### INLAND LAKE FARM MACHINERY CYLINDER OIL

Low priced, but by no means low grade. A first class oil, adapted to farm machinery use.

Price per gallon..... \$ —

### INLAND LAKE STANDARD GAS ENGINE OIL

Made especially for gasoline engine use. Feeds freely, won't gum, carbonize or dirty the plugs.

Price per gallon..... \$ —

### INLAND LAKE MARINE OIL

The best oil to use on all types of marine motors. Very well spoken of by both sporting and commercial boatmen.

Price per gallon..... \$ —

### INLAND LAKE ENGINE OIL

A free flowing oil for general engine and shafting use. Uniform in quality and reliable under the most severe conditions.

Price per gallon..... \$ —

### INLAND LAKE COLUMBIAN ENGINE OIL

A high grade engine oil, which while not as expensive as the one above, will give better service than many other medium priced oils.

Price per gallon..... \$ —

## ADVERTISED LUBRICANTS

Many users of oils and greases have a preference for some of the brands being extensively advertised in trade journals, and in order that none of our customers need be disappointed, we shall be glad to furnish promptly any grade they may have use for. Among those which we are in position to ship immediately are:

Mobil oils. Texas. Polarine. Sullivan oils. Havoline. Monogram. Neatsfoot.

The above are all furnished at prevailing market prices.

## MISCELLANEOUS LUBRICANTS

### INLAND LAKE CUP GREASE

We believe that in our Inland Lake cup grease we approach closer to having the perfect article than any other dealer. This grease is a solidified oil compound for engine bearings, and all other places where it is possible to substitute grease for oil. It will withstand high heat and lowest cold temperatures and retains the same body always.

It will not gum, corrode nor deposit sediment, and possesses remarkable friction reducing qualities. We can furnish it in following grades:

No. 2 Medium Soft. No. 3 Hard. No. 4 Extremely Hard.

Furnished in barrels of 425 lbs., half barrels of 275 lbs., and in 25, 10 and 5 lb. cans.

Price per lb. depends on quantity ordered.

### INLAND LAKE TRANSMISSION GREASE

This is not a graphited grease, and is of a quality that will add considerable life to transmissions and differentials. We sell as much of this grease as we do of any of the advertised brands shown in this book and know it is giving satisfaction. Packed in 25, 10 and 5 lb. cans.

Price per lb. depends upon quantity ordered.

### INLAND LAKE AXLE GREASE

A high grade axle grease, for use on farm machinery and wagons for city service. The ingredients in this axle grease are of a far better grade than those usually found in greases selling for more than we ask for ours. Packed in barrels, half barrels, 100 lb. kegs and 25, 15 and 12½ lb. cans.

Price per lb. depends upon quantity ordered.

### INLAND LAKE SLUSHING COMPOUND

Used in shipyards for greasing the ways, and in unloading iron rails and heavy pieces from ships. Packed in barrels, half barrels and 50 and 25 lb. cans.

Price depends upon quantity ordered.

### INLAND LAKE GRAPHITE GREASE

The perfect lubricant for universal use. Can be used with very good results for farm, mechanical and industrial purposes. Packed in barrels, half barrels, 100 lb. kegs and 50 and 25 lb. cans.

Price per lb. depends upon quantity ordered.

### INLAND LAKE GENERAL PURPOSE LUBRICATING OIL

Adapted for bearings, journals and all moving parts of machinery, and will serve very well where special oils for special purposes are not necessary. Price per gallon..... \$ —

### INLAND LAKE CASTOR MACHINERY OIL

Used by the speed kings in all the important automobile races, and by racing hydroplanes. A high grade lubricant that is rapidly making its way to the front on account of efficient service. Price per gallon..... \$ —

### INLAND LAKE ICE MACHINE OIL

Specially compounded. A clear colorless oil compounded especially for ice machine use. Will not congeal or become thick under lowest temperatures. Price per gallon..... \$ —

### INLAND LAKE DYNAMO OIL

The high speeds of dynamos and motors have no effect on this oil, and we particularly recommend it to any one desiring an oil for high speed use. Price per gallon..... \$ —

### INLAND LAKE COMPRESSOR OIL

An air compressor oil must be of even consistency under all temperatures to properly serve the purposes for which it is intended. Inland Lake compressor oil is one of the best we have seen for such service. Price per gallon..... \$ —

### INLAND LAKE SPERM OIL

Meets the requirements of the United States government, Navy department, for lifeboat use. Price per gallon..... \$ —

### INLAND LAKE SIGNAL OIL

Used extensively for marine and railroad signal service, and is compounded to give the best service under all conditions. Price per gallon..... \$ —

### INLAND LAKE BLOCK OIL

The best block signal oil. Used by all railroads. This oil must be a quality article in every way in order to do its duty efficiently. Price per gallon..... \$ —

### INLAND LAKE WINTER STRAINED LARD OIL

Manufactured by Armour & Co., and is made especially for winter use, when an oil that will not congeal, is in demand. Price per gallon..... \$ —

### INLAND LAKE No. 1 LARD OIL

While not as pure as our Winter Strained Lard Oil, our No. 1 will serve very well for thread cutting and in other places where price is an object. Price per gallon..... \$ —

### INLAND LAKE THREAD CUTTING COMPOUND

A heavy oil used principally for thread cutting and die work; we have sold a very large amount of this oil; it is the best for the purpose. Price per gallon..... \$ —

## OILDAG—GREDAG

Fig. 406A

**Oildag** is Defeculated Graphite diffused in oil. By some it is called Liquid Graphite, the graphite being so fine that it flows wherever oil will flow. It is sold in concentrated form in cans which contain sufficient to charge 1, 5, 10 or 50 gallons of oil. You mix it with the oil you use regularly. It is an ideal lubricant for motor boat engines, steam engines, bearings, and for general use.

Defeculated Graphite, as it is presented in Oildag, will not clog filters or mechanical oilers or prove anything but extremely helpful in assisting to perfect lubrication.

## PACKAGES AND PRICES

No. 1 Can, containing charge for 1 gallon oil; one dozen in a box; sold only by the box.....	\$ 2.50
No. 5 Can, containing charge for 5 gallons oil.....	1.00
No. 10 Can, containing charge for 10 gallons oil.....	2.00
No. 50 Can, containing charge for 50 gallons oil.....	10.00

**Gredag** differs from all other greases in that it contains pure, gritless Acheson-Graphite. Quickly and thoroughly forms the graphite film necessary to perfect lubrication and the proper protection of gears. This film will not break under pressure when full power is suddenly thrown upon the gears, but it assists the teeth to silently engage in mesh and makes the car run quietly and sweetly. For universal couplings, clutch thrust bearings, wheel hubs, cup use, etc., Gredag is unequaled.

Fig. 406B

## GRADES OF GREDAG

Gredag is made in several grades and consistencies to meet all requirements, the grades for automobile use being as follows:

No. 31, Semi-Fluid; No. 32, Soft; No. 33, Medium; No. 63, Medium, of a spongy nature.

## SMOOTH-ON COMPOUND

**Smooth-On Compounds** are chemically prepared iron compounds made and sold in a powder form and used by mixing with water to the consistency of stiff putty. When in this state they must be applied immediately, because the metallizing action of these cements is rapid, acting without heat, and in a few minutes will get too stiff to work. In a few hours they metallize as hard as iron.

These cements are made for a number of different purposes as follows:

**No. 1 and No. 2** (blue labeled cans). For repairing leaks or breaks in castings and for making connections in steam or hydraulic work. **No. 1** is quick hardening, **No. 2** slow hardening, and hydraulic. Applied as a paste or putty.

**No. 3 Elastic Cement** (gray labeled cans). Paste form, for use on all seams of boilers or tanks to stop leaks, also for boiler patching and for screw thread joints. Applied as a paint, paste or putty to hot or cold metal.

**No. 4 Castings** (yellow labeled cans). An iron cement in powder form for repairing blemishes, blow-holes, or defects in iron or steel castings. Made in two grades—A, for fine castings; B, for coarse castings. Applied as a putty.

**No. 5 Calking Cement** (red labeled cans). For plumbers, in powder form in two strengths—Regular and Special—Regular for soil pipe and greenhouse work, Special for water and gas main joints for high pressure.

## No. 6 RIVET CEMENT—WHITE LABELED CANS

A metallic putty cement for use on ships' sides, iron, steel or wood construction work, metal skylights, vault lights, etc. Prepared in putty form, ready for use, in air-tight cans. Applied with a trowel or putty knife and is very easy to work.

## LIST PRICES "SMOOTH-ON"

Iron Cement Nos. 1 and 2 in 1, 5, 10 and 25-lb. tins.....	per lb. \$0.50

Rivet Iron Cement No. 6 in 1, 5 and 10-lb. cans.....	" .50

## DIXON'S SILICA-GRAPHITE PAINT

Economical for Priming and Finishing Boats and Iron and Steel Construction

Dixon's Silica-Graphite paint has been on the market for nearly fifty years and is generally looked upon as the standard priming and finishing agent for iron, steel and other metal surfaces. The pigment is a natural combination of Silica and Flake Graphite. Nothing but the best linseed oil is used as a vehicle. The pigment, being inert, no chemical action is possible, either between it and the oil, or as a result of outside attack from acids or alkalis.

Flake graphite being a lubricant, properly insures thorough application as well as a saving in labor and brushes. The average spreading rate is 500 square feet per gallon on metal surfaces.

Dixon's Silica-Graphite Paint is non-explosive and non-poisonous to handle.

Made in four colors and only one quality—the best. The colors are: Natural, black, olive green and dark red. The black is especially prepared for steel smoke stacks, boiler fronts, ornaments, iron work and surfaces subjected to sulphurous fumes.

## SPECIFICATIONS FOR STEEL AND IRON CONSTRUCTION WORK

**At the Mill**—Before painting, all surfaces must be thoroughly cleaned, freed from loose scale, dirt and moisture. The entire surface shall then be given a well-applied coating of Dixon's Silica Graphite Paint, dark red. Parts to be in contact and closed, shall receive before assembling a coat of the same material.

**After Erection**—Places damaged by abrasion shall first be retouched. The entire work shall then be given a second coat of Dixon's Silica-Graphite Paint, of a different color than the mill coat.

The top of the package to be removed, and the paint properly stirred. No adulterating oils or thinners shall be used. The cleaning, painting and materials to be subject to inspection.

The paint to be furnished to the mill and building site, in original packages, READY MIXED for use.

## SPECIFICATIONS FOR STEEL AND IRON MAINTENANCE WORK

**Cleaning**—All broken or blistered paint, all rust, grease and dirt, must be removed by wire brushes, scrapers, blow torch, or by sand blasting with fine sand. The method to be selected and made part of the contract. Surfaces must be painted the day they are cleaned.

**Repainting**—All surfaces shall be given two thorough coats of Dixon's Silica-Graphite Paint. The second coat to be applied only when the first is thoroughly dry, and to be of a different color. Surfaces must be perfectly dry when painted. The best round bristle brushes to be used.

The top of the package to be removed, and the paint properly stirred. No adulterating oils or thinners shall be used. The cleaning, painting and materials to be subject to inspection. Paint to be furnished in original packages, READY MIXED for use.

## THINNED, READY MIXED

1 gallon in pail .....	per gal. \$2.25	25 gallons in ½ barrel .....	per gal. \$1.70
5 gallons in keg .....	per gal. 2.15	Barrel (about 50 gallons) .....	per gal. 1.65
10 gallons in keg .....	per gal. 1.75		

DIXON'S PAINT IS SOLD ONLY READY MIXED, NOT IN PASTE FORM

The smoothness and softness possessed by graphite in a more remarkable degree than by any solid substance, early suggested its use as a lubricant.

Since its introduction, the field of its employment has gradually widened to include its regular use with oils or greases, with water, and in some cases unmixed with other materials.

Dixon's Graphite has now an established place in the ordinary and usual routine of the engineer's work. It is successfully used in the lubrication of great motors, compound engines, locomotives, heavy shaft lines, and gears. It is of special value for lubricating cylinders and valves where lubrication is difficult, owing to high pressure and the use of superheated steam. It saves wear and tear in mill-steps, turbine steps, gears, heavy bearings, and in all cases where friction is severe.

Scientific theory and practical experience clearly indicates the superiority, for all purposes of lubrication, of the flake graphite rather than the amorphous or non-crystalline graphite.

Dixon's Lubricating Graphite is all of one quality, but is ground into several degrees of fineness, or, rather, sizes of flake.

No. 1 is the largest flake, and is best adapted for heavy or loose bearings, cylinders of blowing engines, etc.

No. 2 is more finely pulverized. The experience of practical engineers seems to demonstrate beyond any question that for cylinder lubrication it is the best size.

No. 635 is specially prepared graphite which is ground to a flour-like degree of pulverization; being ground to such a degree, of fineness, it mixes readily and stands up well in even light oils. It will not gum or stick, and is the very best graphite for valves, all parts of air-brakes and gas engine cylinders.

## DIXON'S GRAPHITE LUBRICANTS

The Only Perfect Lubricator

## DIXON'S BOILER GRAPHITE

Dixon's Boiler Graphite No. 2 is prepared from finely ground flake graphite. Used according to instructions it is the most simple and effective scale remover known. It does not act chemically, cause foaming, affect the quality of steam or injure metal. Write for descriptive booklet.

50-lb. box .....	per lb., \$0.17
100-lb. keg .....	..16
Half barrel .....	..15
Barrel of about 400 lbs.....	..14

## DIXON'S GRAPHITE GREASE, No. 8815

This grease possesses an unusual degree of resistance to heat, although at normal temperatures, it feeds nicely through compression cups.

It is particularly valuable for lubricating engine valve gears and bearings subjected to external heat, and has also shown excellent service on flour mill, paper mill, and rolling mill machinery.

10 lbs. ..each,	\$1.50	100 lbs. ..each,	\$12.00
25 lbs. ..	3.50	400 lbs. .per lb.,	.10
50 lbs. ..	6.50		

## DIXON'S GRAPHITE PIPE JOINT COMPOUND

Dixon's Graphite Pipe Joint Compound is not a cement which hardens, but rather a true lubricant for the thread of pipes, bolts, nuts, turn-buckles, etc., making them easy to screw up and allowing them to be taken apart without damage or trouble. Also valuable on flanges, gaskets, boiler tube caps, gas retort doors, etc.

Joints made up with this material can never rust, corrode, or stick, but may always be separated without difficulty after any length of time. Dixon's Graphite Pipe Joint Compound is very much superior to red or white lead and is 3 1/2 times as bulky.

## DIXON'S GRAPHITE LUBRICANTS

## DIXON'S TICONDEROGA FLAKE GRAPHITE

Dixon's Flake Graphite has many valuable applications as a lubricant for cylinders, valves and bearings, either alone or mixed with oils and greases. It is also nearly indispensable to engineers and mechanics for coating gaskets and packing, for pipe-fittings, etc.

Dixon's Ticonderoga Flake Graphite is prepared in the coarser (or No. 1) flake, and the finer (or No. 2) size. Users of Dixon's Graphite will do well to keep both kinds on hand, as each has special advantages. If the finely ground (No. 2) Graphite is desired, so specify it in the order. Prices the same for Nos. 1 and 2.

Trade Nos.		Per Case	Per Pkg.
632.	1-lb. paper can. (36 in case).....	\$12.00	\$0.40

## DIXON'S SOLID BELT DRESSING

Put up in bars weighing about one lb. of convenient shape and size. Applied to belts while in motion, stops all slipping instantly.

Increases efficiency of belts that are too narrow for the load.

Superior to resin, tar and vegetable or animal oils. Equally satisfactory for leather, rubber, canvas or fabric belting.

1-lb. bars in case.....	each, \$0.35
Case of 25 bars .....	7.50

## DIXON'S WATERPROOF GRAPHITE GREASE

In all respects a high-grade lubricant for loose open bearings, gears, slides, etc. It possesses great adhesiveness and tenacity, and will not be thrown from gears, chains, wire ropes, sprocket chains and the like, traveling at a high speed.

Dixon's Waterproof Graphite Grease contains no soluble ingredients and cannot be washed off by fresh or salt water, by acid or alkaline water.

These properties highly commend its use upon wire ropes and chains, gears, cranes, derricks, dredges, steam shovels, pile drivers, winches, hoisting engines, quarrying and mining machinery, elevator plungers, fire hydrants, and every sort of machinery exposed to water or the weather.

5-lb. tin can (10 in case).....	per lb., \$0.18

## DIXON'S GRAPHITE No. 635

This is a special grade of Dixon's Pure Flake Graphite, selected with great care and ground to an impalpable degree of fineness. No. 635 is largely used upon locomotive mechanisms, type-setting machinery, light, close-fitting bearings, spindles, bobbins and other delicate parts of textile machinery, stationary gas engines, cyclometers, scientific instruments, firearms, talking machines, etc.

For certain purposes it is thoroughly ground with just enough sperm oil to make it more adhesive. If this style is wanted simply specify No. 635 "oiled" in the order.

## DIXON'S GRAPHITE AUTOMOBILE LUBRICANTS

## GRAPHITE TRANSMISSION AND DIFFERENTIAL GREASE No. 677

A graphited grease of just the right consistency for all transmission and differential gears, except those intended to be lubricated with light oil. It is the grease the "Speed Kings" use. There is nothing like it on the market. We stand behind this grease with our strongest recommendation.

1-lb. tin cans (36 in case).....	per lb., \$0.35
5-lb. tin pails (10 in case).....	..... " .30
10-lb. tin pails (6 in case).....	..... " .25

Larger Sizes if Desired.

## GRAPHITE GEAR OIL No. 675

A very light bodied gear lubricant for use in transmission and differential cases designed for light oil lubrication. Generally speaking, No. 675 should be used only in cases fitted with plain bearings.

5-lb. tin pails (10 in case).....	per lb., \$0.30
10-lb. tin pails (6 in case).....	..... " .25

## GRAPHITE NON-LEAK GREASE

No. 680

Many differentials permit the lubricant to work out on the brakes and wheels. No. 680 will cure this trouble for it does not work out of the housing. Try it if your rear axle leaks. This special grease should be used only when No. 677 or No. 675 will not stay in the differential; it is not intended for transmissions.

5-lb. tin pails (10 in case).....	per lb., \$0.30
10-lb. tin pails (6 in case).....	..... " .25

Larger Sizes if Desired.

## GRAPHITOLEO

Pack wheel spindles and steering gear housings with Graphitoleo. Absolutely warranted not to gum or become rancid. The collapsible tubes are very convenient for automobile use.

8-oz. tubes (36 in case).....	per doz., \$5.00
1-lb. tin cans (36 in case).....	per lb., .55
5-lb. tin pails (10 in case).....	..... " .50

## GRAPHITE CUP GREASES

Cup greases containing fine flake graphite, reduce friction to a minimum. Use Dixon's No. 3, except in hot climates where No. 5 is better. For all grease cups, wheel spindles, etc. By using these high grade graphite greases the bearings soon acquire the well-known graphite polish that eliminates friction and causes easy running.

1-lb. tin cans (36 in case).....	per lb., \$0.35
5-lb. tin pails (10 in case).....	..... " .30
10-lb. tin pails (6 in case).....	..... " .25

Larger Sizes if Desired.

## GRAPHITE HEAT-RESISTING GREASE No. 676

No. 676 is the best grease we know of for universal joints, water pump cups, overhead valve cups and clutch thrust collars. It positively will not melt and run out. This grease should not be used on gears.

1-lb. tin cans (36 in case).....	per lb., \$0.35
5-lb. tin pails (10 in case).....	..... " .30

## MOTOR GRAPHITE

The purest and most carefully selected grade of flake graphite, ground to impalpable fineness. May be mixed with oil or grease as required. Its function is to eliminate friction and wear of parts and to increase power. Use it in cylinders, on chains, springs, tires, wheel rims, bearings and wherever friction occurs.

½-lb. tin cans (36 in case).....	per can, \$0.50
8-lb. tin cans (1 in case).....	..... " 4.00

## GRAPHITE MOTOR CHAIN COMPOUND

Without an equal for lubricating automobile driving chains. When chain is cleaned and immersed in the melted compound, no other external or internal applications are necessary. The compound may be used repeatedly. Prevents rust and wear. Put up in cakes of about 3 lbs. each.

20 cakes per case.....	per cake, \$1.00
------------------------	------------------

# Cordage and Twines

---

**F**OR seventy-seven years rope and twine have been big staples in our business. We have specialized on these goods, as have few other merchants in this country. We have studied the industry long and carefully. We have backed our judgment and we have been successful, and the one big reason for our success is the simple fact that *we know the right rope or twine for your particular use*, and what is more, we carry it in stock.

There are many factors in this seemingly simple question, but they all boil down to *strength, usability, durability and price*, and the proper balance of these four factors applied to the varied needs of our customers is what our experts are working on all the time.

It is right here that the *big value of our service* comes in by offering you the best rope or twine for your purpose. All you have to do is to tell us the use to which the material is to be put, and we can supply you the right cordage at the right price.

*No concern in the United States carries a more diverse and comprehensive stock of cordage and twines than we do. No concern carries a larger stock or does a larger business, or tries harder to give its customers intelligent service, fair prices and a square deal.*

We therefore urge you to put your cordage problems up to us and let us help you determine what material, grade and quality best fills your particular needs.

GEO. B. CARPENTER & CO.

An eighteen inch circumference "Old Colony" switch-rope—made by our own riggers—  
breaking strain, 200,000 pounds.

# Old Colony TRANSMISSION ROPE

STANDS FOR

**Durability  
Service**

**Economy  
Safety**

**I**N the selection of a rope for the transmission of power, Quality and Reputation are the main points which should receive attention.

The question of price is relatively unimportant as a saving in first cost often turns into an added expense and risk in the long run. Don't experiment, but buy a rope with a record.

In the manufacture of Old Colony Transmission Rope the question of price is not considered, our purpose at all times being to better its quality rather than decrease its cost, and after a continuous and successful history of nearly thirty years—during which time we have supplied Old Colony to a constantly increasing list of important power plants—we offer Old Colony to you as the best rope money can buy.

We carry Old Colony Transmission Rope in Chicago stock in 3 and 4 strand,  $\frac{3}{8}$  to  $1\frac{5}{8}$  inches diameter in 3000 foot coils, and  $1\frac{3}{4}$  to  $2\frac{1}{4}$  inches diameter in 2000 foot coils. Cut lengths also.

## SPLICING

To insure perfect service your ropes must be perfectly spliced. We send men to any part of the country to do this work when necessary.

## PRICE

Old Colony Transmission Rope is sold by the pound and fluctuates with the price of the best marks of Manila Hemp. Estimates and quotations furnished on request.

Old Colony Rope can be identified by a green marker yarn which appears on the surface.

Bale of Manila Hemp

Trade Mark

TABLE OF WEIGHTS AND PULLEY DIAMETERS TO BE USED  
IN CONNECTION WITH OLD COLONY ROPE

Size of Rope, inches	Approx. Wt. of 4-Strand per 100 Feet, lbs.	Proper Diameter Pulley inches
$\frac{3}{8}$ .....	5	18
$\frac{1}{2}$ .....	$9\frac{1}{2}$	22
$\frac{5}{8}$ .....	16	24
$\frac{3}{4}$ .....	20	30
$\frac{7}{8}$ .....	30	36
1 .....	35	42
$1\frac{1}{8}$ .....	42	48
$1\frac{1}{4}$ .....	50	54
$1\frac{3}{8}$ .....	65	57
$1\frac{1}{2}$ .....	75	60
$1\frac{3}{4}$ .....	110	72
2 .....	130	84

Above weight is for Four-Strand Rope. Three-Strand Rope will weigh approximately 5% less.

#### TABLE HORSE-POWER TRANSMITTED BY ROPE

In determining the Horse-Power which a rope will transmit, the problem embraces coefficient of friction, difference in tension, influence of centrifugal force, and many questions of weight, strength and velocity.

In the following table, taken from Flather's treatise on "Rope Driving," the stress on the rope is the same at all speeds (200 lbs. working strain), due allowance having been made for all of the above factors.

Velocity of Rope in Feet per Minute	Diameter of Rope, inches						
	$\frac{5}{8}$	$\frac{3}{4}$	1	$1\frac{1}{4}$	$1\frac{1}{2}$	$1\frac{3}{4}$	2

#### SCIENTIFIC INFORMATION

Any of our customers who wish to consult the best authority on the many scientific and mechanical problems which Rope Driving presents, should obtain the splendid treatise entitled "Rope Driving," by Prof. John J. Flather, Ph. B., M. M. E. This treatise can be had for \$2.00, or in case you do not care to purchase, we shall be pleased to loan you a copy for consultation, to be returned at your convenience.

Hank of Manila Hemp

# Old Colony

## CAISSON ROPE

A PERFECT hawser laid rope made especially for this purpose from selected long fibre Manila hemp.

Because of the element of danger to life in all Caisson work, no superintendent should knowingly use any but the very best rope on the job.

“Old Colony” Caisson Rope has exceeded all claims made for it. Hard competitive tests have proven that there is no better rope for this purpose, that there is no rope more safe, or more economical in the long run.

Contractors who **know** will use no other.

Size generally used is 1 1-8 inch diameter. We have it in 1200 foot coils, weighing approximately 525 lbs.

Per Pound.....Cts.

Any size and length cut to order at a slight advance over coil price to cover wastage.

# Old Colony

## HOISTING ROPE

### RESPONSIBILITY

Where life and property are at stake, it is the surest economy to use only the best and highest grade rope obtainable. There is a constantly growing demand for Manila cordage of better-than-usual quality for switching, hoisting and towing purposes, and in "Old Colony" Hoisting Rope we offer a product that will meet all requirements.

It is made of specially selected long fibre Manila Hemp, and manufactured under the closest supervision of experienced ropemakers. It is the constant aim to produce a rope for heavy duty that will insure the safety of the people handling it, as well as the apparatus of which it will later become an important working part.

We recommend "Old Colony" Hoisting Rope as the best rope the market affords. Carried in Chicago stock in 3 and 4 strand,  $\frac{3}{8}$  to 4 inches in diameter, in 1,200 foot coils.

Approximate Table of Weights

3 Strand

COTTON  
LINES

MANILA  
SISAL  
AND  
JUTE  
LINES

All our Lines are packed in dozen. The dozens are neatly wrapped in paper, and a label showing brand and lengths is placed on each.

Are packed one gross in a bale. The labels are plain but substantial, and give only necessary information as to the Lines contained in package. When a Special Label of any description is required we furnish same free of charge, provided the order is sufficiently large to warrant the additional expense and care.

The higher class of Lines, including all Braided Lines, have a label on each hank. We guarantee our Lines as full length in every case.

We make all Lines with two hanks connected, so that they can be retailed in pairs or single, as occasion demands. Prosecution will follow the use by others of our brands or labels.

Basis, 100 feet.

All Lengths 50 to 100 ft. in proportion.

All Lengths under 50 ft. additional 5%.

# The Rubber Department

---

**I**N presenting to you this part of our catalog, we feel we cannot emphasize too strongly the unique position which we occupy in the Mechanical Rubber Goods field. We have handled this line of goods for over thirty years as special agents and distributors for some of the largest manufacturers in the United States. Our activities have brought us in touch not only with the users of the goods and their special requirements, but also with the actual manufacture of all the different items in this important line. We have accumulated an intimate knowledge, therefore, of both ends of the game. *THIS KNOWLEDGE IS AT YOUR SERVICE.* Furthermore, we have a great additional advantage in *not being tied to any one line of goods.*

It is a self-evident proposition that all manufacturers have their particular specialty. Out of *one factory* will come the *best belt*; out of *another factory* will come the *best hose*; from still *another* the *best packings*. Our independent position coupled with our *big outlet* and *enormous distributing power* enables us to select the best items from each manufacturer's line. This policy has resulted in an "*All Star Line.*"

The greater part of these goods is made up in accordance with special formulae, particularly adapted to the needs of our trade, and are offered under *our own brands* and under *OUR own GUARANTEE.*

## RUBBER BELTING

## "Old Colony"

## RUBBER BELT

"The Last Word In Belt Construction"

## CONSTRUCTION

It consists of a special high grade tight woven duck, thoroughly stretched. Tough and elastic new rubber friction between every ply with an added feature of a heavy cushion between the first and second layers of duck around the entire belt, which is made to give it more life on small fast running pulleys, also allowing the outside ply to stretch more than the inner, preventing the belt from coming apart. The plies are literally welded together by pure gum, which is forced under pressure into every fibre of the duck. A tremendously strong belt is the result. It is pliable, fit for the heaviest duties in power transmission without stretch or ply separation.

## USES

It is recommended for stone crushers, saw, paper, stamp, cement mills, bleacheries, brick and silica plants, sand and gravel pits or any other place where a good substantial quality belt like Old Colony is required.

We base our recommendations on experience and practice and we solicit your inquiries.

A trial order will be appreciated.

## INDIAN HEAD

Our Indian Head is particularly designed as a reliable transmission belt for general use. We recommend it for satisfactory service under all but extreme conditions. The duck is heavy and strong, and the rubber is of very good quality. In its construction caution is taken to insure straight running, flexibility, uniform thickness.

Quality considered and from a standpoint of service value, Indian Head is an attractive purchase.

## CHALLENGE BELTING

A great market exists for rubber belting where the strength and high quality of Old Colony and Indian Head brands are not essential. Challenge offers maximum value to meet this demand for a good belt at a moderate price.

It would be difficult to overstate the features that make it a leader in its class. It is a trifle lighter than our better grades but yet sturdy enough for general transmission service, where moderate loads and favorable pulleys but no excessive speed exists.

We can also quote on popular advertised grades of rubber belting such as: Rainbow, Peerless, Durham and Huron.

We also are in a position to furnish special belts for special purposes, such as: Axle Dynamo, Oil Well, Special Stitched, Planer, Extractor, Hog Beater, Vanner, etc.

PRICE LIST  
RUBBER BELTING

Adopted by Mechanical Rubber Goods Manufacturers Association, April 26, 1910.  
In effect May 2, 1910.

For "Endless Belts," a charge of three feet additional to the actual pulley length is made.

### INSTALLATION AND MAINTENANCE OF BELTING

Correct alignment and lubrication are always essential.

Long center-to-center distances for horizontal drives, and short centers for vertical drives are recommended.

Rubber belting does not give the best service on half or quarter twists, cone pulleys or shifters.

All belt ends should be cut perfectly square and joined carefully, as this will insure true running and equal pull. There are a great many practical fasteners on the market, each with its own following. We, therefore, hesitate to recommend any particular fastener, and we list only those we know have merit.

The following list of Dos and Don'ts should be of interest to belt users.

#### DO

Secure good alignment.  
Balance pulleys.  
Use belt clamps.  
Lace carefully.  
Have driving side below.  
Have broad belts.  
Use large pulleys.  
Use moderate tensions.  
Have long centers horizontally.  
Have short centers vertically.

#### DON'T

Use vertical drive.  
Use quarter twist drive.  
Have driving side on top.  
Use strong tension.  
Use high crown pulley.  
Use shifters with guide bars.  
Use small pulleys.  
Use heavy belts.  
Use animal oils on belts.

We do not recommend rubber belts made endless for the reason that the glue used for splicing deteriorates, and the belts must be taken up frequently. In addition to this, the laps are liable to bulge. All this involves extra labor and expense.

## HINTS ON THE USE OF RUBBER BELTING

Precaution should be used in arranging pulleys and shafting, in order to obtain the full power and the full service. The diameter of the pulleys should be as large as it is possible to have them, as a belt stretches on the outside, while on the inside it compresses. In comparison with a leather belt, 4-ply rubber is equivalent to a single leather belt; 6-ply rubber is equivalent to a double leather belt.

The belt, before adjusted to the pulley, should be cut shorter than the distance around the pulleys by one-eighth to one-quarter of an inch for every foot, when measured with a tape or string. In narrow belts, butt the two ends together, making two rows of holes in each, and lace with lacing. On wide belts, in addition, sew on a thin piece of rubber or leather, to strengthen the joints. The seam side of the belt should always be placed outside and not next to the pulleys. In case the belt slips, which occurs very seldom, it is best to coat the side next to the pulley lightly with boiled linseed oil.

Grease and all animal oils are injurious to rubber belts. Especial care should be taken to protect the edges from them, as they are liable to decompose the belt.

## TO FIND THE LENGTH OF A BELT

When pulleys are small or about the same diameters, add the diameters of the two pulleys together, divide the result by two, and multiply the quotient by three and one-seventh. Add the product to twice the distance between the centers of shafts, and you have the length required.

5 ft. diam. one pulley.	20 ft. distance between centers.
3 ft. diam. one pulley.	2
2) 8 sum of diameters.	40 ft.
4 = $\frac{1}{2}$ sum.	12.57
$3\frac{1}{4}$	52.57 ft. = 52 ft. 6 $\frac{3}{4}$ in., length of belt.
12.57 ft.	

In putting on belting it should be stretched as tightly as possible, and with wide belts this can best be done by the use of clamps secured firmly to each end of the belt and drawn together by clamp rods running parallel with and outside the edges of the belt. There is no danger of breaking, as a belt six inches wide and 3-ply thick will stand a direct strain of 5,000 pounds, and other sizes in proportion.

## BEST METHOD OF LACING BELTING

The belt to be adjusted to the pulleys (depending on the thickness of the belt) should be cut shorter than the distance around the pulleys by  $\frac{3}{8}$  to  $\frac{1}{4}$  of an inch for every foot in length, when measured with a metallic tape or wire drawn tightly around the pulleys.

Wire Lacing—Pulley Side

Wire Lacing—Outside

## RUBBER CONVEYOR AND ELEVATOR BELTING

**"BANNER" BRAND CONVEYOR BELT**

Long Wear and Low Service Cost

"Banner" Brand Conveyor Belt is built for the hardest service, long hauls, and sharp heavy materials. For such service we recommend it as the best suited belt on the market.

**Tough Rubber Cover**—withstands abrasion—protects fabric from moisture and elements.

**Long-Lived Friction**—prevents ply separation—long vitality.

**Edge Construction**—will not peel, break loose or wear rough.

**Fabric**—special duck—extreme strength lengthwise and flexibility crosswise.

**Low Service Cost**—continuous service and large tonnage make "Banner" Brand cost less than other belts.

Made in any ply and width, and with padded surface covers, from  $\frac{1}{32}$  to  $\frac{1}{4}$  inch thick on one or both sides.

To order only.

**"BILT-WELL" BRAND CONVEYOR BELT**

A Dependable Belt for all General Requirements

"Biltwell" Brand Conveyor Belt is made to meet the needs where a high quality as "Banner" is not justified by the requirements. It will give excellent service under normal conditions. Its quality is high—much higher than many other grades on the market. Yet its price is moderate and it is economical in operation. It will outlast any other belt of its class.

Made in any ply and width and with padded surface covers from  $\frac{1}{32}$  to  $\frac{1}{4}$  inch thick.

To order only.

**ELEVATOR BELTING****INDIAN HEAD ELEVATOR BELT**

Indian Head is made specially for elevator service. It is particularly efficient on sulphur legs in grain elevating. It is made with a special sulphur fume proof cover.

To order only.

**CHALLENGE ELEVATOR BELT**

Made to meet ordinary conditions. Has a good duck and friction. Bucket holes punched upon request.

## LEATHER BELTING

We are the Chicago distributors for the **DETROIT OAK BELTING CO.**, one of the best known manufacturers of leather belting in the country. Their goods are so well and favorably known that we have adopted them as our standard of quality.

A careful inspection of their plant demonstrated to us their superior facilities for manufacturing high grade goods. They follow the policy that "anything worth doing at all, is worth doing well" and this is reflected in the quality and workmanship of their belting.

We carry at all times in Chicago stock, in all sizes, the following weights and grades:

**Best Grade Regular Single.**  
**Best Grade Regular Double.**

**King Regular Single.**  
**King Regular Double.**

**Velocity Double.**

Other weights can be furnished promptly upon receipt of order, direct from the factory.

## BEST GRADE

This belt is made to give the longest life and greatest durability under the most severe conditions. Cut entirely from center portion of the butt.

**HEAVY SINGLE**

**16 oz. or More According to Width**

For general use where a single belt of high quality and heavy weight is required.

**REGULAR SINGLE**

**14 oz. or More According to Width**

For general use where a medium weight single is required. Especially adapted to small pulleys at high speed.

**HEAVY DOUBLE**

**31 to 33 oz., According to Width**

An unusually heavy belt, recommended for service where pulleys are large and excessive horse-power demanded for width of pulley surface. Main belts, heavy saw mill drives and cement machinery are a few of the places.

**REGULAR DOUBLE**

**28 oz. or More, According to Width**

Our most commonly used weight, recommended for general service also where difference in diameter of pulley is considerable speed high, and these combined conditions make it inadvisable to use a belt that is too thick.

## LEATHER BELTING

### "VELOCITY" HIGH SPEED BELTING

Made in Double Only

This belt weighs 23 to 26 ounces per square foot according to width. Recommended for motors, flour mill rolls, wood-working machinery and high speed work, generally, where pulleys are sufficiently large. The belt is NOT made of shoulder stock, but is strictly center cut. Made in double weight only, not over 14 inches wide.

MADE IN ALL WEIGHTS

Our "Naiad" brand of belting is guaranteed to be absolutely waterproof and cut from the center portion of No. 1 belting butts.

It is made in various weights to suit the special conditions under which the belt is proposed to run.

Special belts made in this grade for blowers and fans in saw mills, planing mills, mines, etc., where it is damp.

#### THE BELT FOR DAMP PLACES

Besides local conditions incident to many manufacturing plants, such as saw mills, pulp mills, paper mills, also mines and laundries, there are climatic conditions in certain localities which make a high grade waterproof leather belt a necessity.

**Try our Naiad Velocity Double on your heavy planers when pulleys are 6 inches or over.**

Registered U. S. Patent Office

Made of selected side stock, carefully stretched and curried. A SHORT LAP belt at a moderate price. Can furnish in heavy single and regular double not over 12 inches wide, and medium single not over 8 inches wide. Also light single up to 6 inches and light double to 8 inches wide. There are many places where money can be saved by using this belt. You will be satisfied that it's a good belt and well worth the price. Heavy single 16 to 17 oz., medium single 14 to 15 ½ oz. and double 28 to 30 oz. according to width. Light single about 12 oz. and light double about 24 oz.

## IMPORTANT

Give Exact Tape Line Measurement

Do not try to avoid shortening your belts after being run awhile by shrinking the measurement when ordering, and then having to force them on the pulleys.

No one can tell the exact stretch of a piece of leather, and a belt will almost invariably become crooked at the point where it is forced on, owing to the unusual strain on a limited space, and the manufacturer is then accused of furnishing a belt with a spongy spot in it.

Care in this regard will save trouble for all concerned.

## CARPENCO STITCHED CANVAS BELTING

Our people have studied the manufacture of Canvas Belting for the past ten years, and the opportunity of building a new plant has enabled them to incorporate many new ideas and to install the latest design of machinery and labor saving appliances, which no other plant in the country possesses. This up-to-date equipment insures the most perfectly cured and finished Belting on the market.

The cotton duck used in the manufacture of "Carpenco" Belting is made from especially selected long staple cotton tightly woven on powerful high tension looms. We specify an extra hard twist in the warp and filer threads, giving great tensile strength to the duck. Every roll of "Carpenco" Belting up to 14 inches in width, is folded by our improved method of pressure rollers, thereby insuring mechanically perfect folding. Belting over 14 inches in width is "Built Up" by expert workmen, each ply having two selvage edges.

The compound used in the waterproofing of "Carpenco" Belting is a combination of pure oils and gums, which are neutral in character and will not injure nor harden the fabric, rendering a pliable Belt in all degrees of temperature.

The red paint is extremely elastic in texture and has ample body to protect the waterproofing compound and give maximum traction when in operation.

From the paint tanks the Belt is immediately conveyed to our stretchers, where the stretch is eliminated by the means of electrically driven power winches. The Belting is then allowed to remain on the stretchers until the compound is thoroughly set, thereby preventing the stretch from creeping back when the tension is released.

Carried in Chicago stock from 1½ inches, 3-ply to 24 inches, 6-ply.

## CHALLENGE STITCHED CANVAS BELTING

Challenge is of the same general construction as our "Carpenco," but it is made of lighter duck and is therefore desirable for lighter service.

It is not carried in stock, but is furnished to order only. Odd sizes are made special and require three weeks for manufacture.

### PRICE LIST STITCHED CANVAS BELTING

Charge for Splice on Endless Belts. All belts 12 in. wide or under, three feet is the minimum charge. Belts over twelve inches wide, the charge is to be the equivalent of three times the width of the belt.

## "CARPENCO" ENDLESS THRESHER BELTS

"Carpenco" Thresher Belts are stretched and cured by our improved method. They are thoroughly inspected and the splice tested before leaving our factory, making it practically impossible to produce a defective Belt.

Thresher Belts are always made endless and are three feet less in length than ordered. For example: An order for 100 feet is 97 feet long when made endless, and billed at 100 feet. The three feet are required to make the splice.

Always send this information when ordering special endless belts: Diameter of pulleys and distance between shaft centers.

### PRICE LIST AND STOCK SIZES OF ENDLESS THRESHER BELTS

Adopted by the Canvas Stitched Belt Manufacturers' Association.

Effective October 2nd, 1916.

Each belt is listed as an entire Belt. All other sizes and lengths made special to order.  
WE CAN ALSO QUOTE ON SAWYER BELTING

## ANCHOR WHITE COTTON SOLID WOVEN BELTING

We carry as large a stock of Cotton Belting as there is in this section, and can furnish it promptly in all piles and widths.

Cotton belting is particularly adapted for light transmission and conveyor work, and is therefore much in demand in flour mills, bakeries and other plants of this character.

## GENUINE BALATA BELTING

Balata belting is recommended for wet mines, tanneries and dairies—in fact any place where moisture and dampness prevail. It is positively proof against the action of water, acids and alkalies.

This belt is not proof against heat, owing to the nature of the compounds with which it is impregnated, and it will not give satisfactory service if used in warm places.

## STANDARD UNIFORM LIST GENUINE BALATA BELTING

Effective March 15, 1911

We quote on Dicks, Lanco and Victor Balata Belting upon receipt of specifications.

## "BLACK DIAMOND" BELTING

The compound, or waterproofing of "Black Diamond" belting is made from a heavy solid hydrocarbon gum which is forced into every fibre of the belt by heat and extreme pressure. This compound resists all alkalies and acids, as well as the action of direct heat. It will not stretch more than any good belt, as the compound sets quickly and keeps out the stretch. It is proof against the action of water, acids and alkalies.

"Black Diamond" Cotton Belting is recommended for conveyor service, particularly for hot silica and sands.

## PRICE LIST

## "BLACK DIAMOND" SOLID WOVEN COTTON BELTING

Effective October 1st, 1912.

## BELT FASTENERS

Fig. 336B

## "BEST GRADE" CUT LACING

This is strictly a "selected" grade. It is hand cut from the center portion or best part of the hide. Every strand in a bundle is stretched, tested and guaranteed perfect. Packed in cartons which protect the laces, keeping them clean and pliable.

Fig. 336C

## "BEST GRADE" RAWHIDE LACE LEATHER

In Full or Trimmed Sides.

No lime or acids are used in curing these hides, and only mechanical methods are used in softening, working and finishing them. This lace leather is cured—not tanned, and therefore never deteriorates. It can be kept in stock for years without growing hard or losing strength.

WE CAN FURNISH PROMPTLY ANY BELT FASTENER NOT SHOWN IN THIS CATALOG

## CRESCENT BELT FASTENERS

**NOTE:** Strain is equally distributed across entire width, thus maintaining maximum strength of the belt. No waste of belting and no bulk.

Acknowledged by belting authorities as the safest, strongest, most durable and most economical means yet devised for the joining of all power transmitting and conveying belting.

Crescent Plates are attached with Crescent Rivets which are self-piercing and merely separate the length-wise fibres of a belt, the prongs of which when clinched actually reinforce the belt at the joint. No holes are punched to weaken the belt. When necessary to shorten a belt due to stretch, simply remove Crescent Rivets from one end of a Crescent Plate, cut out the slack and rejoin at the small cost of a row of new Crescent Rivets.

**Adapted to all makes of belting of every length, width and thickness.**

To insure entirely satisfactory service select correct sizes of Crescent Plates and Crescent Rivets for your work as follows:

For Light Work—on 3 inch or larger Pulleys. Belts: $\frac{3}{4}$ to 3 inches wide use Crescent <b>Short Grip</b> Plates.		
No. 25 Crescent Plate will cover $\frac{3}{4}$ and 1 inch of belt width.....	per gross \$	2.38
No. 45 Crescent Plate will cover 1 $\frac{1}{2}$ inches of belt width.....	"	5.76
No. 65 Crescent Plate will cover 2 inches of belt width.....	"	8.64
No. 85 Crescent Plate will cover 2 $\frac{1}{2}$ inches of belt width.....	"	11.52
No. 805 Crescent Plate will cover 3 inches of belt width.....	"	11.52
For General Work—on 6 inches or larger Pulleys. Belts: 2 to 8 inches wide use Crescent <b>Medium Grip</b> Plates.		
No. 67 Crescent Plate will cover 1 $\frac{1}{2}$ inches of belt width.....	per gross \$	8.64
No. 607 Crescent Plate will cover 2 inches of belt width.....	"	8.64
No. 87 Crescent Plate will cover 2 $\frac{1}{2}$ inches of belt width.....	"	11.52
No. 107 Crescent Plate will cover 3 inches of belt width.....	"	14.40

## CRESCENT LARGE SHANK RIVETS

For attaching Crescent Short, Medium, Special and Long Grip Plates. Select these Rivets  $\frac{1}{8}$  inch longer than thickness of belting to allow for thickness of Plate and proper clinch.

Size .....	inches	5/16	6/16	7/16	8/16	9/16	10/16	11/16	12/16	13/16	14/16
Price .....	per gross	.70	.70	.80	.80	.90	.90	1.00	1.00	1.10	1.10

A Crescent Rivet Holder is included in each gross box of Crescent Large Shank Rivets.

**For Special Light Work at High Speed Use Crescent HIGH-SPEED Plates**

Crescent High-Speed Plates are for joining belts used for Light Work at High Speed.

See that both ends of the belt to be joined are cut square and true; this will ensure a perfect butt joint. Be careful in making joints, for a Crescent Joint properly made will outlast the life of the belt itself.

## CRESCENT SMALL SHANK RIVETS

For attaching Crescent High-Speed Plates should be used  $\frac{3}{16}$  inch longer than thickness of belt to allow for thickness of plate and proper clinch.

Size .....	inches	5/16	6/16	7/16	8/16	9/16	10/16
Price .....	per gross	.50	.50	.55	.55	.60	.60

**For Extremely Heavy Work Use Crescent JUMBO Plates**

Crescent Jumbo Plates are for extremely heavy work, large belts on long drives. This type of Crescent Belt Fastener is used on the longest and heaviest belts known, giving the most satisfactory service. They conform to the circumference of pulleys 24 inches or larger in diameter. This style is not recommended for belts running at high speed, except where very large pulleys are used.

These plates have zigzag holes, triples rows and are strong enough to hold ANY belt.

No. 1611. Will cover 3 inches of belt width.....	per gross	\$28.80
No. 2211. Will cover 4 inches of belt width.....	"	34.56

## CRESCENT JUMBO RIVETS

For attaching Crescent Jumbo Plates should be used  $\frac{5}{16}$  inch longer than thickness of belt to allow for thickness of plate and proper clinch.

Size .....	inches	10/16	11/16	12/16	13/16	14/16	15/16	16/16	18/16

## BRISTOL'S PATENT STEEL BELT LACING

No. 1

No. 11

Size No. 1 has a very short back, thus making the joint suitable for use on extra small pulleys. Used very extensively for joining single leather belts, and has given wonderfully satisfactory results.

**No. 1 STYLE (ASSORTED WIDTHS)**

Packed regularly in assorted widths, but will also be furnished packed to order, all one width, if so specified. Each box contains enough to lace 100 inches in width of belts.

This Style for LEATHER BELTS		Price per box 100 ins.
Size No. 00.	For split leather and extra light belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	\$1.00
Size No. 0.	For split leather and light belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	1.00
Size No. 1.	For ordinary single leather belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	1.50
Size No. 2.	For extra heavy and wide single leather belts, $\frac{1}{4}$ to $\frac{3}{8}$ inch thick.....	2.00
Size No. 3.	For double leather belts from $\frac{1}{8}$ to $\frac{3}{8}$ inch thick.....	2.50
Size No. 4.	For heavy double leather belts from $\frac{3}{8}$ to $\frac{1}{2}$ inch thick.....	3.00
Size No. 5.	For extra heavy double leather belts from $\frac{1}{2}$ to $\frac{3}{4}$ inch thick.....	3.50

**No. 11 STYLE (ASSORTED WIDTHS)**

Size No. 11 is extensively used for fastening woven and rubber belts. It will be noted from the illustration that this style of Bristol Lacing is so designed that the points enter the belt well back from the joint, thus firmly holding the ends of belt without tearing out.

Packed regularly in assorted widths, but will also be furnished packed to order, all one width if so specified. Each box contains enough to lace 100 inches in width of belts.

This Style for WOVEN BELTS		Price per box 100 ins.
Size No. 11.	For three-ply rubber and cotton belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	\$1.50
Size No. 12.	For four-ply rubber and cotton belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	2.00
Size No. 13.	For five-ply rubber and cotton belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	2.50
Size No. 14.	For six-ply rubber and cotton belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	3.00
Size No. 15.	For seven-ply rubber and cotton belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick.....	3.50
Size No. 17.	For eight-ply and extra double heavy rubber and cotton belts from $\frac{1}{2}$ to $\frac{3}{4}$ inch thick.....	4.95

**STAGGERED POINT STYLE (ASSORTED WIDTHS)**

The staggered point style is suitable for general use on both leather and woven belts. The staggered points enter the belt in double rows.

Packed regularly in assorted widths, but will also be furnished packed to order, all one width, if so specified. Each box contains enough to lace 100 inches in width of belt.

This Style for ALL KINDS OF BELTS		Price per box 100 ins.
Size No. 110.	For all kinds of belts from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick. Split leather and light rubber and cotton belts. Packed in assorted widths.....	\$1.00
Size No. 111.	For all kinds of belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick. Ordinary single leather belts and three-ply rubber and cotton belts. Packed in assorted widths.....	1.50
Size No. 112.	For all kinds of belts from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick. Extra heavy and wide single leather belts and four-ply rubber and cotton belts. Packed in assorted widths.....	2.00
Size No. 113.	For all kinds of belts from $\frac{1}{8}$ to $\frac{3}{8}$ inch thick. Double leather belts and five-ply rubber and cotton belts. Packed in assorted widths.....	2.50
Size No. 114.	For all kinds of belts from $\frac{3}{8}$ to $\frac{1}{2}$ inch thick. Heavy double leather belts and six-ply rubber and cotton belts. Packed in assorted widths.....	3.00
Size No. 115.	For all kinds of belts from $\frac{1}{2}$ to $\frac{3}{4}$ inch thick. Extra heavy double leather belts and seven-ply rubber and cotton belts. Packed in assorted widths.....	3.50
Size No. 117.	For all kinds of belts from $\frac{1}{2}$ to $\frac{3}{4}$ inch thick. Conveyor belts and eight-ply and extra double heavy rubber and cotton belts. Packed in assorted widths.....	4.95
Size No. 119.	For all kinds of belts from $\frac{3}{8}$ to $\frac{1}{2}$ inch thick. Ten-ply and extra heavy conveyor belts. Packed only in 3-point widths.....	6.05

**STAGGERED POINT STYLE (3-POINT WIDTHS ONLY)**

Packed in 3-point widths, including the two forms of hook (i. e., both long side pieces and short side pieces). Each box contains 50 pieces 3-point widths.

This Style for ALL KINDS OF BELTS		Price per box 50 pieces
Size No. 312.	For all kinds of belts from $\frac{1}{4}$ to $\frac{1}{2}$ inch thick. Extra heavy and wide single leather belts and four-ply rubber and cotton belts. Packed in 3-point widths only.....	\$1.10
Size No. 313.	For all kinds of belts from $\frac{1}{8}$ to $\frac{1}{4}$ inch thick. Double leather belts and five-ply rubber and cotton belts. Packed in 3-point widths only.....	1.70
Size No. 314.	For all kinds of belts from $\frac{1}{8}$ to $\frac{1}{2}$ inch thick. Heavy double leather belts and six-ply rubber and cotton belts. Packed in 3-point widths only.....	2.30
Size No. 315.	For all kinds of belts from $\frac{1}{8}$ to $\frac{1}{2}$ inch thick. Extra heavy double leather belts and seven-ply rubber and cotton belts. Packed in 3-point widths only.....	3.50
Size No. 317.	For all kinds of belts from $\frac{1}{2}$ to $\frac{3}{4}$ inch thick. Conveyor belts and eight-ply and extra double heavy rubber and cotton belts. Packed in 3-point widths only.....	5.50
Size No. 319.	For all kinds of belts from $\frac{3}{8}$ to $\frac{1}{2}$ inch thick. Ten-ply and extra heavy conveyor belts. Packed in 3-point widths only.....	9.00

## ALLIGATOR STEEL BELT LACING

"JUST A HAMMER TO APPLY IT"

A strong, smooth hinge joint for any width or kind of belting.

Packed Complete with Gauge and Hinge Pins

Lacing Size	Thickness and Kind of Belting	To Join in Width inches	Lacing Section inches	Price per Box
00	For printers or other tape belt not over $\frac{1}{16}$ in. thick.....	72	6	\$1.00
15	For light narrow single leather or fabric, $\frac{1}{8}$ to $\frac{3}{16}$ in. thick.....	64	8	1.15
20	For single leather, 3-ply fabric, etc., up to $\frac{1}{8}$ in. thick.....	60	12	1.15
F25	For single leather and fabric belts, $\frac{1}{8}$ to $\frac{1}{4}$ in. thick.....	48	8	1.15
G25	For single leather and fabric belts, $\frac{1}{8}$ to $\frac{3}{16}$ in. thick.....	96	12	2.25

M35	For double leather and fabric belts, $\frac{3}{16}$ to $\frac{1}{4}$ in. thick.....	32	8	1.15
N35	For double leather and fabric belts, $\frac{3}{16}$ to $\frac{1}{4}$ in. thick.....	48	12	1.70
U45	For heavy double leather and fabric belts, $\frac{1}{4}$ to $\frac{3}{8}$ in. thick.....	48	12	2.25
U55	For rubber, cotton or balata, $\frac{3}{16}$ to $\frac{1}{4}$ in. thick.....	48	12	2.60
X65	For rubber, cotton or balata, $\frac{1}{4}$ to $\frac{1}{2}$ in. thick.....	48	12	3.00
75	For rubber, cotton or balata, $\frac{1}{2}$ to $\frac{3}{4}$ in. thick.....	48	12	4.00

Nos. 00 and 15 are packed only with rawhide hinge pins. Nos. 20, 25, 27, 35 and 45 are packed regularly with rawhide pins and one sample rocker pin. Sectional steel "Rocker" pins only are furnished for Nos. 55, 65 and 75.

## CLING-SURFACE BELT DRESSING

Cling-Surface is not a sticky belt dressing, not a belt dressing at all, in fact, but a special treatment for special results.

It penetrates into porous belts and ropes, making and keeping them pliable, firm and waterproof all through and leaving the surface clean, so the whole belt grips the pulley and is in best health always.

It stops all slipping without stickiness, so every belt can be run easy or slack, as shown in cut, with minimum friction and maximum output, saving oil, power, time, work and worry and fuel.

It can be used for all sorts of belts and ropes and will preserve leather, cotton, camel hair and manila belts and ropes and will not injure good rubber or balata if properly used. It is being used widely in almost every manufacturing country, and you will find it to give you the results you want.

Price per pound .....\$0.60

## PEERLESS BELT GLUE

Price per pound .....\$1.00

**Directions:**—To prepare the Cement for use, cut in small pieces. Set in boiling water, which will dissolve it. If too thick, add small quantity of water. Apply with brush lightly to laps of belt and stick together before cement becomes chilled. Rub lap down thoroughly and let it set an hour before running belt.

## "OLD DUTCH" RUBBER CEMENT

Half pint cans.....	per doz. \$ 3.60
Pint cans .....	" 7.20
Quart cans .....	" 14.40

## COMET BELT DRESSING

Our Own Manufacture

An unusually high grade leather and rubber belt dressing.

Price per pound .....\$0.60

## STEPHENSON'S BELT DRESSING

In 1 lb. sticks.....each \$2.50

## "Old Colony" SHEET PACKING

A Reliable Packing  
for Many Uses

Our Reputation and  
Experience are  
Back of  
"Old Colony"

"Old Colony" is the result of years of experience in selling sheet packings made by the largest producer of this material in the world.

Before introducing "Old Colony" Sheet Packing, we specified the ingredients in its compound, so as to make it suitable for any duty that a sheet packing of this kind is expected to perform.

After a great number of exhaustive tests, under steam, hot and cold water and air pressures, we have passed and recommended "Old Colony" to give you satisfactory service for pressures up to 125 pounds or we will issue credit.

The distinctive features of "Old Colony" Sheeting Packing are:

- It is made up of more good rubber.
- It does not harden in stock when not in use.
- It weighs less to the square yard.
- It requires no following up at the joints.
- It is the cheapest packing in the end.
- It saves you Sunday work.

A trial order will bear us out.

Carried in stock in 100-lb. rolls in the following thicknesses, all 36 inches wide:  $\frac{1}{32}$  inch,  $\frac{1}{16}$  inch,  $\frac{1}{8}$  inch,  $\frac{1}{4}$  inch,  $\frac{3}{8}$  inch and  $\frac{1}{2}$  inch.

It is natural for every dealer or manufacturer to claim his packing the best. We believe that the best proof of any packing is a practical test, and will send enough "Old Colony" upon request to enable you to convince yourself that it is all we claim it to be.

## PACKING

## "BANNER" SUPERHEAT SHEET PACKING

For Highest Temperatures and Pressures

Banner Superheat Sheet Packing is made of a combination of carefully selected long asbestos fiber and rubber. It is built to withstand the highest temperatures and pressures up to 900 lbs. per square inch. It is particularly adapted to use with superheated and saturated steam, ammonia, alkali and acids. For all high pressure joints—cylinder and steam chest covers and the like—Banner Superheat can be depended upon. It can be excelled by no other high pressure packing on the market.

### SIX SUPERIORTIES

1. Thinner sheets—more joints to the pound.
2. Tensile strength over 3000 pounds.
3. No ply separation—joints break clean.
4. Smooth surface—absolutely tight joint.
5. Tested to 1200 and 900 pounds.
6. Joint remains permanently tight—vibration has no effect.

Banner Superheat is made plain or graphited in sheets 50x50 inches, and in thicknesses of  $\frac{1}{16}$ ,  $\frac{1}{8}$ , or  $\frac{1}{4}$  inch. The weight of the  $\frac{1}{8}$  inch thickness is about 5½ pounds per square yard. Free samples for testing upon request.

Price.....per lb. \$1.25

## RAINBOW SHEET PACKING

Carried in stock in 100 and 200 pound rolls in  $\frac{1}{32}$ ,  $\frac{1}{16}$ ,  $\frac{1}{8}$ ,  $\frac{1}{4}$ ,  $\frac{1}{2}$  and  $\frac{3}{4}$  inch thicknesses.

All rolls 36 inches wide. Extra widths 10% additional.

Wire inserted carried in stock in  $\frac{1}{8}$  and  $\frac{1}{4}$  inch thickness.

We can also furnish the following popular brands of sheet packing.

Ebonite	Usudurian	Jenkins' 96
Garlock 900	Ekonomy	Permanite
	Kearsarge	

## KAPLAN RED AND BLACK PACKING

Graphite One Side, Red Lead One Side

This packing is made from asbestos yarn and metallic wire, firmly twisted and woven together. It will withstand high pressure and is sufficiently elastic to compensate for expansion and contraction. Carried in stock in 200 pound rolls, in  $\frac{1}{32}$  and  $\frac{1}{16}$  inch thickness.

Price.....per lb. \$1.00

## PURE GUM SHEET PACKING

Pure gum sheet packing is made from the better quality of compound, and is recommended for cold water packing and squeegee rubbers. The standard sheets are 36 inches wide and can be had in thicknesses ranging from  $\frac{1}{32}$  to  $\frac{3}{4}$  inch, inclusive. Rolls contain either 100 or 200 lbs.

This packing varies in price from 30 cents to \$1.00 per pound, depending on the quality of the rubber in the packing.

## ALL WHITE ASBESTOS SHEET PACKING

For High Pressures and Temperatures

Especially adapted to the highest pressures and temperatures in connection with gas and gasoline engines, turbines, steel plant equipment, etc.

Made of long fibre asbestos yarn interwoven with wire insertion, and covered with a heat resisting compound which will withstand severe contraction and expansion.

Standard rolls 36 inches wide, contain about 100 and 200 pounds. Thickness,  $\frac{1}{32}$ ,  $\frac{1}{16}$  and  $\frac{1}{4}$  inch.

Price.....per lb. \$1.00

## CLOTH INSERTION SHEET PACKING

C. L., C. O. S. and C. B. S.

A popular style of packing for cold water and low pressures.

The grades we carry combine smoothness of finish, strength of cloth insertion and pliability. We stock it in thicknesses from  $\frac{1}{32}$  to  $\frac{1}{4}$  inch, inclusive. Each cloth, whether an insertion or on the outside, counts as one ply. Prices on application.

## SUNSHINE GASKETS

THE NEW IDEA

Fig. S91A

An Asbestos Tubular Tape that enables you to make your own Asbestos Gaskets. Keep it on hand. It saves Money, saves Time, saves Trouble and makes you independent of the Factory.

**DIRECTIONS:** Cut off enough tape to go around the flange of opening you want to pack. Attach the ends together with the copper fasteners furnished, sponge off about two inches at the joint with gasoline, wind with the adhesive tape, also furnished, and your Gasket is finished. Simple, isn't it? Packed in boxes containing 5 to 6 pounds. Price per lb. .... \$1.25

## BANNER SUPERHEAT GASKETS

Fig. S91B

Made of the same material as our Banner Superheat sheet packing.

They are acid, ammonia and oil proof to the highest degree and particularly adaptable for all service having highest pressures and superheated steam.

In all sizes and shapes,  $\frac{1}{32}$ ,  $\frac{1}{16}$  and  $\frac{1}{8}$  inch thick.

Price on application.

## C. I. OR C. B. S. GASKETS

Fig. S91C

C. I. or C. B. S. Gaskets, made in three grades, are of the highest quality rubber compound and possess great durability.

Each layer of cloth, whether it is inserted, or on the outside, counts as one ply—one to each  $\frac{1}{8}$  inch thickness. Brass or steel wire insertion if desired.

Most dependable and satisfactory for cold water service and low pressure steam packing. In all sizes, shapes and thicknesses.

When special shapes are required send blue print or sketch giving full information.

Prices on application.

We can also furnish for prompt shipment, at prevailing market prices: Eclipse Sectional Rainbow Gaskets, Ebonite Gaskets, Plain White Wire Inserted Gaskets, Kearsarge, Permalite, Rainbesto, Rainbow, Rainbow Wire Inserted, Heine Boiler Handhole, Heine Boiler Manhole.

### "Old Colony" GASKETS

"Old Colony" Gaskets are made from "Old Colony" Sheet Compound, therefore possess the same features and quality. They readily conform to the roughest faced flanges, neither blow nor squeeze out and will successfully withstand high pressure in connection with air, steam and water service. For any air, steam or water joint and in all sizes, shapes and thicknesses.

"Old Colony" Brass Wire Mesh Insertion or Cloth Insertion, are also made in all sizes, shapes and thicknesses. Possessing great flexibility and toughness, they are most effective and efficient for all high pressure service, especially marine, and for packing joints subjected to vibrations and shocks such as on threshing engines, road machinery, etc.

Rainbow Gaskets. Prices on application.

TABLE GIVES APPROXIMATE WEIGHTS ONLY

## EKONOMY SPIRAL AND RING PACKING

Designed for general use on steam (except pressures above 125 pounds, and for superheated steam), water, air, etc. In fact it can be used wherever a reliable packing is required.

Cut to exact measurement, and is quickly and easily applied. Elastic and durable. Made in any diameter, thickness or shape of ring. The spiral is carried in stock. The ring in solid and sectional is furnished to order only.

In ordering give exact diameter of rod, and inside diameter of stuffing box.

Packed in boxes as follows:

Size, inches	Feet	Weight, lbs.	Size, inches	Feet	Weight, lbs.
$\frac{3}{16}$	72	2 $\frac{1}{4}$	$\frac{3}{16}$	36	7 $\frac{1}{2}$
$\frac{1}{4}$	48	2 $\frac{1}{2}$	$\frac{5}{8}$	36	8 $\frac{3}{4}$
$\frac{3}{8}$	36	3 $\frac{1}{2}$	$\frac{3}{4}$	24	8
$\frac{7}{16}$	36	5	$\frac{7}{8}$	24	12
$\frac{1}{2}$	36	6	1	24	15

Table gives approximate weights in Spiral form.

## BANNER HIGH PRESSURE SPIRAL ASBESTOS PACKING

For High Pressure and Superheated Steam

Unsurpassed for all conditions of service under extremely high pressure and with superheated steam, also in connection with acids, greases and oils. Especially suitable for all types of high pressure steam and gas engines, turbines, air compressors, marine and railroad service, steel plant equipment.

In ordering rings, state diameter of rod, outside diameter of gland, depth of stuffing box and number of rings required. Also advise style of packing wanted.

## SPIRAL PISTON AND VALVE ROD PACKING

"Old Colony" Packing for piston and valve rods. "Old Colony" is not equalled by any other rod packing.

The core is surrounded by a superior quality duck thoroughly impregnated with graphite. The lubricant is of the purest and highest grade free from metallic and other substances of a harmful nature.

It is compounded to withstand high temperature, will not harden nor disintegrate, and will retain its life and elasticity indefinitely.

"Old Colony" Piston and Valve Rod Packing is as near perfection as is possible to make such and it will successfully and efficiently pack any rod under any condition of service excepting in connection with superheated steam.

Especially efficient for rods of pistons and valves that must move suddenly or intermittently.

Can be furnished in round or square style. State kind wanted.

In coil, spiral or ring form as desired. When ordering ring style state diameter of rod, outside diameter of gland, depth of stuffing box or number of rings required.

## PEERLESS PISTON AND VALVE ROD PACKING

For those who prefer we can ship promptly any of the Peerless piston and valve rod packings, made of Rainbow quality compounds, at prevailing market prices.

## CANVAS HYDRAULIC PUMP PACKING

## PEERLESS SPECIAL

Peerless Special Canvas Pump Packing is strictly of the highest grade, being made of a fine and closely woven duck frictioned with a white rubber compound.

To meet the different service requirements it is made in the following degrees of hardness—  
Rock Hard and Medium.

**Rock Hard** is vulcanized to withstand the higher temperatures, being especially adaptable for hot water service such as packing hot water pumps. This grade will not soften nor lose its efficiency under the most severe conditions. Also highly effective for very heavy hydraulic work.

**Medium** is particularly for cold water service such as packing cold water pumps, elevator plungers and rams.

In coil or ring form as desired.

When ordering rings, state diameter rod, outside diameter gland, depth of stuffing box or number of rings required.

List price per pound. . . . . \$1.00

## CHALLENGE HYDRAULIC PUMP PACKING

This packing is made of a high grade duck, and frictioned with a good grade of compound.

It is particularly adapted for conditions not quite so severe as those for which we recommend Peerless Special, and will give the utmost satisfaction under practically any working conditions.

List price per pound. . . . . \$0.70

The Peerless and Challenge Packings listed on this page are packed in boxes as follows:

Size inches	Feet	Weight lbs.	Size inches	Feet	Weight lbs.	Size inches	Feet	Weight lbs.	Size inches	Feet	Weight lbs.

## TUCK'S PACKING

Square, Round and Rubber Back

This well known form of packing is used so universally that no detailed description is required. Our Tuck's packing is made of a close woven duck, frictioned with black rubber compound. The quality is of the highest and the packing is adaptable to the most severe hydraulic service of all kinds. Furnished in 25 foot lengths (coils).

Price per pound . . . . . \$0.50

## "Old Colony" SQUARE BRAIDED FLAX PACKING

### Coil Form

This packing is most satisfactory and durable for cold water pump plungers, hydraulic presses, elevator plungers, steam glands, accumulators, etc., where a highly dependable packing of this nature is required.

Made from the best grades of long fibre flax. Braided solid and contains neither jute nor hemp. The compound with which it is impregnated contains no foreign ingredients nor grit, and is of the proper amount to insure the most satisfactory service.

This packing is one of the first we ever sold, and has been standard for over thirty years. It is our best grade and is so sold to anyone who wants a first class, square flax packing.

Price, per pound..... \$1.00

Can be furnished in reels if desired.

Size inches	Feet	Weight lbs.	Size inches	Feet	Weight lbs.

1	17	8 1/4	2	19	22
1 1/8	17	9			

## TUEX SQUARE BRAIDED FLAX PACKING

Of the same general construction as our Old Colony brand, except that the fibre is a little shorter. The process of manufacture is identical with our other grade.

Tuex is suitable for work under ordinary conditions.

Price, per pound..... \$0.75

## "BANNER" ASBESTOS VALVE STEM PACKING

### Twisted and Braided

For air pumps, air brakes, throttles, radiators and other small valve stems.

Made of pure long fibre asbestos, perfectly lubricated with our own compound, making it flexible, soft and very strong. It will neither harden nor work injury to valve stems. Resists highest temperatures and pressures.

Both the twisted and braided are put up on 1-pound metal spools. Furnished in reel form in any quantity desired. Sizes from 1/8-inch up, advancing by 16ths.

Price, per pound..... \$1.50

## MISCELLANEOUS PACKINGS—AUTOMOBILE TIRES

In addition to the extensive line of packings listed on the preceding pages, we carry in stock a great many of the advertised brands.

Space does not permit full descriptions of all the following packings, but each one listed is a well known brand. If your favorite is neither on the other pages nor on this page, kindly advise us and we will furnish any information concerning it.

## AUTOMOBILE TIRES

Our experience in handling tires has been such that we are now confining our entire efforts to the Diamond and Goodyear grades, for the reason that they are both well-known makes and represented by the better manufacturers. Having a direct agency on the Diamond and Goodyear Tires, we are in a position to quote you the very best market prices prevailing at all times.

We also carry a very complete line of accessories, such as tubes, tire patches, sleeves, vulcanizing rubber inner and outer shoes.

Write for prices.

## RUBBER PUMP VALVES

No other article in the mechanical rubber industry requires the practical scientific knowledge as do Pump Valves in order to be properly compounded for their many different and exacting service conditions.

The most satisfactory and proper results will be obtained by use of a pump spring with sufficient capacity only to work under the pressure, head or lift. That is, use a spring having sufficient compression only to "seat" the valve without undue pressure. See index.

## VALVE SPECIFICATIONS

## HOT WATER STYLES:

## STYLE 334

Stock—Extra hard.  
Service—Hot water.  
Pressure—Highest.  
Temperature—Highest.

## STYLE 300

Stock—Hard.  
Service—Hot Water.  
Pressure—Up to 200 lbs.  
Temperature—Up to 200°.

## STYLE 330

Stock—Soft gray.  
Service—Cold water.  
Pressure—Up to 110 lbs.  
Temperature—Lukewarm water.

## STYLE 325

Stock—Medium gray.  
Service—Cold water.  
Pressure—Up to 150 lbs.  
Temperature—Cold water only.

## CONDENSER VALVES:

## STYLE 345

Stock—Soft, red.  
Service—Condenser.  
Quality—Soft, tough, light weight. Fine Para valve.

## STYLE 355

Stock—Soft, red.  
Service—Condenser.  
Quality—One of the best condenser valves made.

## COLD WATER STYLES:

## STYLE 320

Stock—Medium hard, gray.  
Service—Cold water.  
Pressure—Up to 160 lbs.  
Temperature—Cold and lukewarm water.

## STYLE 324

Stock—Hard and tough.  
Service—Cold water.  
Pressure—Up to 400 lbs.  
Temperature—Cold water only.

## AIR AND VACUUM STYLES:

## STYLE 360

Stock—Soft, gray; Service—Air and vacuum; Pressure—Low; Temperature—To 200°.

## SPECIAL LOW PRICED LINE

"H. W." Standard hot water valves for medium service.

"S." Soft valve for medium cold water service.

"M." Medium valve for service in cold water, pressure up to 150 lbs.

## HARD RUBBER VALVE DISCS

For Russell, Frink, Walworth, Jenkins and Kelly & Jones Valves

Particularly suitable and satisfactory for use with air, acid, ammonia, gas, oil, steam, etc., also with water, either cold or hot. Will neither soften nor leak.

When ordering, be sure to state size and make of valve, service for which intended, and whether the round or the oblong hole is required.

In ordering suction hose of any kind be sure to specify whether or not the ends are to be enlarged for nipples.

Couplings up to six inches in diameter. Nipples any size. Globe or Basket Strainers with or without handles.

## "Old Colony"

Under this brand and style we handle Air Drill, Brewers, Creamery, Malt, Pneumatic Tool, Sand Blast, Steam and Water Hose.

The principle of their construction is the same, namely: A combination of Braided Jacketed Yarns as the back bone, and the wrapped special duck to give it proper strength, against heavy pressures, severe handling and the greatest abuse.

These are the distinctive features of "Old Colony" Hose:

Heavy rubber cover.

Distinctive method of applying cover to hose.

Great tensile strength of braided jacket.

Best possible friction for each particular kind of hose.

Duck used is specific for each purpose.

Tubes compounded to meet conditions for which they are intended.

Which result in:

First. It is possible for "Old Colony" Hose to withstand excessive dragging over rough and jagged surfaces.

Second. Adds strength to the cover, keeping the fabric from being exposed.

Third. Gives "Old Colony" construction excessive tensile strength under pressure, flexibility and firmness.

Fourth. Is responsible for the long life and durability.

Fifth. Is necessary to conduct the material and remain intact.

Sixth. Has helped to make "Old Colony" the hose the reputation it now enjoys. The tube is the heart of any hose, and as long as it remains intact you will be able to receive service from it.

We have studied from every possible angle the uses and abuses of hose, and are able to furnish it to you on a money-saving basis.

The M. C. B. Standard type of label which is our brand on "Old Colony" is there for a purpose. It will enable you to keep an exact record of how long your hose served you.

You will note on this label at the right hand side, numbers from 16 to 19, by which you can designate the year. The numbers 1 to 12 in the first row after the letter "A" represent the month when attached or applied. Removing the number of the month and year will enable you to ascertain exactly, after the hose has served its purpose, how long it stood the test. The lower row of figures can be utilized in the same way, by removing the number of the month, so that should you wish to know at any future time how long the hose has been in service it will be there before you.

"Old Colony" Hose is not a cheap hose, and we will positively guarantee it to give you full value if properly applied. If it fails credit will be issued according to the amount of service rendered.

## BANNER SUPERHEAT HOSE

This hose is especially adapted for highest pressures and superheat. It is made to take care of lighting and power plants where the pressures are from 125 to 175 lbs.

The secret of Banner Superheat hose is in the tube. It remains soft and pliable after being subjected to this abnormal test. For continual service over rough surfaces, we recommend a woven or braided, painted cotton jacket. Prices on application.

## EKONOMY STEAM HOSE

This grade of steam hose is made to meet the requirements of low pressures ranging from 25 to 100 lbs. steam pressure.

It is made of a heavy duck and can be used with the greatest safety under these conditions.

Carried in stock in all sizes up to 1½ inch. 6 ply. Plain or wire wound.

**"Old Colony" WATER HOSE**

Having had unlimited success in the sale of our "Old Colony" Steam Hose, we adopted a Water Hose of the same type.

It has the same heavy hand made course cover, forced through the braided jacket and vulcanized, which give the other wrapped layers of duck the necessary protection, helping to keep the tube intact.

The initial cost of "Old Colony" Water Hose is higher, but we will guarantee extra service, which means saving money on account of fewer stops for repairs, and many worries.

**"Old Colony" NON-KINK BREWER'S HOSE**

It is essential in the manufacture of good Brewer's Hose, that it should not be affected by either hot or cold liquids. "Old Colony" hose is made to meet these requirements.

The extra heavy tube in this hose is so compounded that it is not affected by any service that is expected of any good brewer's hose. The cover is heavy and well made, to prevent chafing or cracking when dragged over cement floors.

We have records to show that "Old Colony" Non-Kink Brewer's Hose has given from 5 to 12 years service.

We can furnish this hose in any of the following styles:

White cover and white tube.

Black cover and black tube.

Red cover and red tube.

or any combination of these colors.

List price same as steam hose, shown on preceding page.

**ECONOMY BREWER'S HOSE**

Made to meet conditions where "Old Colony" is not required. Furnished in white tube and cover only.

**CHALLENGE MOLDED WATER HOSE**

Challenge Molded Water Hose is made of all braid construction. It is flexible and does not kink. Will withstand considerable pressure. Made in 500 foot reels, enabling us to furnish this hose in any length wanted, in one piece.

Carried in stock in  $\frac{1}{2}$ ,  $\frac{3}{4}$ , 1,  $1\frac{1}{4}$  and  $1\frac{1}{2}$  inch in two braid, and  $1\frac{1}{4}$  and  $1\frac{1}{2}$  inch in three braid.

**PILOT WATER HOSE**

For those wanting a hose for ordinary service, and where it is not economy to use the best, we carry in stock Pilot Water Hose. This is a wrapped hose in 50 foot lengths and will give very satisfactory service for general work. Better than any other for the money.

We also make and carry a complete line of rubber specialties for brewing requirements, among which are: Cloth inserted beer tubing, tapping rubbers, bung washers, rubber mallets, valves, rubber boots, aprons, gloves, gaskets, packings and molded specialties.

LIST PRICES ON THE ABOVE HOSE ON PAGE 863

## "Old Colony" AIR HOSE

The product of our many years of experience in marketing various grades and styles of pneumatic air hose. The air hose of today must be built to withstand a greater range of service, and abuses, than the earlier types.

"Old Colony" is recognized as the most flexible tool hose yet produced. The advantage of this flexibility is at once understood by the structural steel worker, and consequently it is the most used and best liked hose by all who have worked with it.

The flexibility of "Old Colony" is due to the use of the purest high grade elastic rubber. The fabric is of the basket weave, braided yarn construction. The tube is oil proof and very tough.

The results of a recent test of pressure resistance, between "Old Colony" braided type hose and the common wrapped hose prove clearly that "Old Colony" is a wonderful product:

½-in., 3-braid "Old Colony" burst at 1350 lbs.

¾-in., 2-braid "Old Colony" burst at 1025 lbs.

½-in., 7ply wrapped hose burst at 125 lbs.

¾-in., 7-ply wrapped hose burst at 100 lbs.

Many of the lengths of "Old Colony" burst at much greater pressures than those above, which are those of the weaker and average sections. These figures are conclusive evidence of the superiority of "Old Colony"

## CHALLENGE MOLDED AIR HOSE

Made in 500 foot lengths put up on reels, from which we can cut any desired length, eliminating unnecessary couplings and avoiding leaks. Carried in stock in the following sizes: ¾-inch, 2-braid, and ½, ¾, 1 and 1-inch in 3-braid.

This is a very flexible molded air hose which will stand considerable pressure and abuse.

## ECONOMY AIR HOSE

A 7-ply wrapped hose, which is the least expensive type and is used where a high priced hose is not essential.

The cheapest guaranteed air hose made. Carried in stock in ½ and ¾-inch only.

## "Old Colony" SAND BLAST HOSE

In order to make a sand blast hose practical it is necessary to embody in its construction the very toughest Para rubber. This will withstand the action of the sand which is used to clean steel and iron castings. "Old Colony" is constructed to give the best service for such conditions. We recommend the ¾-inch tubes for greatest economy.

Furnished in 3-ply, ¾ to 2 inches, with ¾ to 1-inch tube, and 4-ply, 2 ¼ and 2 ½ inches, with ¾ to 1-inch tube.

Any of the above grades of air hose can be furnished plain or wire wrapped.

LIST PRICES ON THE ABOVE HOSE ON PAGE 863

**"Old Colony" CREAMERY HOSE**

Particularly suitable for the dairy and creamery trade. A hose of ordinary construction will not stand the action of grease, acids and butter fats, or the rough handling that is given a piece of hose.

This hose has the same construction and fabric as Old Colony Steam and therefore carries with it the same guarantee for service.

**PRICE LIST**

I. S. Dia.	3 Ply	4 Ply	5 Ply
$\frac{1}{2}$ in.	\$0.47	\$0.56	\$0.70
$\frac{3}{4}$ in.	.57	.71	.87

$1\frac{1}{2}$ in.	1.02	1.25	1.56

**"Old Colony" WASHOUT HOSE**

Designed for railroad use to conduct hot or cold water. It will not become hard and brittle from the excessive heat from the fire box or the steam and water.

**GASOLINE HOSE****UNDERWRITERS' GRADE**

A four ply wire lined hose. This hose is passed and accepted by the Underwriters' Laboratories of Chicago as it is made according to their specifications.

**CHALLENGE GRADE**

Made of the same number of plies of duck as the above hose and is made to meet conditions where an expensive hose is not desired. These two grades are carried in Chicago stock in 8 foot and 10 foot lengths,  $\frac{3}{4}$  inch and 1 inch diameter. Coupled with nickel plated couplings or plain ends.

We are also in position to figure on your requirements on following:

Acid Hose

Auto Radiator Hose

Coke Hose

Chemical Hose

Divers Hose

Soda Hose

Spray Hose

Pure Gum Tubing

Suction Hose (Hard Rubber)

Wine Hose

Hydraulic High Pressure Hose

Our service department is at your disposal on any matters that require something out of the ordinary.

## "Old Colony" CORRUGATED DREDGING SLEEVES

Our improved type dredging sleeves are reinforced to prevent bulging or sudden expansion, and have proved a boon to dredging sleeve users.

They are made of the very finest pure gum in tube, friction and cover. The duck is the heaviest used in any hose construction and at the same time is flexible.

A trial of the Old Colony Corrugated dredging sleeves will at once demonstrate their superiority over others.

Prices upon application.

### Seamless Hydraulic Cotton Hose

We also carry for prompt shipment, seamless hydraulic cotton hose, circular woven, in sizes from 3 to 12 inches. Prices quoted upon receipt of specifications.

### Hydraulic Mining Hose

Write us for prices on Hydraulic Mining hose. We have it in the 6 inch diameter, made of triple sewed cotton duck, in thicknesses from 2/0 to 12/0.

### Cotton Conducting Hose for Mines, etc.

For conducting service in Mines, etc., we have a superior grade of strong and inexpensive seamless cotton hose. Full rolls consist of 400 foot lengths, but we will cut and ship any length desired. Sizes from 3/4 to 12 inches. Prices upon receipt of specifications.

### Anaconda Engine and Tender Hose Connection

The most popular and widely used Engine and Tender hose connection in the world. Manufactured particularly to conduct either hot or cold water. All master mechanics and road engineers back up any claims made for Anaconda.

Metal Steam Hose

For those who prefer the use of a metallic steam hose, we are in position to furnish immediately, any quantity desired. We consider our brand the best on the market. **Prices on request.**

Illustration above shows an 18 foot length of 3/4 inch hose, with packed couplings and reinforced ends attached. One end covered with asbestos and brown duck.

## SUCTION HOSE

### "CHALLENGE SUCTION HOSE"

Users of "Challenge" Suction Hose are most emphatic in their praises of this particular brand. Because of the severe conditions met with in such service Challenge Hose is built around a very good tube, which resists to the greatest possible extent, the cutting action of sand, gravel sharp stones and rocks, and other substances which destroy a cheaper hose.

"CHALLENGE" Suction Hose is recognized by the exceptionally heavy flat steel wire which prevents collapsing or kinking. We have had cases where CHALLENGE Suction Hose has had loaded wagons and wheelbarrows pass over it without causing any perceptible damage.

Challenge is furnished complete with nipples vulcanized in the hose and wired on with a heavy copper wire under tension, then soldered. This method of inserting nipples has proven the greatest possible boon to users on account of the fact that it prevents pulling off either when making the connections to the pump, lowering in place, or vibration while under service. This not only saves possible loss by injury but time plugging up a leaky connection.

When a female end is desired we furnish a regular heavy iron pipe union, which makes the same connection as a male and female coupling.

### "Old Colony" OIL SUCTION HOSE

Is made to order only, as a hose of this character is of a specific nature and requires special compounding to withstand the action of hot or cold oils.

### MISSISSIPPI RIVER SPECIAL

We have made a special study of sand and gravel suction hose larger than 5 inches in diameter. We have furnished a great number of pieces to users of this hose along the Mississippi River and have met with unlimited success.

Prices furnished on application.

### VACUUM HOSE

We can furnish the light flexible hose for use in the smaller and lighter household machines and larger hose for use in hotels, apartments and public buildings. Also a grade used by cleaning service companies from the street to the house.

When ordering, please state the service for which the hose is intended, how the ends are to be prepared, whether wire shall terminate at the ends, or whether the ends are to be made soft so as to take care of the couplings, and what distance back. Also state if plain or covered hose is wanted.

Sterling Suction Hose can also be furnished if desired.

### AGRO WIRE LINED SUCTION HOSE

Furnished in 2 inch size only, plain and cotton jacketed cover. This hose is the cheaper kind, particularly adapted for agricultural work. Made with enlarged ends so that it can be attached to pipe very easily.

LIST PRICES ON THE ABOVE HOSE ON PAGE 863

## MOLDED GARDEN HOSE

500 Foot Reels

All Braided Fabric Construction—A Grade For Every Requirement

In order to meet the varying desires and needs of our trade, our line of Molded Garden Hose affords a wide range of choice. A slight difference is made in the quality of the different rubbers to adapt each one to the particular conditions of service and cost surrounding the use of each hose.

We believe it pays to buy only a good grade of hose, which with proper care will last many seasons. Accordingly, we take particular care to market only qualities that are the best obtainable value at the price. That means longer service, greater economy, and more satisfied customers.

The method of construction of our Garden Hose—the Braided Fabric Type—is not like the wrapped type. Braided Fabric Hose is built up as one piece around the rubber tube. The strands are woven in one united continuous length. They are built right into the hose. That makes it stronger and prevents kinking or unwrapping.

The strands are of very strong cotton thread only and with a great tensile strength. The finest rubber is used for the tube.

All molded Garden Hose is made in approximately 500 foot lengths without extra charge. Sizes ready for immediate delivery:  $\frac{1}{2}$  inch,  $\frac{5}{8}$  inch,  $\frac{3}{4}$  inch diameter.

"Old Colony"

"Old Colony"—For unusually severe service. Withstands kinks, twists, corner posts or sharp stones. Flexible and tough. The last word in Garden Hose Construction. Unquestionably the best hose that money, experience and careful workmanship can produce.

With ordinary care Old Colony is guaranteed to last at least 5 years.

WRAPPED GARDEN HOSE

The wrapped style of construction in garden hose represents the original method of making garden hose. The hose is made of long pieces of bias cut material, wound around a rubber tube. It is possible to make this hose more economically than the moulded and braided types, which accounts for the difference in price. The wrapped hose is generally used for ordinary garden duty, or for construction work.

We always carry in stock the wrapped style of garden hose,  $\frac{1}{2}$  and  $\frac{3}{4}$  inch inside diameter, in 4, 5, 6 and 7 ply, under the following brands:

$\frac{3}{4}$ inch, 4 ply	Winner	per foot	\$0.15
$\frac{3}{4}$ inch, 5 ply	Acme	"	.16
$\frac{3}{4}$ inch, 6 ply	Red Hummer	"	.17
$\frac{3}{4}$ inch, 6 ply	Colonial	"	.18
$\frac{3}{4}$ inch, 7 ply	Empress	"	.19

$\frac{1}{2}$  inch 1 cent per foot less.

Each length is coupled with brass shell couplings, all for  $\frac{3}{4}$  inch connection.

Every length is guaranteed for one season.

We also carry Cotton Rubber Lined Hose,  $\frac{1}{2}$  and  $\frac{3}{4}$  inch inside diameter,  $\frac{3}{4}$  inch couplings.

## LAWN SPRINKLERS

Fig. 910A.  
PLUVIUS.Fig. 910B.  
COLUMBIA.Fig. 910C.  
CYCLONE.Fig. 910D.  
YANKEE.

The Pluvius is ball-bearing revolving with the slightest pressure, and covers a large or small circle according to the water pressure. It has a movable brass swivel at the base for making connection with the hose.

The Columbia is a very popular style of sprinkler, having revolving parts that do not wear out, and it runs for years. Similar to the Cyclone and Preston shown below.

The Cyclone has three arms, as shown in the engraving.

The Yankee is supported on a sled made of malleable iron about 12 inches square, so it can be drawn over the lawn. A very attractive looking accessory.

Name	Height inches	No. of Arms	Price per dozen	
			Brass Arms	Nickel Plated Arms
Pluvius .....	11	3	\$16.00	\$17.00

ZENITH.Fig. C910.  
PRESTON.Fig. D910.  
MAYFLOWER

Midget Sprinklers are now equipped with the same head as that of the Zenith, improving the working of the sprinkler very materially.

Zenith Sprinklers represent a new principle in the revolving sprinkler head, and have eliminated friction as far as possible in a lawn sprinkler which is not ball-bearing.

The Preston is a reliable, satisfactory sprinkler, becoming very popular.

The Mayflower has a high base, brass movable swivel for hose connection. Has brass head japanned red.

Name	Height inches	No. of Arms	Length of Arms inches	Price per dozen	
				Brass Arms	Nickel Plated Arms

## COTTON RUBBER LINED MILL HOSE

**Eureka Mill Hose** is a single ply seamless woven hose, intended particularly for manufacturing establishments, warehouses, piers, hotels and public institutions or anywhere that hose is kept attached to standpipes, etc.

**Trojan Mill Hose** is of the same general construction as Eureka and is much in demand for similar service under less pressure.

**Pioneer Mill Hose** is a dependable brand, although not the equal of two above mentioned brands. There is much of it in use.

Carried in stock up to 2½ inches, coupled or uncoupled.

## LINEN HOSE

**"Eureka 20th Century" Linen Hose.** Our red, white and blue color stripe in this brand is separated, having the plain unbleached yarn between colored strands. Labeled strictly in accordance with the requirements and specifications of the Underwriters.

**Underwriter Standard "Worthy" Linen Hose.** The color stripe in "Worthy" consists of a continuous white stripe of 4 warps between zigzag red and blue lines of 4 warps each separated by 8 plain warps. This hose competed favorably in its ability to conform to requirements of high standard tests with any flax hose manufactured except Eureka Best and 20th Century, and may be installed with perfect confidence in its reliability in any place where highest grades of other makes are acceptable. Labeled strictly in accordance with the requirements and specifications of the Underwriters.

Made in any length up to 300 feet inclusive.

**"Trade" Linen Hose.** The stripe in this brand consists of three red and two brown strands.

**"Red Ball" Linen Hose.** Stripe consists of a red strand and one of orange.

## COTTON RUBBER LINED FIRE HOSE BANNER UNDERWRITERS' SINGLE JACKET FIRE HOSE

Built According to Specifications of the Underwriters' Association

Banner Underwriters' Single Jacket Fire Hose is a 2½ inch, cotton jacketed, rubber-lined hose for use in mill and factory fire protection. It is built carefully in conformance to the Underwriters' specifications. Also furnished in 1½ and 2½ inch, single and double jacket.

But more than that, there is built into Banner Brand quality and life-giving elements which add a margin of safety in excess of the mere requirements of the Underwriters' Association. It has long life and exceptional value. It is on the approved list of the Associated Factory Mutual Fire Insurance Companies, Boston, Mass.

### Suggestions For Increasing Life of Hose

1. All cotton rubber-lined hose should be wound on reels—not folded on racks.
2. Folding is very harmful to the rubber lining—liable materially to shorten life of hose.
3. Water should be passed through cotton rubber-lined hose about once every three months.
4. Hose should be dried thoroughly after each use before reeling up.

## EUREKA U. S. FIRE HOSE

This is a well known hose, made by the Eureka Fire Hose Manufacturing Co., and is made in accordance with the specifications of the National Board of Underwriters. Furnished in 1½, 2½ and 3 inch size, coupled or uncoupled.

## "Old Colony" DOUBLE JACKET FIRE HOSE

The Maximum in Efficiency and Economy

"Old Colony" Double Jacket Fire Hose yields high efficiency and economy because it is made of a high quality of cotton fabric and a rubber exactly adapted to the purpose for which it is intended. This quality of material combined with careful workmanship gives the "Old Colony" Fire Hose a durability in construction that will pay premiums on the investment. It means longer life and greater satisfaction in service.

Provision is made for the unusual demands that may frequently be placed upon fire hose. "Old Colony" Double Jacket Hose will carry a 400 pound tested pressure and is free from leaking defects.

The economy in per-foot cost is one of the astonishing features of "Old Colony". While of high quality and dependable in service, its original cost is moderate. For actual value it is equal to any hose on the market at the price.

## WHITE STAR DECK HOSE

"White Star" is an especially constructed Deck Hose. It is similar to the wrapped duck water conducting hose, except that it has a rubber coated duck cover which protects the hose from the wear and tear resulting from constant dragging over decks, hard floors and rough surfaces or around sharp corners on board ship.

The standard construction used is four and five plies—that is, three and four plies on the inside and the rubber coated and rubber impregnated cover.

We have found that our hose will give longer service on account of its unique style of cover which is placed on the other layers in spiral form, which makes kinking almost an impossibility.

"White Star" Deck Hose has been adopted by a number of Lake Lines because of its service record.

Carried in stock 1 1/4 inch 4 ply coupled or uncoupled.

1 1/4 inch 5 ply " " "

1 1/2 inch 4 ply " " "

1 1/2 inch 5 ply " " "

Can be furnished wire wound if wanted.

## CARPENCO RUBBER SHEET TILING

Fig. 0472, Design 48

Carpenco Rubber Sheet Tiling is now recognized as the ideal flooring for elevators, aisles, corridors, lobbies, and other places where a high grade sanitary material is desired.

This sheet tiling is entirely different from any other floor covering on the market. It will outlast six carpets or cork linoleums, and is guaranteed to lie perfectly flat on the floor at all times. Being made in large rubber sheets, bulging or spreading at seams is prevented and moisture is kept from the cement.

Guaranteed to leave no odor and clean easily. Soft under the feet, and is noiseless.

Made to order in a great variety of designs and combinations of color effects.

Furnished in  $\frac{1}{4}$  inch,  $\frac{5}{16}$  inch and  $\frac{3}{8}$  inch thickness.

Estimates cheerfully and promptly furnished upon request.

Fig. 0473, Design 50

## "OLD COLONY" PERFORATED MATS

## TUBULAR ALL METAL HOSE REEL

Undoubtedly the best garden hose reels on the market, having a number of exclusive features. The reeling or unreeling is very easy, as the frame can be tipped down to support the reel clear of the ground, and there are no exposed spokes to interfere with either operation.

These reels cannot tip over when unreeling, and the large rims forming the wheels make them very easy to move about.

There is no weight to carry with the style "B" reels, as the weight of the hose is borne upon the rims and is not carried on the handle as in other types.

Absolutely all metal, tubular steel rims and frame, steel spokes and malleable iron castings; Nos. 10 and 20 have corrugated galvanized drum.

## YALE HOSE RACKS

Fig. 904A  
Style NFig. 904B  
Style OFig. 904C  
Style PFig. 904D  
Detail Showing  
Method of Hose  
Suspension

The hose is suspended from an extension arm by a series of brass clips in such a way that there is no pressure on either the edge or the fold of the hose. When the valve is opened the pressure of the water is sufficient to free the hose from the clips without any possibility of injury to the hose or rack. It is a satisfactory "one-man" device.

## BOWES' HOSE RACKS

Fig. 904E  
Style EFig. 904F  
Style FFig. 904G  
Style G

The style of Bowes' hose racks shown above have a shield on each side to hide the pins and supporting arms. They represent a most practical and reliable pin rack, their distinctive advantage being that the pins or supporting rings do not fall to the floor when the hose is pulled from the rack as in the case of similar racks.

No.	Style	Kind of Material	Capacity Unlined Linen Hose, Feet	Size Hose inches	Price, each

In ordering state size of pipe to which rack is to be attached. All Bowes' racks are packed in individual wooden boxes.

## HOSE RACKS AND REELS

Fig. 906A. Dewey

vantage of this is that the hose lies better on a rack with an arched bottom, as the arch supports the weight of the hose and relieves the folded ends of any pressure. The top of the hose so folded will be level and not concave.

The underwriters do not approve a hose rack with an arch bedplate, but the Hartford Rack is largely specified by architects and owners on account of the advantages above mentioned.

			100	" " " "	8.00

Both the Dewey and the Hartford Racks are packed "knocked down" in individual wooden boxes for convenience. Stock finish is red enamel, baked on. Nos. 15, 16, 25 and 26 will carry heavy rubber lined cotton hose in 50-foot lengths.

Both the Dewey and the Hartford Racks are furnished with pipe clamps or wall brackets. In ordering, state which attachment is desired and if pipe clamps, give the size of the standpipe.

Fig. 909C.  
Styles A, C, D and I  
Swinging

## RYERSON HOSE REELS

Styles A, C, D and I are made with wall brackets or pipe attachment. When ordering to be attached to a standpipe, the size of pipe should be specified.

Style B is a stationary variety of the Ryerson Reel, made to carry rubber lined cotton hose, but it will carry anything that can be wound upon it.

All styles have center braces of wood on which the hose rests. This prevents rusting. The side castings are well finished in solid black, which presents a pleasing contrast to the red braces.

Ryerson reels are approved and listed by the Associated Factory Mutual Insurance Companies.

## AUTOMATIC EXPANSION RING COUPLINGS

**AUTOMATIC EXPANSION RING COUPLINGS**  
 Instructions for Ordering Automatic Couplings

In ordering Automatic Couplings, always give us:

First: The exact outside diameter of the hose. It is always better to send sample of the hose, as different makes of hose vary a great deal, and a made-up sample varies often from the hose when received to be coupled.

Second: We must have sample thread by which to cut thread on the couplings; a description of the thread will not do unless it is iron pipe thread or hose pipe thread, in which case we will make the couplings up, and guarantee them to be iron pipe or hose pipe thread; but we cannot take back couplings which are made up on mere descriptions of the thread, as we guarantee the threads to fit only when sample thread is given us with the order.

Size .....	inches	1	1½	1½	2	2½	3	3½	4	4½
Price per pair .....		\$1.35	\$1.70	\$1.85	\$2.20	\$2.85	\$6.00	\$10.00	\$12.00	\$15.00

We make the Underwriter Couplings, automatic style in conformity with the specifications of the Underwriters as to form, weight and mixture of metal. The Underwriter Coupling is made in red brass and is superior to the ordinary automatic couplings in quality of material, weight and finish. Our coupling conforms strictly to the Underwriters' specifications.

Size .....	inches	1½	2½	2½
Price per pair .....		\$3.00	\$4.00	\$5.00

**AUTOMATIC COUPLING EXPANDERS**

These expanders are necessary in attaching Automatic, Marine Perfection and similar couplings to hose. The wearing parts are substantially made and work smoothly. Made in all sizes from ½ to 6 inches. Prices on application.

In ordering automatic couplings, always give us: the exact outside diameter of the hose. It is always better to send sample of the hose, as different makes of hose vary a great deal, and a made-up sample varies often from the hose when received to be coupled.

**SUCTION HOSE NIPPLES**

Rough and poorly fitting nipples will greatly decrease the life of any piece of suction hose and may entirely ruin it. The expenditure of a little care on this detail is well repaid.

Those we furnish are of good length, smooth on the surface, grooved to insure strong and tight joints, and have all edges and grooves rounded off.

We furnish nipples for all sizes of suction hose, wiring them in as a rule.

## Fig. 171 NEW YORK PATTERN SOFT SEAT HOSE VALVE

Designed to meet the demand for a high pressure hose valve. Made of the best steam metal, has a full waterway, a renewable soft rubber disc of ample weight and is of attractive design.

Intended for use in connection with standpipes for interior fire protection, especially on wet systems where the pressure is on the valve at all times.

This valve is made in accordance with U. S. Government specifications for post office buildings and is acceptable to the Supervising Architect at Washington.

## CHEMICAL ENGINES AND EXTINGUISHERS

### CHEMICAL ENGINES

Fig. 909A. 40 gallons Capacity

### HAND FIRE PUMP BUCKETS

This type of pump is carried on every hook and ladder truck in the Chicago Fire Department and has demonstrated for itself that it is very efficient for putting out small fires.

It is especially adapted for use in factories, public buildings and schools.

It is simple in construction, easy to operate, strong and well made. The body is of heavy galvanized iron finished in red enamel.

The pump is of brass, 21 inch stroke and double acting, throwing a continuous stream about 40 feet. As the pump is used with plain water it can always be refilled at the nearest water supply.

Capacity, 5 gallons, list each.....\$7.00

Fig. 909D

For manufacturing plants, railroads, warehouses, public buildings and private property in general. Operate by the generation of carbonic acid gas in large quantities under high pressures. Engines have heavy drawn steel cylinders with tops securely riveted, seams being backed up on the inside with a heavy ring of noncorrosive solder. Attachments, such as collar and outlet, are flanged on the inside and riveted, being also heavily backed up with noncorrosive metal. Wheels have iron hubs with brass hub caps, sixteen spokes, and round edge steel tires.

The No. 20 outfit can be wheeled through crowded aisles and narrow doorways, and can be successfully operated from 40 to 60 feet from the nozzle.

List price, No. 20 Outfit, 20 gal. capacity, \$85.00

List price, No. 7 Outfit, 40 gal. capacity, 185.00

### PEERLESS FIRE EXTINGUISHERS

(Approved by the National Board of Underwriters).

Built of very heavy cold rolled copper. Differs from other extinguishers in that the method of attaching the dome to the body of the shell actually makes that joint the strongest part of the machine. A cast brass bottle-holder is used. Hose is attached to the extinguisher by a swivel ground joint and it is utterly impossible to detach this hose without a wrench.

Price, each ..... \$18.00

Fig. 909C

### PYRENE

This is a hand extinguisher for home, factory and automobile use, so well known that it needs no detailed description. There is within the container a manually operated double-acting pump which throws a continuous stream. It is absolutely reliable and dependable, always ready for instant use. There is no time lost at the start of a fire in pumping up air, or opening different valves, etc. Its use on an automobile will reduce insurance premiums 15% each year. Over a million in use. Each

## HOSE COUPLINGS

### THE JOY AUTOMATIC AIR HOSE COUPLER

Fig. 0258  
(Male Half for Hose)

Fig. 0259  
(Female Half with Iron Pipe Thread)

Positively will not leak air. Equally successful for heavy or light work. The simplest and most reliable Air Hose Coupling on the market.

Made in two parts, which may through but a turn of the wrist become locked, and as instantly unlocked by a reverse action; all mechanism is enclosed; internally there is but one part to become worn—the rubber washers, which may be easily replaced by removing two lock nuts.

The locking is a simple operation whereby a quarter turn against a cam-sleeve, after passing the lug through the groove (as shown in the illustration) to notch at extreme end, expands a rubber gasket to fill a cylindrical wall, as in a stuffing box.

Any Joy Coupler can be furnished interchangeable with the size next larger or smaller.

Orders should state plainly the size of the coupling wanted; also the internal diameter of hose or size pipe thread with which each half connects. Both the male and female halves can be furnished with either hose end or iron pipe end.

The Rubberhide Way

## RUBBERHIDE BOOTS

The Ordinary Way

Leather soled rubber boots cost money. A low grade boot costs less, does not wear long, and cannot be made watertight. It is not what you pay but what you get out of a boot that counts.

Rubberhide boots are of the best known construction. The uppers are the best that can be put into such a boot. Made by people who know the rubber game from start to finish. The leather is cut from bends only; no bellies, shoulders or heads; high priced and has the wear. There is an added heel protection that is easily worth a dollar, and which no other boot of this kind has.

Rubberhide boots can be resoled. This feature alone is one that no manufacturer can boast—economically. Nearly all Rubberhide boots are resoled wherever used; it adds one third to their value. They are light, which means much in a day's work, and are much more comfortable than the average boot of this kind.

Note the illustrations at the top of the page. They show the cross section views of the Rubberhide and the average nailed leather soled rubber boot. The advantages of the Rubberhide are at once apparent. The most important feature is that the Rubberhide is absolutely watertight. Then note the different layers of rubber and leather that add to the protection rendered against water, mud, concrete or moisture of any kind.

Now look at the other cut. It is typical of all nailed boots. It is practically nothing more than a rubber boot with a leather insole and the outer sole nailed on, or a cheap sole nailed through the insole and an outer sole nailed to this. The place where leaks come is between the upper and first sole—which is nailed on, not sewed.

Compare these two demonstrations closely. They show exactly how you make money by buying Rubberhide boots in preference to any other boot made. A boot fifty cents cheaper than Rubberhides is a mighty high priced boot when you figure that you must buy one-third more boots to get the same amount of service. No matter what you pay for boots, Rubberhides will save you money.

The "EZO" Shoe is made with the same construction as the Rubberhide Boot in every respect. It is used principally in creameries, breweries and places where a rubber boot is not necessary or desired. It is light in weight, flexible, and does not tire the feet like an ordinary rubber boot. The leather insole prevents this. Furnished plain or hobnailed.

## PRICES

Per pair

Short, or Knee Boots..	\$7.50
Storm King, or Thigh.	8.25
Hip .....	8.75
Shoes, 7 inch.....	6.75
Shoes, 10 inch.....	7.00

The Isthmian Canal Commission used upwards of 2,200 pairs of Rubberhides. It proves most conclusively the superiority of this boot over all others.

## RUBBER BOOTS

## SPORTING BOOTS

Sporting boots are carried in two weights: light and heavy. The light weight are more popular, and are always sent unless otherwise specified.

Men's sporting gum..... \$6.00

We also carry a complete stock of second grade boots in the knee, sporting and hip boots, known as the Connecticut grade.

Connecticut Hip Boots. Price per pair.....\$5.75

Connecticut Knee Boots. Price per pair..... 4 25

## "BULLSEYE" PRESSURE CURED BOOTS

This boot is the Original Pressure Cured boot and made under the original patents covering this process.

"Bullseye" boots are cured under great pressure in open steam, which process toughens the rubber and welds every part together so there are no loose spots and no seams which can come apart. Every part is cemented and lapped, making a double thickness where the different parts overlap each other.

They are made with a gray sole and gray foxing strip which extends over the edge of the boots, adding strength to the uppers and protection against rocks and snags. The sole extends under the heel which makes the shank solid and gives extra wear where it is most needed and as they are all made over aluminum lasts uniformity of sizes and a correct fit are assured.

"Bullseye" Boots are guaranteed by the manufacturers to give greater service and greater satisfaction to the wearer than any rubber boot on the market.

Price hip style .....\$6.50

Price knee style ..... 4.75

# SAWYER'S SLICKERS

## WHY SAWYER SLICKERS AND WATERPROOF CLOTHING ARE SUPERIOR

The best reason why it is to your interest to buy Sawyer Slickers and Waterproof Garments is because they are best.

Sawyer goods are made under the direct supervision of the owners of the business—every detail carefully watched, possible improvements searched out, quality kept up, rigid inspection maintained.

Highest grade materials are used, especially those most vital—the oils.  
**AND MARK THIS—**

Every garment is coated five times, which is one more than in any other make.

And every coat is thoroughly seasoned before the next is applied.

Such carefulness has made Sawyer's lead for quality, and such final extra betterments give the satisfaction which all users of oiled clothing demand.

The next two pages show some of the Sawyer styles.

## EXCELSIOR BRAND CLOTHING

Made from fine heavy sheetings especially woven for this brand from selected yarns and according to directions of the manufacturers as to count and weight. All seams are double-stitched and those liable to severe strain are treble-stitched differing thereby from any other make or brand of goods.

They are treated with a special compound that renders them thoroughly waterproof, imparting a soft, smooth finish that does not crack, peel or stick. Coats are made with soft woolen collars, and all garments are furnished with Sawyer's double fastened brass buttons that will not corrode, rust or pull off.

Every garment guaranteed.

## LIGHT-HOUSE BRAND CLOTHING

Made double throughout from sheetings carefully selected.

They are double-stitched and thoroughly waterproof with a special compounds; also furnished with double fastened brass buttons.

Second only to Excelsior Brand in quality.

## EXCELSIOR OIL DRESSING

One of the many advantages this line of waterproof goods possesses over any other is that when the surface becomes impaired through excessive wear it can easily be renewed by application of one or more coatings of Excelsior Oil Dressing. This can be applied with brush or sponge, and will dry in ten or twelve hours. A badly impaired surface requires two or three coatings; the garment should be allowed to dry between each application. By applying dressing to such spots as show wear, a garment may be preserved for years.

This dressing is put up in pint cans for black, yellow or brown clothing.

Price, per pint .....\$0.50

## SAWYER'S EXCELSIOR BRAND SLICKERS

Fig. 22 Slicker

Fig. 201 Motor Coat

Fig. 363 Nobby Coat

## EXCELSIOR BRAND SLICKERS

No. 22.

Made double throughout, trimmed with the improved "overlap" collar, faced with corduroy; storm lap; two "no-rip" pockets, inner sleeves and brass buttons that will not corrode or rust.

The "over-lap" collar is a new feature of real merit to this garment. It adds to its outward appearance, as well as gives absolute protection from the hardest storm, whether walking or riding.

Made in Yellow, Black and Olive.

Prices and sizes on following pages.

## EXCELSIOR BRAND MOTOR COATS

No. 201—Black, Brown

Double throughout, trimmed with velvet lined 6 inch collar and throat tab, reinforced inner sleeves.

Two No-Rip pockets, long outside storm lap, which absolutely prevents water running into front. Brass buckles attached by brass rivets through leather stays.

No. 342—The long storm lap, fitted with brass buckles, prevents all water running in at front of coat, simple but positively effective, and has stood the test of service for twenty-five years. Waterproofed in Khaki and Olive colors.

Prices and sizes on following pages.

## EXCELSIOR BRAND NOBBY COAT

No. 363—Dull Black

The Nobby is made of strong but light weight material and waterproofed in a dull black finish, renders this coat distinctive in the line of oiled garments. Lined shoulders and sleeves, rolling collar, with velvet faced collar band, two No-Rip pockets and inside interlocking storm laps in addition to its natty appearance and features that appeal to many desiring a lightweight serviceable waterproof coat.

Prices and sizes on following pages.

## SAWYER SLICKER SUITS—OILED CLOTHING SIZES

## EXCELSIOR BRAND SUITS

Excelsior Brand Jackets are made double throughout. The front opening is protected by a storm lap. Brass buttons for fastening.

Excelsior Brand Apron Pants are similar in style to the ordinary overall. Made double throughout. The side openings are furnished with brass buttons.

Excelsior Jackets and Apron Pants are made in yellow, black, brown and olive.

Excelsior Brand String Pants are made with draw string at waist. Yellow and black.

The combination makes a very serviceable Oil Suit for fishermen, teamsters, miners and farmers and all men who work out-of-doors.

Prices on Following Pages.

MEN'S SUFFOLK

Fig. 918 Firemen's

Heavy double texture waterproof garment made of either tan covert outside with white sheeting lining; interlined with a fine coating of rubber. Storm fly front, ball and socket or snap fasteners, two outside pockets with flap. Coat is 52 inches long, has band collar fitting snug at neck. An excellent garment, constructed for hard service and general uses.

#### MEN'S WESTERN—Not Illustrated

This is a good quality of men's cloth surface rubber lined medium weight grey coat. Single breasted slot and buckle fasteners; corduroy tip collar; ventilated under arms; two outside pockets with flap; riveted collar, pockets and tail vent. This is a vulcanized coat, built for service, adapted for many purposes. It makes an excellent driving, riding or walking coat.

#### MEN'S RED STRIPE

This garment is made on a high quality of rubber coating, run on very fine fancy striped lining. It is made with plain band collar, slot and buckle fasteners, two outside pockets, with flap, back vent in skirt, and has double outside back. All seams are cemented and strapped, and we can especially recommend this garment.

#### MEN'S D. C. FIRE

This is made on a new quality of jean, coated on both sides with an extra fine quality of pure gum para rubber. It has snap and ring fasteners, storm fly front, strap at neck and sleeves. Seams sewed, cemented and strapped. 49 inches long. A high class coat in every way.

#### MEN'S BATES—Not Illustrated

Single breasted, buttoning through, square shoulders, vertical pockets, tab on sleeves, convertible collar, 50 inches long. Garment is sewed, cemented and strapped throughout, tail vent reinforced with wide facings. Cemented pockets, ventilated under the arms. A splendid model cut on up to date lines.

Cloth 4347/324—Fine black and white mixture, tweed effect, with plaid lining to match.

Cloth 4992/397 (velvet collar)—Fine dark oxford tweed with plaid lining to match.

Cloth 5523/90 (velvet collar)—Fine grade woolen mixture, oxford shade, knickerbocker lining, with plaid lining to match.

Cloth 5322/205—Fine high grade wool mixture, dark oxford tweed pattern with plaid lining to match.

In addition to the line of rubber coats listed above we carry in stock, a large line of models in rubberized and waterproofed cloth. These coats represent the latest models and fabrics and are cut on the best lines—in fact they are dress coats in every way and can be worn as an ordinary overcoat as well as a raincoat.

We will mail, upon request, sample swatches of the different patterns from which these coats are made.

## COTTON WASTE

**POLISHING WHITE**

This Waste is made of nothing but pure mule spun quill cop thread, recognized as the finest available material for Waste, that will stand the test of polishing high grade furniture with absolute satisfaction. While it will also perform duties of other Waste, its long length and soft texture make it specially adaptable for polishing furniture, automobile bodies and similar surfaces. 100 lb. bales only.

**EXTRA MACHINE COP**

The best general commercial grade of White Waste obtainable. Made from single spun soft long yarn, and carrying absorbent and cleaning qualities that cannot be excelled. 100 lb. bales only.

**NUMBER ONE WHITE**

A strict No. 1 White Waste, carrying no rags or hard material to detract from its absorbing and cleaning properties, and differing only from Extra Machine Cop in class of thread. The threads used are of full absorbent quality though produced in different manner from that of the Cop, and the No. 1 White itself is a long soft absorbing Waste. For straight general use the No. 1 is a real No. 1 that cannot be discounted. Put up in 10 lb. packages, 10 to a bale, also in 25, 50, 100 and 500 lb. bales.

**A—White**

In marked contrast to some grades that are so sold, this is a No. 1 grade in every respect, as it carries no rag, nor harsh material to detract from its properties. For any ordinary purpose, including garage work, this grade will give absolute satisfaction where a long absorbent waste is wanted. In buying this grade you are securing a Waste that exceeds in quality many other brands of the so-called No. 1. 50 and 100 lb. bales.

**B—White**

Our "B" White Waste is a cheaper grade than the "A" and is made to meet conditions where a cheap white waste of this kind will answer the requirements. It contains a good portion of cotton threads, and has a good absorbing quality. 100 lb. bales.

**SEMI-COLORED**

Best grade of this class of Waste on the market, carrying all the essential properties of extra Machine Cop and No. 1 White combined, though containing a fair percentage of colored thread. The colored threads used, however, bear same relation to quality in their colored class as the Extra Machine Cop and No. 1 bear in the White. The colored threads make possible cheaper price. 100 lb. bales only.

**FANCY COLORED**

Occupying the same relative position among colored Wastes as Extra Machine Cop and No. 1 White do among different grades of White Waste, Fancy Colored is only made of straight colored thread. 100 lb. bales only.

**A—COLORED**

Surpassing all grades of colored Waste at or near the price. Mixed with no material that will detract from its proper functions, for general shop use where pure cotton product is a necessity, it is splendid value. 50 and 100 lb. bales.

**B—COLORED**

For rougher usage, where price is an object, this grade stands alone. Necessarily mixed to obtain the price, it still carries those virtues of length and absorption that make it particularly desirable and a grade to be sought for. 100 lb. bales only.

We also carry on hand at all times a complete stock of wiping cloths and sanitary rags, both white and colored. Furnished in 50, 100 and 500 lb. bales.

**WOOL WASTE**

Wool Waste, both in machine and skein form. Carried in stock in 100 lb. bales. Especially adapted for Journal Box Packing.

# Cotton Duck

---

**I**N this department we carry a large and varied stock of cotton fabrics used by Tent and Awning Makers, Car Builders, Trunk Makers, Contractors, Sail Makers, Ship Builders, Railroads, Camp Furniture manufacturers, Wagon Builders, Roofers, Book Binders, etc.

In addition to Standard Ounce Ducks, Sail Ducks, Wide Ducks, Narrow and Heavy Naught Ducks, we are offering, under our famed "Lakeside" brand, a wonderful assortment of woven Awning Stripes, also Textol and Painted Stripes, and other special materials for this purpose in Khakis and imported solid color design.

In Waterproof Ducks we are selling agents for Tan Textol, a strong, flexible and highly satisfactory fabric. We also carry brown and white Paraffine Ducks, Black Oiled Ducks, "Five Star" Waterproof Ducks, the latter replacing to a larger extent the imported Belgian Flax Cloths which are not now on the market.

In Roofing Canvas we are western selling agents for the "Con-Ser-Tex" prepared canvas roofing, a waterproof and mildew-proof product, especially adapted for porch roofs and floors, or other flat surfaces where an absolutely watertight, durable and slightly covering is essential.

In Dyed Ducks and Drills we offer a large assortment of commercial dyed fabrics in slate, tan and brown; also genuine mineral dyed Khakis and fast colors in solid greens, blues, yellows, etc., for decorating, curtain and book binders' use.

In this same department are handled various closely related lines, such as Cotton Rope, Awning Braid, Threads, Fringes, Webbing, Tapes, Awning Hardware, Cotton Seine Twine, etc.

In short, no dependable canvas fabric or accessory known to the industry is omitted from our stock, and we are constantly adding new lines to take care of the increasing demands of the trade.

**GEO. B. CARPENTER & CO.**

## COTTON DUCK

ALL STANDARD BRANDS

Our stock of Cotton Duck is without exception the largest and most varied in the country. We are agents for several of the standard brands, and can supply all widths and weights.

## STANDARD WIDE DUCK

In rolls of about 100 yards each

### FANCY STRIPES

We carry a very complete assortment of Fancy Awning Stripes and we are constantly getting up novelties in these goods.

We issue, every spring, a sample book, showing over 100 patterns of stripes, which we send to the trade without charge.

### For All Roofing Purposes. Particularly Adapted for Porch Roofs and Piazza Floors

Con-Ser-Tex is a specially woven cotton fabric, scientifically treated by chemical processes to preserve the fibre from mildew germs. The canvas is so impregnated that paint will not come in direct contact with the cotton fibre; consequently the detrimental action of oil is eliminated.

No oils or injurious pigments are used to fill the goods. Both sides are finished with a "tooth" to which paint readily adheres, but our treatment keeps paint from destroying the fibre.

### PER LINEAL YARD

	E	G	I
Widths			
30 inch .....	\$1.06	\$1.18	\$1.44
36 inch .....	1.28	1.42	1.62

Other widths processed to order

### DIRECTIONS

Paint the wood roof or deck with one heavy coat of lead in oil paint, and lay the brown side down, while the paint is wet. This is not absolutely essential, but will give better results, as the brown side is finished in surplus and combines ingredients that form a perfect cement when fully oxidized.

Laps of canvas to be 1½ inch. Galvanized or copper tacks to be ¾ inch apart, to be tacked while being slightly stretched.

After it has been laid and set, paint the tanned or primed side with a light coat of good lead in oil paint; add a second and heavier coat after the first is thoroughly dry.

Con-Ser-Tex is very easily laid and does not require much paint, being already primed. The chemicals used contain no oils or injurious pigments.

Owing to the special construction of the fabric and the advantages of the processing, Con-Ser-Tex presents a neater appearance than other roofing.

Fig. 295

These Bolts and Rivets  
also fit all the Bracket  
Hinges illustrated on the  
following page.

Galvanized	Nos. 21	22
Black	Nos. 021	022
Length of Arm	1	2 Inches
Length of Plate	4	5 Inches

These Hinges are concave on the bottom and  
fit a flat or round surface.

Nos. 1, 2, 3, 4 and 5 Eye Ends fit these Hinges.

## HOW THEY WORK

These Hinges can be used as a Single Hinge  
or as a Double Arm Hinge. We furnish them  
with  $\frac{3}{8}$  Rivets or  $\frac{3}{8}$  Bolts, but we always send  
them with Rivets unless orders specify with  
Bolts.

As a Single Hinge

As a Double Hinge

## Carpenter's Patent Combination

Head Rod and Pulley Holder

For Window Awnings

PATENTED

Fig. 431

This fixture is made with a retaining lug above and two hooks below, upon which the pulleys are hung. The retaining lug turns freely on the base of the fixture, forming a circular space large enough for the head rod. When the head rod is in place the hooks are closed so that the pulleys cannot come off until the head rod is removed.

## HEAD ROD HOLDERS

Galvanized

No. 1, WITH 2 HOOKS FOR PULLEYS

Fig. 432

For window awnings with  $\frac{3}{8}$ -inch iron head rod.

The screws are made of brass so they can't rust in the holes, they are also upset on the end so they can't be taken out from the clamp and lost.

Nos. 2 AND 3 WITH 3 HOOKS FOR PULLEYS

No. 2. For double and triple windows, also small porch awnings using  $\frac{3}{8}$ -inch iron head rods.

No. 3 is for large porch and store awnings using  $\frac{1}{2}$ -inch iron head rods.

Also larger motors for all purposes.

Prices on application.

Fig. 641

## COLUMBIA GALVANIZED IRON AWNING ROLLERS

Fig. 377A

Are constructed for heavy work. They are exceedingly well made and contain an unusually powerful spring and heavy mechanism.

The Columbia method of attaching awning to roller is simple and sure, and gives absolute satisfaction.

A wire runs the entire length of the barrel and is soldered to the roller in several places. To the unattached portions of this wire the awning can be quickly sewed. This fastening is secure against hard usage.

An awning attached in this manner is more neatly finished than in any other way.

## CURTAINS AND PORCH ENCLOSURES

Fig. 9

## SPRING ROLLER CURTAINS AND AWNINGS

## For Sleeping Porches

The sleeping porch, while comparatively a new idea, has become almost a necessity. Open air sleeping has been recommended and adopted by many prominent medical authorities. The slogan today is not so much how to cure disease but how to prevent it. Sleeping out-of-doors is beneficial to the strong and healthy as well as to the invalid. A sleeping porch properly equipped has curtains mounted on G. B. C. galvanized spring rollers set at the bottom of the opening and raised by means of ropes and pulleys, as shown above. The curtains can be raised part way up, giving proper seclusion, and at the same time affording perfect ventilation. In time of storm, the curtains can be raised the entire way and the sides are equipped with fasteners which, when clasped, prevent the rain from beating in at the ends of the porch. The modern sleeping porch has its rugs, furniture, etc., that cannot be removed to the inside of the room in a moment's notice. Our sleeping porch arrangement, with the spring roller curtains on the inside, fastened at the bottom of the opening, operating upwards, or with the awning on the outside, makes the sleeping porch the acme of perfection and comfort.

## SPRING ROLLER CURTAINS

## For Sun Porch Shades

Fig. 10

These are mounted on Carpenter's specially constructed galvanized spring rollers. The spring roller is attached at the top of opening and is raised and lowered in the same manner as an ordinary window shade, as shown in Fig. 10. Fasteners are set at intervals down each side of curtain to hold the curtain in place in time of stormy weather.

Prices on Application

## REGULAR ROLLER ROPE CURTAINS

Fig. 11

Our regular rope curtains are not only a practical and serviceable means of enclosing porches for sleeping purposes, but sunshades as well. They can be raised by means of ropes and pulleys to any desired height as shown in cut. They are simple to install. For pulleys and rope arrangement, see Fig. 11. Prices on application.

Cut shows position of "Spring Shade," when rolled up. The middle sash makes it practically invisible from the inside.

## THE CARPENTER "Spring Shades"

Smith Patent—Patented August 24,  
1909.

The Only Practical, Up-to-Date Roller  
Window Awning for Residences,  
Office Buildings, Factories, etc.

"It works from the inside."

Cut showing "Spring Shade" extended.

The "Spring Shade" is built on a simple yet unique principle. It consists merely of a one-piece canvas or stripe cover which rolls up from its center on a specially constructed spring roller. The roller is suspended from galvanized brackets at the center of the window. A pocket in the top of the upper canvas conceals a wood batten, to the center of which is attached the operating cord. The cord is led through a small jam pulley at the top of the window. When the cord is pulled the spring roller is released and permits the two parts of canvas to unroll from the roller, the upper part moving up flat against the upper sash, the lower part, which carries the hinged extension arms, falling downward and outward to any position desired, the jam pulley holding the cord whenever it is released.

The adjustable feature of the "Spring Shade" is of the utmost value in any office building or factory where light is an essential consideration, as it can be opened part way in the morning, and as the position of the sun's rays change during the day, the position of the awning can be altered to meet the varying conditions. The "Spring Shade" will also make a strong appeal to everyone who has struggled with the heretofore impossible combination of window screens and awnings. By making a small groove in the screen frame, the operating cord can be let down between the screen and the window sash, and the awning operated easily and quickly without the necessity of raising the screens. It is a very simple matter to carry this still further and lead the operating cord through a small hole at the top of the window sash directly into the room, thus making the operation of the "Spring Shade" the perfection of ease and convenience as compared to the awkward, and often difficult, operation of the old style awning.

Not the least surprising feature of the "Spring Shade" is the amount of sun protection it affords. It may seem to the casual observer that an awning without side wings, like the "Spring Shade," cannot give as much protection as the old style awning with side wings. This is a wrong impression, however, as in actual shade area the "Spring Shade" exceeds the old style awning with wings. When fully extended the "Spring Shade" drops to a much lower point than is practical in the old style awning, thus more than making up for the small amount of sunlight admitted during certain hours at the side. The sunlight admitted at the side consists only of oblique rays, lasting for only a short period each day. The sunlight that annoys is the direct glare coming straight through the window—against this direct glare, the Carpenter "Spring Shade" gives more protection than the old style awning.

The "Spring Shade" is so extremely simple in construction that after the original installation it can be taken down and rehung by any janitor or house man. In taking down, all that is necessary is to allow the cloth to roll up on the roller—pull the operating cord out of the pulley—lift the roller from its brackets and the extension arms from their hinges, and the work is done without the necessity of a single tool. The few simple fixtures which are used in connection with the "Spring Shade" are fastened permanently to the window and there is never any necessity for marring the window frame with new screw or nail holes. We guarantee the spring roller and all metal parts for two years.

There are no slide rods or slides to stick and jam. There are no braces to be released before awning can be operated, with the attendant nuisance of raising window and screen. There is nothing to rattle or jar loose.

Send for descriptive booklet.

For Prices See Next Page.

For any size lying between the above divisions take the list of the next higher size.

## A WORD REGARDING THE SIZES OF TENTS

Attention is called to the fact that our list prices on Tents are based on the actual yardage of cloth in each Tent, which of course is the only fair way to figure list price. When this list was decided on by the manufacturers interested, the sizes were in some instances incorrectly stated, evidently through an oversight.

The following sizes of Tents, either in width or length, will be found to be exactly as stated: 7, 9½, 14, 16, 30 and 35 feet.

The following sizes will differ from the list, for the reason that the goods will not cut profitably to the exact dimensions specified.

Tents listed as	9 feet	will measure	9½ ft.	Tents listed as	20 feet	will measure	19¾ ft.
" "	12 "	" "	11½ "	" "	24 "	" "	23 "
" "	18 "	" "	17½ "				

## HINTS ON COTTON DUCK

Cotton Duck, such as is used in the manufacture of Tents, etc., can be divided into three general divisions, based on quality.

### BEST. U. S. ARMY STANDARD DUCK

28½ inches wide, made in the following weights, per lineal yard: 8 oz., 10 oz., 12 oz., and 15 oz. Used for all government purposes, and the cleanest, closest, strongest and most durable Duck possible to construct.

### GOOD. DOUBLE FILLING DUCK

29 inches wide, made in same weights as Army Duck, but not of such good cotton nor so finely woven. This Duck when made as ours is, is well suited for tents and covers where a first-class article at a moderate price is required. Excepting on government work we use more of this grade than any other.

### FAIR. SINGLE FILLING DUCK

29 inches wide, made in 7 oz., 8 oz., 10 oz., 12 oz., per lineal yard. These goods are made of coarser yarns and of poorer cotton than the above grades. They are low priced, and make fairly satisfactory tents and covers where great durability to withstand hard usage is not the first essential. This is the grade on which many department stores quote such very attractive prices, claiming that they are "Standard Army Goods."

A View in One of Our Machine Rooms

Showing force at work on Tents, Awnings, etc. The Machines are of a special type made for our use and are run entirely by power; the operators are kept very busy, however, merely handling the cloth, as these machines have a speed of 2,500 stitches to the minute.

## SPECIAL WALL TENTS

Fig. 515

**KHAKI**

Khaki is the name generally applied to duck, drill and canvas dyed an olive drab or tan color. It is very popular for its sun-glare and heat resistance, and makes an ideal covering for camping purposes.

It is specified by national governments for housing armies both in the field and permanent camps. For this service mineral dyed Khaki is used because it is water repellant.

**TAN-TEXTOL**

For an "All Summer Camp," where an absolutely waterproof and mildewproof tent is desired, we unhesitatingly recommend our Tan-Textol. This is a special processed fabric of tan color which will stand up under all weather conditions and not deteriorate as rapidly as most materials which are subjected to rain, dew or moisture of any kind, or exposed to the sun's rays.

18 x 35	11	5	131.60	149.45	182.90

Note.—The above prices do not include flies. Regular flies for any size Tent will be furnished without poles at one-half the price of the Tent quoted on application. If higher walls than list specifies are wanted, add 5% to list of each additional 6 inches of wall so added.

## WATERPROOF SILKELENE TENTS

In our Waterproof Silkelene Tents we offer the result of years of experimenting with light weight, waterproof fabrics for use in tents for camping purposes. There has been a growing demand for such a covering, and we believe we have the best material on the market to meet the conditions usually found on an outdoor trip.

It combines strength and light weight and is as waterproof a material as can be manufactured. We recommend it as the most desirable tent made.

These tents are all constructed and finished in the very best workmanship, all holes being hand worked, using galvanized steel rings in place of the brass grommets. The ridge is reinforced with a band, and rope is attached to this band by hand. All rope used throughout is of very best cotton. The stove-pipe holes are placed in rear wall unless ordered otherwise. All tents are made with sod cloths 9 inches wide and sewed to bottom of wall. If light weights are put on the sod cloths after tent is put up, they will prevent insects from crawling into the tent. We can furnish these tents with canvas floors. Windows, covered with bobbinet netting, can be placed in tents. One door in each tent. Additional doors can be furnished if desired. Protection against flies, mosquitoes, etc., can be secured by using bobbinet netting which can be sewed across the entire front when ordered.

We always send tents with rope ridge and pins. If poles are wanted, they should be specified. All tents are packed in waterproof bag.

## WALL TENTS

18-8x35	11	5	89.20	105.95	111.55	131.60	149.45	182.90

We recommend and always insert an Asbestos Stone Pipe Ring—which is noiseless, and can be rolled up without injury—in the rear end wall. Extra for same \$3.00.

All Tents are made with one door as illustrated. For an extra door, extra, \$1.50.

Sod Cloths 9 inches wide are attached to bottom of wall of Tents to keep out insects, at 6 cents per lineal foot.

If Rope Ridge is wanted—without poles—same will be furnished without an additional charge.

SEE INDEX FOR SILKOLINE WALL TENTS

## LARGE WALL TENTS ROPED

Complete With Poles, Stakes and Guys

Extra hand roped and finished. Complete with center and wall poles, iron banded stakes and two tackle blocks for stretching the ridge.

These Tents are used mainly by contractors to house a large number of men, where a temporary shelter is necessary. Made in the best possible manner, strongly roped by hand on ridge, eaves, gables and across the roof.

## MACHINE SEWED

Flies without poles will be furnished at one-half the prices for any given size Tent. If higher walls than list specifies are wanted, add 5 per cent to list for each foot or fractional part of a foot of wall so added.

Prices are for Tents made in best manner, properly roped on ridges, gables, and every 9 feet of top. Additional roping will be charged for at 7 cents per foot of roping.

## "A" OR WEDGE TENTS

Complete with Poles, Stakes, etc., or with "Rope Ridge" (as per cut)

These Tents make a good addition to a boating or fishing outfit, and without poles (furnished with rope ridge, if desired, as in cut) can be packed in a very small space. They are also used by hunters, prospectors and others who wish to reduce the load carried to a minimum.

## CAMPING TENTS

With Portable Walls and Partitions. Complete With Poles, Stakes, Guys and Two Partitions.

Copyright 1899  
Geo. B. Carpenter & Co.

## MACHINE SEWED

For "Camping" this style of Tent will be found very desirable. By raising the end walls, awnings can be formed providing a space which can be used for cooking. Side walls are detachable at corners, so they can be rolled up and tied to the eaves. Two partitions are furnished, which can be quickly changed to lessen or increase the size of rooms. If tents with higher walls than listed are required, add 5 per cent to list for each foot or fractional part of a foot of wall so added.

Flies will be furnished without poles at two-thirds the price of tent.

If any hand roping is wanted, add 7c per lineal foot net.

If 9-inch sod cloth is wanted around bottom of tent, there will be an additional charge of 3c per lineal foot net.

If walls are wanted of one grade lighter duck than top, deduct 3%.

Partitions are made of 8-oz. duck, 6c per square foot, and subject to same discount as tents.

Size		Height of Center Poles	Height of Wall	10 oz. Double Filling	12 oz. Double Filling	13 oz. Army

12x21	11	6	63.13	57.82	67.56	77.29	76.70	86.14	102.96
14x21	12	6	69.55	63.70	74.43	85.15	84.50	94.90	113.43
14x23	12	6	76.24	69.83	81.59	93.33	92.62	104.03	124.33
16x23	13	6	84.00	76.93	89.88	102.84	102.05	114.61	136.98
16x26	13	6	90.42	82.81	96.75	110.70	109.85	123.37	147.45
16x28	13	6	96.84	88.69	103.62	118.55	117.65	132.13	157.92

These tents are hand roped on the rim and reinforced on hips with webbing; double guy ropes on corner.

For 9 inch sod cloth, around bottom of tent, add 2c per lineal foot net.

If higher walls are wanted, add 10% to list for each foot.

Partitions are made of 8-oz. duck at 6c per square foot, subject to same discount as tents.

Flies will be furnished without poles at two-thirds the price of tent.

For family camping tents the above will be found very useful. The middle section of the wall on either side can be extended like an awning as shown in cut, allowing a free circulation of air.

## SQUARE HIP ROOF TENTS

Complete with Poles, Stakes, Guys, etc.

These Tents are made in best manner, properly roped where strength is required. Add 10 per cent for each additional foot or fractional part of a foot of wall, if higher walls than are listed are required. We can furnish with regular door if desired.

They are hand roped on rim and banded on hips up to 16x16. Larger sizes are fully hand roped every three cloths or seven feet.

If walls are wanted one grade lighter duck than top, deduct 7 per cent.

Flies will be furnished without poles at two-thirds the price of the tent.

If 9 inch sod cloth is wanted around bottom of tent, add 2c per lineal foot net.

## BEACH TENT

Complete with Poles, Guy Ropes and Pins

Those desiring Tents for bathing and picnic parties, or outdoor games, will find the one illustrated peculiarly adapted to their requirements. It rolls up snugly, and the center pole being spliced makes it very convenient to carry. The feature of this Tent is the ease and quickness with which it can be put up and taken down. We make these of fancy colored striped duck.

10x10 feet, pole 9 feet

12x12 feet, pole 9 feet

Price on Application

## PHOTOGRAPHERS' TENTS

Complete with Poles, Stakes, Guys and Keys

## MACHINE SEWED

The Photographer's Tents are used for the purpose the name implies. They are fitted with single or double skylight openings, extending close to the eave of the tents or down the wall, and furnished with flap for a covering when not in use. We make dark rooms, when desired, of black duck, lined with either red or yellow material, making a perfectly light-proof compartment for developing, etc.

If higher walls are wanted than list specifies, add 10% for each additional foot. Dark room size 6x6, \$20.72. Dark rooms are made of 8-oz. blue or black duck, and lined with red or yellow drill. Dark rooms size 4½x4½, \$16.28. These rooms are fitted with poles. Door laps 29 inches. For side sky-light, add \$2.00 net extra. Any hand roping on tents, add 7c per lineal foot.

## THE LA POINTE ADJUSTABLE WINDOW TENT

Fig. 519A

The La Pointe Adjustable Window Tent is unique in its construction, being a departure from all previous attempts in the building of window tents, and open air sleeping rooms. It is intended to, and does permit the user to have the benefit of fresh air, at the same time keeping the body warm while sleeping in his or her bedroom. It can be used either in connection with a bed or a cot as desired.

It consists of an adjustable window frame, the center part screened, and both sides, which adjust to fit window, covered with a special closely woven duck.

It will fit any window varying from 2 feet 10 inches to 4 feet 9 inches wide. It is easily and quickly adjusted. Any desired size to order at special price.

This illustration shows tent used in connection with a bed. It has a transparent window 10 inches square permitting occupant to see into the room.

The opening is fitted with a tape which enables the user to fasten it snugly around the neck.

The pillow can be put in tent or left on bed as desired.

Dimensions of tent are 38 inches by 28 inches by 28 inches in height.

Fig. 519B

This illustration shows exterior with awning. The awning can be attached before tent is placed in window and is easily and quickly adjusted or removed.

The awning not only protects occupant from rain and snow, but acts as a wind-break as well.

Fig. 519C

This illustration shows exterior view, screen center, adjustable duck covered sides without awning.

Tent when closed makes a package 34 inches by 30 inches by 2 inches thick. It is packed in a neat canvas bag.

Price complete, khaki duck.....each \$15.00

## THE LA POINTE PORTABLE HOUSE TENT

Fig. 517

The La Pointe Portable House Tent is in reality a handsome cottage complete with door, windows, floor and screens. The top is double and made of heavy serviceable canvas. The fly, or outer roof, extends 12 inches beyond the edge of the inner roof, with ample air space between the two roofs to insure perfect ventilation and equable temperature. The outer roof has a handsome scalloped valance at the eaves. All sides of the tent have wire netting screens in addition to the canvas side curtains. The side curtains are fastened to the frame with Murphy fasteners on each side, and the canvas is so arranged that it can be pulled up as a curtain, or, if preferred, extended as an awning. This arrangement insures the most perfect ventilation either in summer or winter.

The front awnings and side curtains are operated from within the Tent. The side curtains, if so desired, can also be arranged as awnings, as shown in cut, at a small additional cost.

The frame of the La Pointe Tent is rigidly constructed of well-seasoned pine, carefully fitted and well braced. It is bolted together in a very simple manner and can be easily put up or taken down by anyone following the directions sent with each Tent. To further insure perfect fit of all parts of the frame, as well as the canvas covers, screens, etc., the Tent is completely erected and carefully inspected in our shop before being packed for shipment.

The La Pointe Tent has been very highly endorsed by Dr. J. W. Pettit, of the Ottawa Tent Colony, and other leading physicians. It was exhibited at the Household Show held in Chicago, and very favorably commented on by all who examined it.

As a permanent home for campers or invalids, as a play-house for children, and for many other purposes, it is the most desirable Tent in the market. It carries our guarantee to be insect-proof, water-proof and weatherproof.

An Extra Charge of \$5.00 is Made for Crating Each Tent for Shipment

## THE CARPENTER PORTABLE COTTAGE TENT

Fig. 1  
Curtains Rolled Up.

Fig. 2  
Curtains Extended Outward as Awnings.

The Carpenter Portable Cottage Tent is constructed throughout of the best possible materials in a thoroughly workmanlike manner. The roof is double and is made of heavy serviceable Khaki Duck. The outer roof, or fly, is 6 inches from the inner roof, thus providing an ample air space to insure perfect ventilation. The fly extends 9 inches over front and rear and both sides of tent, and its outer edge is finished with a handsome scalloped valance bound in white braid.

The sides also are made of heavy serviceable Khaki Duck from floor line to a point about 30 inches above; the upper part is entirely enclosed with wire screens and screened door with canvas side curtains on the outside. These curtains are provided with rollers and can be operated from within the tent. They are also fitted with Murphy fasteners to permit of tight closing when desirable. At a small additional cost the curtains can be arranged to extend outward as awnings.

The framework is constructed of well seasoned hard pine, smoothly finished and neatly painted. All parts are carefully fitted, plainly marked and bolted together with thumb screws in a very simple manner. The entire tent can be erected or taken down without the use of any tools whatsoever.

Before being packed for shipment each tent is rigidly inspected and completely erected.

This Tent was designed to be used with a wooden floor. Our prices, however, do not include a wooden floor, as we advise the purchase of this wherever possible from your local mechanic in order to save freight. If desired we can furnish a floor of hard pine at an additional cost of \$0.10 per sq. ft.

Fig. 1 shows Tent with curtains rolled up. Fig. 2 shows Tent with curtains extended outward as awnings. Fig. 3 shows Tent with curtains down and securely fastened.

Packed ready for shipment F. O. B. Chicago.

An extra charge of \$5.00 is made for crating each Tent for shipment.

## CIRCUS CANVASES

These tents are made 60 feet in diameter and larger, of drills and ducks especially manufactured for our trade, with one or more middle pieces to make any desired length. The tops are reinforced with strong extra bands along the ridge, quarter, intermediate sections and rim, and in addition are roped every five feet or two cloths, and also along the ridge, quarter and rim. The tops are laced at each center pole, and each job is furnished complete with center, side and quarter poles, tackles, bail rings, stakes and all necessary guy ropes.

For a moderate extra cost our tents can be waterproofed by our own special process, and we believe the extra expenditure is more than offset in the increased life and usefulness of the tent.

While these big tents are used principally for show purposes, they are also in demand for political gatherings, chautauquas, fairs and other outdoor conventions. We generally carry a few of the smaller stock sizes on hand, but in the main these tents are built to order, to suit the particular requirements of the purchaser.

We shall be pleased to quote and give full specifications on any size tent desired, and our long experience in supplying some of the largest shows in the country is the best recommendation we can offer.

# GEO. B. CARPENTER & CO.

44	21	7	262.67	291.85	328.90	323.25	363.70	399.60

If tents are made to hoist with block and tackle, add 6 per cent to list.

## WITH BALE RING, BLOCK AND TACKLE

Complete with Poles, Stakes, Guys, etc.

Fully hand roped on rim, and every three cloths. Made in two sections which lace together. Walls are detachable.

Diameter feet	Center feet	Height of Wall	250 Drill or 6½ oz.	8 oz. Double Filling	10 oz. Double Filling	8 oz. Army	10 oz. Army
52	23	8	\$414.96	\$455.52	\$507.00	\$499.20	\$555.36
60	25	8	547.96	601.52	669.50	659.20	733.36
70	25	8	678.97	745.33	829.56	816.80	908.69
80	26	8	822.60	903.01	1005.06	989.60	1100.93
90	30	9	1147.79	1259.98	1402.38	1380.80	1536.14

The 52 foot tent has stay bands between rim and peak. Larger tents have quarter band and two stay bands and fitted with quarter poles.

If walls are not wanted, deduct 30 per cent.

If walls are wanted one grade lighter duck than top, deduct 3 per cent.

If higher walls are wanted, add 5 per cent to list for each additional 6 inches.

Tents made of fast color, tan, khaki brown, add 30 per cent.

## IMPROVED CONCESSION TENTS

With or Without Portable Frame

These Tents are especially constructed for fairs, carnivals, amusements parks and for general outdoor use. They can be quickly put up or taken down and are easily packed for shipment. The prices include 7 foot side walls on all sides, made in four pieces with snaps and rings at top. Any one or all of the four walls can be taken off or put on with ease. The walls are fitted with grommets at all corners and with a light cord for lacing. The framework is smoothly finished and neatly painted. The eaves, front and back of tent are fitted with a scalloped bound curtain 14 inches in depth. This curtain can be furnished in any color.

## IMPROVED CONCESSION TENTS

Bally-Ho or Counter Curtain, 3 feet in height, made of fancy red and white or blue and white stripe, together with bound scalloped curtain, fitted with rings at the top, 32c per lineal foot additional.

## STABLE TENTS

The Stable Tents are used by contractors and circusmen, and are complete portable barns. One double section, 12 feet is allowed for six horses facing each other from opposite sides of the tent, the mangers being placed down the center of the tent, between the two rows of horses. Canvas mangers are furnished if desired, at an additional cost, or the common feed bag can be used for grain, the hay being placed on the ground. These Tents are easily set up, being provided with tackle for hauling the lines taut when the poles and canvas are up. An entrance is placed at right of each end, the covering of which forms an awning as shown in sketch.

Fully hand roped on Ridge, Eaves, Gables, across Gable Ends and every three widths or seven feet on the top, also around the bottom of wall.

## Complete with Poles, Iron Banded Stakes, Guy Ropes and Two Tackles

Where walls are wanted one grade lighter than the top of tent, an allowance of 4% will be made.

When higher walls are wanted, add 5% for each additional six inches.

If no walls are wanted, an allowance of 21% will be made.

Other hand roping than stated above, will be charged at 7c per lineal foot net.

## U. S. ARMY SHELTER TENTS

## MACHINE MADE

The Army Shelter, or "Pup" Tent, is one of the most popular styles now in use. It is a great favorite with the Boy Scouts and hikers, who like it because it is light and easily carried. The poles are jointed, which permits them being wrapped up with the pegs and rolled into a small package or roll to sling on the back. Made in two sections, each consisting of one side and half an end, buttoned at the corners.

Five feet, 3 inches long, by 3 feet 6 inches wide, by 3 feet 9 inches center height, 6½ oz. white special yacht twill.....	\$7.00
8 oz. army khaki.....	9.00

Price includes poles, pins and guys.

## U. S. ARMY WALL TENTS

WITH FLY

These Tents are furnished with a fly. They are the regulation Camp Tents for officers.

Complete, with poles, stakes, guys, etc. Dimensions are 9 feet long, 9 feet wide, 8 ½ feet high, with 3 foot 9 inch wall. Tent, 12 oz. army duck, with 8 oz. army duck sod cloth. Fly 10 oz. army duck.

	Machine Sewed Hand Finished	Hand Stitched and Hand Finished
White Army Duck...	\$60.00	\$71.00
Drab Army Duck...	63.00	80.00

Prices include fly. If no fly is wanted, deduct 33 ⅓ per cent from list.

## U. S. ARMY HOSPITAL TENTS

WITH FLY

Copyright 1899  
Geo. B. Carpenter & Co.

Fig. 52SA

These are the regulation Hospital Tents and are also used for regimental headquarters.

Complete with poles, stakes, and guys. Dimensions are: 14 feet long, 14 feet wide, 11 feet high, with  $4\frac{1}{2}$  foot wall. Tent, 12 oz. army duck with 8 oz. army duck sod cloth. Fly, 10 oz. army duck.

	Machine Sewed Hand Finished	Hand Stitched and Hand Finished
White Army Duck.....	\$115.00	\$145.00
Drab Army Duck.....	122.50	150.00

Note.—Prices include fly. If no fly is wanted, deduct  $33\frac{1}{3}$  per cent from list.

## U. S. ARMY CONICAL WALL TENTS

Are the latest style of Army Camp Tents, being an improvement on the Sibley. The advantages of these tents lie mainly in the fact that they will house a greater number of soldiers than any of the other styles.

Complete with pole, tripod, stakes, guys, etc. Dimensions of tent are: 16 feet 5 inches diameter; 10 feet high; 3 foot wall. Tent, 12 oz. army duck with 8 oz. army duck sod cloth.

We Make Special Oiled or Waterproof Covers

Write for Price per Square Foot.

## HAY-COCK COVERS

Hay-Cock Covers are especially valuable in case of sudden storms coming up while the hay is in the shock. No good farmer can afford to be without a supply of these covers.

Made with Eyelets and Ropes in each corner, to which pegs can be attached, or the rope forced into the hay by a finishing thrust of the hay fork.

Prices on application.

## SEPARATOR, HARVESTER AND BINDER COVERS

"Pattern" covers are made so that they protect the machine completely when it is not in use, or when being moved from place to place. When the Separator is at work the cover fits between the wheels on the ground, making an excellent grain cloth.

In ordering, give length and width of top of separator.

Those who prefer "spread" covers may order from our list of Paulins.

We make covers of every description, and will quote price for any special design wanted.

## OUR PERFECT FIT

## HARVESTER AND BINDER COVERS

Will Fit Any Machine

We can furnish promptly any of the above covers in 8, 10 or 12 oz. single or double filling duck, or with 10 oz. double filling duck sides and ends and waterproof center.

Prices on application.

## STOCKMEN'S BED SHEETS

Made from One Width Best White Duck

Made of heavy cotton duck. finished with rawhide hame leathers all hand sewed.  
No. 1. 50x19 inches.  
Per pair .....\$6.00

## SAILMAKING

### AN ART

**Sailmaking** is very much more of an art than is ordinarily supposed, and perfection in it can only be attained by long and careful study of the various uses to which sails of different kinds are put, and also of the many fabrics and methods of cutting employed in their construction. It is a well-known fact that Duck or Sail-Cloth has threads running across it called the "filling," and others running lengthwise, over and under the filling, called the "warp," and that when strain is applied to the angle of the cloth it will stretch. The threads of the Duck which run directly across upon the square line from the selvage will stretch but little, and the difficulty which the sailmaker has to encounter is to calculate to what extent the cloths which are cut on an angle (or "gores," as they are called), will stretch when strained by the force of the wind. This is especially difficult in the modern Crosscut Racing Sails. It is necessary to know exactly how the different materials will act under strain, and also the nature and direction of the forces to which each sail will be subjected. Unless calculations and allowances are correctly made, an uneven and pressing sail will result.

An old racing skipper once said that in winning a race one-third of the credit belonged to the boat, one-third to the sails, and one-third to the man at the stick. Carpenter Sails guarantee your winning, provided you have the boat and the man.

Sailmaking is the oldest department of our business and the one in which we take the greatest pride. Our foremen are all men of long practical experience both afloat and ashore, and we employ none but the most skillful yacht sailmakers to be found in the country. Most of our materials are made especially for us and cannot be purchased elsewhere. They comprise the best the market affords, both domestic and foreign.

The best of yesterday is not good enough to-day. This is our motto, which we adhere to in every sense of the word, and our large business and facilities enable us to guarantee our patrons fair prices and prompt shipments.

An idea of the magnitude of this department of our business can be gained from the fact that we cut up, and sell annually, over two and one-half million yards of canvas. An experience of many years enables us to refer to thousands who know us and the class of work we turn out.

No order is too large for our facilities. None too small to receive our best attention.

Our Marine Department issues a special 500 page catalog of Motor Boat Hardware, Sails and Rigging, and we send it to any address on receipt of 20 cents in stamps.

## MEASURING FOR SAILS

Exercise the greatest care in taking measurements.

If your boat or yacht is already sparred, send us the exact length of her masts, boom and gaffs, together with the following measurements:

The distance from bowsprit end to mast.

The distance from stem to mast.

The distance from goose neck or saddle to throat halyard block.

The distance from saddle or goose neck to deck.

The distance from throat to clew, called "diagonal."

The length of each jib stay.

Send designs, plan or blue print, if possible.

## FORE AND AFT SAILS

A to B.	Length of gaff.....	Feet.....	Inches
A " C.	Diagonal.....	"	"
A " D.	Length on mast.....	"	"
D " C.	" of boom.....	"	"
B " C.	" on leach.....	"	"

## JIB AND STAY SAILS

A to B.	Length on stay.....	Feet.....	Inches
A " C.	" on leach.....	"	"
B " C.	" of foot.....	"	"

## GAFF TOPSAILS

For gaff topsails, it is necessary to know the distance from the gaff topsail halyard block to sheave hole at end of gaff, and from same to throat halyard block; also length of gaff from center of jaws to sheave hole.

State whether you wish a working topsail or a club topsail — if the latter, state length of club and yard.

## BALLOON JIBS AND SPINAKERS

Distance from bowsprit end to mast.

Distance from mast at deck to spinaker or balloon jib halyard block. \* Length of spinaker pole.

## SAIL COVERS

For Jibs.— State length of sail when furled and the girth at three or four points.

For Fore and Aft Sails.— State length of both boom and gaff, diameter of mast at goose neck, girth of furled sail (including spars) at mast, at gaff end and at boom end; also the exact distance from mast to each block on the gaff, and to topping-lift-band on boom, if any.

A VIEW IN OUR MAIN SAIL LOFT

## FLAG POLES

## CARPENTER STEEL FLAG POLES

Our Flag Poles are made of steel tubing in sections, which telescope and are fastened by cross bolts, making tight and rigid joints. The joints are furnished with iron collars to keep out the water and improve the appearance.

They are weather and lightning proof, and are especially suitable for suburban homes, schools, country clubs, yacht clubs, parks and buildings.

Our standard poles are fitted with lignum-vitae trucks, gilt ball, manila rope halyards and cleat. We can also furnish them with a ball bearing revolving halyard top if desired, at an additional price.

## PRICES

40 feet, each	\$16.70
Made in 3 sections, 4 1/2 inch tubing, tapering to 2 1/4 inches.	
50 feet, each	\$60.00
Made in 3 sections, 5 inch tubing, tapering to 3 inches	
60 feet, each	\$93.50
Made in 4 sections, 6 1/2 inch tubing, tapering to 3 inches.

A FULL LINE OF WICKER DECK FURNITURE IS SHOWN IN OUR MARINE CATALOG

## PATENT CAMP STOVES

These Stoves are Made from No. 20-Gauge Sheet and Fully Warranted

They are indestructible. These stoves cost only about one quarter as much as a cast iron stove, and will do the work much quicker and better. They will not break or bend. They are light and easy to handle. You can cook, bake, roast, broil and heat, no matter what condition of weather. Biscuits can be baked with one of these in 15 minutes. They burn anything except coal.

## THE SPORTSMAN'S FRIEND

The Sportsman's Friend is a folding stove fitted together with such exactness that it takes only a minute to take it apart and prepare it for traveling, while it can be put together ready for use in the same length of time. The stove is large enough to supply all the cooking necessary for a party of fifteen people.

It is packed in a neat pine box, 4 inches high, 32 inches long, and 17 inches wide. This stove is 29 inches high, 17 inches wide, 16 inches back of oven, and 10 inches high at fire place, when standing on legs ready for use; total height, 23 inches. The oven is 10x10 inches square and 17 inches deep.

Full instructions with each stove in regard to putting them together. Weight of stove, 42 lbs.; crated, 60 lbs. Each .....\$16.50

Cut Showing it Ready for Use and Folded Ready for Traveling

## THE SPORTSMAN'S DELIGHT

The size of this stove is 29 inches long, 17 inches wide, 16 inches high back of the oven, and 11 inches high in the fireplace. These dimensions do not include height of legs. The legs are 7 inches long, making the stove in all 23 inches high when in use.

The pipe hole is for 5-inch pipe, and the cooking holes are 5 inch. The oven is 10 inches wide, 11 inches high, and 17 inches deep.

Every cooking hole on top of stove is protected with a cast iron ring  $\frac{1}{2}$ -inch thick by  $1\frac{1}{2}$  inches wide, riveted firmly on inside of each hole. There is also a damper attachment which regulates the heat by three movements. The legs are detachable and can be packed inside of stove, and at the same time all the cooking utensils can be put inside the stove. Weight of stove, 50 lbs.; crated 70 lbs. Each, \$13.50

## THE "LITTLE PET"

Cut Showing Stove Ready for Use and Folded Ready for Traveling

The "Little Pet" is small, easily supplies the desires and wants of small camping parties, such as individual hunters or small families. These stoves are manufactured in two ways, one of which can be folded as shown in cut, and one which does not fold, but can be carried as conveniently as a valise.

This stove occupies a space 23 inches in length, 12 inches high and 12 inches wide. The oven is 8x8 inches square by 12 inches deep. The stove is 18 inches high when standing on its legs, is packed in a box ready for use. The box is 4 inches high, 27 inches long and 14 inches wide. This stove has two cooking holes, each 5 inches, and a pipe hole for a 5-inch standard pipe. Weight of stove, 25 lbs.; crated, 35 lbs.

Folding stove, each .....\$13.50

Non-folding stove, each ..... 10.00

Pipe (telescopic), 6 lengths 15 inches long ..... 1.75

## SHIPMATE RANGES

For Coal or Wood

We show in our Marine Catalog a complete line of stoves and ranges for camping and marine use. We are agents for the Shipmate ranges and can furnish promptly any of the various numbers made by that company.

## SIBLEY HEATING STOVES

The only stove to use for heating. Has no bottom. Burns everything. 18 inches diameter at base; 4 inches diameter at top. Height, 28 inches. Including 9 foot pipe, each....\$5.00

## G. B. C. KEROSENE RANGE

Single and Double Burner

A very serviceable and compact range for marine use. The framework is of galvanized iron. The tank is of polished brass.

The tank burns common kerosene as a fuel, which is fed to the burner under pressure. The design of the burner is very simple and contains no brass gauze in the burner head to fill up and clog the burner. The flame can be regulated by the small valve on top of the filler cap of the tank.

To operate, heat the burner by priming with alcohol. When the alcohol is nearly consumed give the pump a few strokes and the kerosene vaporizes, and the stove will burn properly, after which additional pumping will heighten the flame to suit requirements.

The tank holds one quart, which will operate to the average of from 14 to 16 hours. One quart of water at 15° can be brought to boil in three or four minutes.

## Single Burner

Stock No.	Length Over All inches	Width Over All inches	Height to Top of Rail inches	Inside of Rail inches

THE OPTIMUS PORTABLE  
CAMP STOVE

The stove is identical with the one shown opposite. It is, however, constructed in a more convenient form for carrying. Case is made of metal. It contains the stove and a bottle for alcohol.

These Optimus stoves burn equally well in indoor or in exposed places. There is no wind that will blow them out. Easy to keep clean as there is no wick of any kind.

Stock No.  
M 701 FF

Weight, lbs.  
5

DOUBLE BURNER  
UNIVERSAL ALCOHOL STOVE

This double burner stove is constructed along the lines of the single burner and operates in the same manner.

It is large enough to accommodate a bake oven as well as all ordinary cooking utensils. The tank is large, holds two quarts, to avoid frequent refilling. Thoroughly reliable, nothing to get out of order. Made of galvanized steel with dull nickel grate and brass tank and rail. Weighs packed in wood box, 30 lbs.

Stock No.	Length inches	Depth inches	Height Over All inches
M 201 FF	22	17	13 3/4

## UNIVERSAL ALCOHOL STOVE

This stove converts denatured alcohol into gas and burns with an intensely hot blue flame. Simple to operate, regulates like an ordinary gas range. Boils one quart of water at 50° F. in seven minutes. Accommodates all ordinary cooking utensils. Clean, odorless and absolutely safe. Body of burner enclosed to protect it from wind when used in exposed places.

Body of stove, galvanized steel; grate, dull nickel; rail and reservoir, polished brass. Diameter of grate is 10 3/4 inches; weighs packed in wood box, 11 lbs.

Stock No.	Height to Top of Rail inches	Extreme Height inches
M 301 FF	5	10 3/4

## Single Burner

## Three Burner

Stock No.	Length inches	Depth inches	Height Over All inches
M 101 FF	29 3/4	19	12 3/4

## THE OPTIMUS STOVE

Burns kerosene, is absolutely safe, clean and odorless. Will boil a quart of water in three minutes. When burning at its highest power it will consume one quart of kerosene in six hours. Flame regulated by turning of a thumb screw. Tank is of polished brass, holds one quart, and a combination silent and roaring burner is furnished.

# FLASH LIGHTS

Style of No. 12, 22 and 23 with Vulcanized Fibre Cases

Style of No. M22 and M23 with Vulcanized Fibre Cases

Style of No. 72, 42 and 43 with Nickel Plated Cases

The flash lights made with vulcanized fiber cases have nickel plate trimmings. The cases on the oblong flash lights are entirely nickel plated.

The batteries are of the best quality. As they are used for intermittent service, it is impossible to state the exact length of time they will last. The average continuous life of the battery is fourteen hours, but for intermittent service the life of the battery is increased to 100 per cent. We guarantee them equal to any flash lights on the market, and should you find any battery that is not up to standard it will be promptly replaced without charge.

# Marine Department

---

**O**UR Marine Supply Department, in point of age, represents the corner stone of our business. We have always catered to the "men who go down to the sea in ships," and the best smell we know is—TAR.

The following pages show only a few items in our very extensive stock of Marine Hardware. The marine supply line is so varied and distinctive that we have thought best to cover it with a separate catalog. We therefore urge all those who are interested in boating, or boat building to

## Send for our Marine Supply Catalog

It is free for the asking to all holders of this, our General Catalog No. 110.

We take this opportunity of stating that we also issue separate catalogs covering tents and camp equipment, awning hardware, mechanical rubber goods, as well as innumerable pamphlets and circulars covering other lines.

**GEO·B·CARPENTER & CO:**

## OAR LOCKS

GALVANIZED IRON AND BRASS

We do not recommend Cast Iron Rowlocks. All Rowlocks are listed per pair.

6x6

Inches  
6x7

## SINGLE CANOE PADDLES

Fig. 149A

## Spruce

Made of selected eastern spruce, hand finished and varnished with either plain or copper tip in the following lengths: 4, 4 ½, 5, 5 ½ and 6 feet.

## Maple

Made of selected hard maple, hand finished and varnished. While heavier than spruce it is tougher. Plain tip. Lengths: 4, 4 ½, 5, 5 ½ and 6 feet.

## SPRUCE BOAT OARS

Fig. 148B

## Plain with Copper Tips

Made of selected Eastern spruce, very light.

Length, feet	Length, feet	Length, feet	Length, feet
6	7	8	10
6 ½	7 ½	9	

## Leathered and Varnished with Copper Tips

Similar to our plain spruce oar, finished with good spar varnish and leather.

Length, feet	Length, feet	Length, feet	Length, feet
6	7	8	10
6 ½	7 ½	9	

## SPOON OARS

Fig. 148C

Selected Eastern spruce leathered and varnished, furnished with taper handles.

Length, feet	Length, feet	Length, feet	Length, feet
6	7	8	10
6 ½	7 ½	9	

## PUSH PADDLES

Fig. 149B

## Ash

Straight grained ash in the following lengths: 9, 10 and 12 feet.

## Spruce

Selected eastern spruce, plain tip in the following lengths: 9, 10 and 12 feet.

## MARINE GLASSES

With Sole Leather Case and Strap

These glasses are our own importation direct from the celebrated factories of Colmont and Lemaire.

Colmont Marine Glasses while moderate in price are of superior finish and have excellent optical qualities.

The line of Lemaire Marine Glasses ranks as the best that can be produced abroad.

M116V	Lemaire		Black morocco covered body, japan mountings, high model. Grand power. This is the most powerful glass made in power, breadth of field of vision and clear definition.		

## ANEROID BAROMETERS

Our line of Aneroid Barometers consists of both German and French made. The P. & B. brand of barometers are imported by us direct from the famous French makers, who have a reputation of turning out the finest instruments manufactured. The unbranded instruments are of German manufacture, not of as high a grade as the French make, but very accurate and serviceable instruments for the money. Both types can be set for altitude by turning a small set screw in a recess in the back of the instrument. Stock Diam. of Face

## BLOCK CORK RING BUOYS

Made up of solid block cork slabs turned round and smooth. Canvas covered and roped. Passes government inspection for use on passenger vessels, etc.

Stock No.	Length inches
M 1139 B	16
M 1140 B	19
M 1141 B	21
M 1142 B	24
M 1143 B	27
M 1144 B	30

## PAINTING AND LETTERING RING BUOYS

Ring Buoys are usually exposed to the weather, and it is well to have them painted, which not only preserves them but keeps them from getting water soaked. Painted with two coats of white lead and lettered in black—extra.

On boats carrying passengers for hire (this includes rented launches at boat liveryies only), the never-sink jacket or block cork life preserver will be approved.

## METALLIC LIFE BOATS

All sizes are constructed in accordance with the U. S. Steamboat Inspection Service and approved and recommended by the Board of Supervising Inspectors of Steam Vessels.

## CLARK'S PATENT METALLIC LIFE RAFT

Of the latest revised type built according to Rules and Regulations of the Board of Supervising Steamboat Inspectors. Each raft is furnished with oars, oarlocks, lifelines, floats, boat hook, paddles and painter.

and baffles. The tanks are composed of independent galvanized iron tanks, securely fastened together in a wooden frame thoroughly braced and bolted. Tanks are constructed of No. 20 galvanized iron with flanged heads, double riveted and soldered. Each tank is fitted with testing flange and cap for air pump connection and tested and painted before being assembled within framework.

## List of Sizes

Fig. A476

**THE WATER LIGHT**  
Showing outside of light  
and method of attaching light  
and buoy to ship's rail.

**Fig. A476 LIFE BUOY WATER LIGHT**

Approved by the U. S. Board of Supervising Inspectors

By attaching a line to the ring at the bottom of the light and then to the ring buoy, and hanging the light on the rail by the ring at the top, it is only necessary to pull the light from the hook (which unseals a soft metal cap), and this operation makes the light self-igniting the moment it strikes the water.

Size, 8x10 inches. Weight, 5½ lbs. 250 candle power. Burns 45 minutes.  
Price .....each \$5.00

Fig. A477

**Fig. A477 WATER LIGHT**

For Life Boat and Raft Equipment

As Approved by the U. S. Board of Supervising Inspectors

This light has a small metal cap attached to a ring, i. e., A. By pulling this ring unseals the light; same is then ready for emergency use, either on board ship, or can be thrown overboard attached to a rope. This light is also buoyant, burns for over one hour and gives 300 candle power light.  
Each .....\$5.00

## CARPENTER ELECTRIC RUNNING LIGHTS

Fig. M1506EX Polished Brass

These lights are made in three sizes for motor boats of Class 1, Class 2 and Class 3.

The bodies of the lamps are thin brass castings. The removal of two screws releases the tops of the lamps so that lens and bulbs can be removed. Rubber gaskets keep lenses from rattling and prevent breakage.

Fitted with Bayonet base sockets and 6 V. Mazda bulbs, approximately 3 C. P., with wires extending through the back of the lamps. Wires will be extended through the bottom of lamps if preferred, and low voltage bulbs for operating on dry cells furnished in place of regular equipment if desired.

Class 1 lights consist of one pair of side lights, which can be used in place of a combination light.

Class 2 and Class 3 lights are made up in sets, consisting of a pair of side lights and one bow light.

Keyhole slots are cut in the back of the lamps so that round head screws set on the light boxes will hold them in place.

Stock Number	Class	Height Over-All inches	Width of Base inches	Weight per Set Lbs.
M1506EX	1	3 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$
M1606EX	2	4 $\frac{1}{2}$	3	7 $\frac{1}{4}$
M1607EX	3			

## CARPENTER ELECTRIC POST LIGHT

Fig. M1511EX Polished Bronze

Combines Class 2 bow light with a heavy and practical snubbing post. Will match our Class 2 electric running lights.

The post light is made to screw on to the deck, and is fitted with Bayonet base socket and 6 V., 3 C. P. Mazda bulb, with wires for making connections.

Stock Number	Extreme Height, inches	Diam. of Post, inches	Diam. of Base, inches	Weight Lbs.
M1511EX	5 $\frac{1}{4}$	5 $\frac{1}{4}$	6 $\frac{3}{8}$	6

## CARPENTER CLASS 1 ELECTRIC COMBINATION LIGHT

Fig. M1611EX

A combination light for Class 1 boats, that is compact, neat and durable, and that will add to the appearance of any craft upon which it is put.

The body is cast bronze. The top, to which the lamp is fastened, is detached by a half turn. For a more detailed description see specifications of other lamps on this page.

Stock Number	Height inches	Base inches	Weight Lbs.
M1611EX	4	2 $\frac{5}{8}$ x 5 $\frac{1}{2}$	5

A full line of Marine lights is shown in our Marine catalog.

## THE CARPENTER WIRELESS SEARCHLIGHT

Fig. 172A

The Carpenter Wireless Searchlight is constructed to harmonize with other deck hardware. It is perfectly balanced and makes an ideal installation on any craft.

All parts are cast bronze, highly polished. The wiring is concealed within the fork and base, which are cast hollow, eliminating all exposed wiring, and reducing the wear to a minimum. The lamp and fork are removable from the base; the plug contact in the base breaks the contact when the lamp is removed.

The reflector is 8 inches in diameter in the Cabin type, and 5 or 8 inches in the Deck type. The reflectors are of highest grade silver and the lights are fitted with 6 volt Mazda lamps. Other voltages will be furnished if specified at time of ordering.

Prices on application.

## THE CARPENTER SEARCHLIGHT CONTROL

The Carpenter Searchlight Control is the only control of its kind on the market, that will control both actions of the searchlight with one lever. It has a Universal action, allowing the beam to be thrown up or down, or to right or left, with but the single control lever shown in the illustration. It can be attached to any type of Cabin searchlight having a  $\frac{3}{8}$  inch control rod, and can be installed any distance from the searchlight.

Furnished with a bulkhead plate, handle, etc., complete with the exception of the rod used in making the connection.

Fig. 172B

Used in combination with the Carpenter Wireless Searchlight, it forms the most compact and efficient article of its kind in use today, and its simple—yet sturdy—construction, and satisfactory service have made it an instant favorite in the boating fraternity.

Prices on application.

## DECK TYPE ARC SEARCHLIGHT PROJECTORS

This searchlight is made for 110 or 125 volt direct current unless otherwise specified.

The light is made of heavy brass, highly polished and supported on ball bearings so that it can be operated with the least possible friction. The base is made of polished brass and aluminum. Mangin ground glass silver plated mirrors are used. The carbon feeding mechanism is made so that it is impossible for it to stick as the carbon holders are pivoted on the lower ends, doing away with the slides. An automatic cut-off is provided to break the current to the feed coil, thereby stopping the feed, should the operator neglect to pull the switch when the carbons are consumed to a safe distance from the carbon holders.

Stock No.	Size, inches
M 690 X	8
M 691 X	10

Stock No.	Size, inches
M 692 X	15
M 693 X	20

## CABIN TYPE ARC SEARCHLIGHT PROJECTORS

This cabin type searchlight is similar in other respects to the 10 inch deck type projector, excepting the controlling device, which is made of polished brass and can also be furnished for distant control, which is operated by wire cables.

## GENERATING SETS

## DIRECT CONNECTED, STEAM DRIVEN

Engberg Direct Connected Steam Driven Generator Sets are made within a range of from  $2\frac{1}{2}$  to 50 Kilowatt. They are well known to the trade and have an established reputation for long service and freedom from repairs. Accessibility and ease of adjustment of all working parts is a distinctive feature. Each set before being shipped is carefully tested and guaranteed in perfect working order and they specially guarantee the rating, stability and performance of same. These generators are of the Multipolar type and compound, wound for 110 volts, unless otherwise specified. Detailed information will be furnished on application.

K. W.	No. of Poles.	Size of Engine.	Steam Pressure.	Rev. per Minute.	Diameter Steam.	Pipes. Exhaust.	Net Weight, Lbs.

## DIRECT CONNECTED, GASOLINE DRIVEN

We are listing and describing below two sizes of direct connected gasoline driven generator sets, which have been meeting with general approval.

The No. 1 size has a single cylinder, 4 cycle engine and will light 25 incandescent lamps of 16 C. P. each. The No. 2 has double cylinder, 4 cycle engine and will light 50, 16 C. P. lamps. The dynamos are wound to 110 volts.

The engines are fitted with heavy fly-wheel and the speed at which they are run makes the lights absolutely steady. There is no disagreeable flickering such as is sometimes associated with gasoline engine driven dynamos.

On one side of the engine is a circulating pump for pumping the cooling water through the water jacket. The engine is fitted with carburetor, batteries, coil and multiple tank oiler. Ignition by jump spark. Gasoline may be taken from main supply tank or auxiliary, whichever is more convenient to the user.

No.	Length, inches.	Width, inches.	Height, inches.	Speed.	Weight, Lbs.
1	34	20	30	750 r.p.m.	475
2	42	20	30	750 r.p.m.	900

Other sizes of gasoline driven generator sets can be furnished, and prices, together with illustrations and description, will be furnished upon application.

## BAKER'S PATENT OIL COMPASS

We believe this to be the finest compass made. It has been on the market for over 25 years and is well known to the marine trade. It will regularly be supplied with the new style navy card, reading from 0 to 360°, but the old style card can be supplied to order, if preferred.

### Prices on Application.

M 154 V	7 1/2	12

## LOTHROP'S FOG HORN

Cut Shows Interior Arrangement

The Lothrop's Fog Horns are well known and need no introduction. They are well made in every respect, strong, serviceable and will last for years. The only part that is likely to become worn out in time is the reed, and this can be replaced

for less than a dollar on all but the largest size.

### Prices on Application.

3 1/2	16 1/2	14 1/2	22	588	3/4

## CAVEL CAPSTAN

Cast Iron, Painted

This Capstan is single purchase and revolves with the Sun. It will stand all that four men can pull on it and will handle line up to 2 inches in diameter, hauling up anchors from 500 to 700 pounds weight. A piece of 1 1/2 inch pipe about four feet long usually serves for levers. To lubricate, oil through either horn.

Height inches	Tip to Tip of Horns inches	Diameter of Base inches	Weight lbs.
18	16 1/2	14 1/2	115

## VICTOR CAPSTAN

A compact and strong little machine furnished in galvanized iron or painted red and black.

Stock Nos.		Diameter Drum inches	Diameter of Base inches	Height from Deck inches	Length of Lever inches	Weight Lbs.
Painted Red and Black	Galvanized					
M 241 X	M 243 X	4	9	10	28	50
M 242 X	M 244 X	5	12	15	36	120

## CAPSTAN BARS

None of the capstans catalogued are furnished with capstan bars, excepting the Victor. We will furnish capstan bars to order, and in ordering specify for what size and make of capstan the bars are wanted or send a sketch giving the diameter at the small as well as the large end of taper and length of handle over all.

These are only a few of the Capstans we stock. The rest are listed in our Marine Catalog. Have you a copy?

## THE PROVIDENCE

### Single Barrel Steam Capstan

The Single Barrel Steam Capstan is especially useful for working the hawsers of steamships while backing toward wharves or turning in narrow channels, and for barges, schooners and tugs in rapid currents. It also is available for elevators and drydocks and for warping vessels through locks, and for all kinds of hoisting on shipboard or land.

Double gearing provides power or speed. The changes are effected by placing the block key in the base for power and in the head for speed. The speed can be increased about three times in this way when the load does not require the low gear for power.

The engines can be hung under the deck, as represented in the illustration, or can be laid on top of the deck below. **Non-reversing** or **brass-link reversing** engines are furnished.

Before shipment the capstan and engines are tested under actual working conditions.

#### With Non-Reversing Engines

No.	Size	Diam. of Barrel over Whelps, inches	Diam. of base, inches	Height inches	Double Cylinders, inches	Circumfer- ence of Rope, inches	Approx. Net Weight, lbs.

Cuts are exact size of wire and chain.

The most popular weldless chain on the market. Both ends of a link are identical in shape, the planes lying at right angles to each other, the tie being at the center. The neatest, lightest chain, size for size, of any weldless wire chain, its uniformity and smoothness making it peculiarly adaptable to a wide variety of purposes. Supplied in coil (100 ft. packages, 250 ft. reels, kegs or barrels), cut to any length or fitted with attachments.

This chain is largely adopted by Porch Swing Manufacturers in the Hot Galvanized Polish Bright Finish and is supplied to such trade to their order. Samples and prices upon request. Send specifications and full data.

## OPEN THIMBLES

Steel

3 1/4 to 8 inches, black, per lb., \$0.18; galvanized, per lb., \$.20.

Measure across the hole in the Thimble from edge to edge.

The hole in the Thimble also score of the same, will usually equal one-half the diameter of the Thimble viz., a three inch Thimble will give a 1 1/2 inch score, and a hole about 1 1/2 inch diameter.

Outs. Dia. across Hole	3/4	7/8	1	1 1/8	1 1/4	1 3/8	1 1/2	1 3/4	2	2 1/4	2 1/2	2 3/4	3

## JEFFERY'S SPECIAL MARINE CANOE GLUE

Guaranteed to Be Waterproof

Its peculiar properties are those of flexibility and durability, and although it becomes soft and pliant under heat, it still retains its adhesion to timber, fiber, etc., and is clean and insoluble in water.

No canoeist should be without a can of

this Glue; it is invaluable for quick repairs on either canvas or cedar canoes.

In cans of..(emergency) 1 lb. 2 lb. 5 lb.

For temporary repairs only a candle is needed. Dig out a piece of glue as large as required, mold it in the hand after greasing with the candle, melt the face of the glue and apply to the hole.

### No. 1. BLACK, WHITE OR YELLOW YACHT GLUE Extra Quality

For Deck and Hull Seams of Yachts and Boats.

In cans of 1 lb., 2 lbs., and 5 lbs.

In bulk, packed in wooden cases containing: 14 lbs., 28 lbs., 56 lbs., and 112 lbs.

### No. 2. BLACK OR YELLOW SHIP GLUE First Quality.

For Deck and Hull Seams of All Classes of Vessels.

In bulk, packed in wooden cases containing: 14 lbs., 28 lbs., 56 lbs., and 112 lbs.

### No. 7. BLACK GLUE Soft Quality

Used largely by manufacturers of knock-down boats.

Also used in combination with canvas for decks and canvas boats and canoes, and in combination with calico for sponsons.

It is invaluable for quick repairs.

In cans of 1 lb., 2 lbs., and 5 lbs.

In bulk, packed in cases containing: 14 lbs., 28 lbs., 56 lbs., and 112 lbs.

### No. 10. BLACK GLUE Soft Quality

Very elastic, especially recommended for joining hollow spars.

In cans of 1 lb.

## LePAGE'S LIQUID GLUE

In Tin Cans

Half pints, packed 2 dozen in box.

Pints, packed 1 dozen in box.

Quarts, packed 1 dozen in box.

Half gallon cans, packed ½ dozen in box.

Gallon cans, packed ½ dozen in box.

In Bottles

Small size, 1 doz. in box, packed in gross and ½ gross cases.

Large size, 1 doz. in box, packed in gross and ½ gross cases.

## WATERPROOF LIQUID MARINE GLUE "C" QUALITY

Ready for use. For attaching canvas, felt, oilcloth, rubber, leather or linoleum to iron, steel or wood, rendering same absolutely waterproof.

In applying can should be placed in hot water if glue is too thick to work freely. Spread glue over the surface with a stiff brush after which canvas or other material can be laid over glue and a warm flat iron passed over same to smooth out wrinkles and make perfect contact.

1 gal. will cover about 10 ¾ square yards.

## MARINE GLUE THINNER

Thinning should be used sparingly in the same manner as a carpenter adds a little water to animal glue when it becomes too hard or brittle.

Put up in cans of ½ pint, 1 pint, 1 quart, ½ gallon and 1 gallon.

## INLAND LAKE CUSHION LAC

An elastic, durable finish for dressing up leather, pantasote, etc., restoring the color and lustre the leather originally had. It is waterproof and is warranted not to crack leather or pantasote. Dries in 15 minutes so that the cushion can be used shortly after being coated without danger of either sticking or softening. It is a leather preservative, and is made in the following colors: Black, red, brown, dark, green, blue and transparent.

Put up in cans of ¼ pint, ½ pint, 1 pint, 1 quart, ½ gallon, and 1 gallon.

USEFUL INFORMATION  
WATER

**Doubling the diameter** of a pipe increases its capacity four times. Friction of liquids in pipes increases as the square of the velocity.

To find the pressure in pounds per square inch of a column of water, multiply the height of the column in feet by .434. Approximately, we say that every foot elevation is equal to  $\frac{1}{2}$  pound pressure per square inch; this allows for ordinary friction.

To find the diameter of a pump cylinder to remove a given quantity of water per minute (100 feet of piston being the standard of speed), divide the number of gallons by 4, then extract the square root, and the product will be the diameter in inches of the pump cylinder.

To find quantity of water elevated in one minute, running at 100 feet of piston speed per minute, square the diameter of the water cylinder in inches, and multiply by 4.

**Example**—Capacity of a 5 inch cylinder is desired. The square of the diameter (5 inches) is 25, which, multiplied by 4, gives 100, the number of gallons per minute (approximately).

To find the horse-power necessary to elevate water to a given height, multiply the weight of the water elevated per minute in pounds by the height in feet, and divide the product by 33,000 (an allowance should be added for water friction, and a further allowance for loss in steam cylinder, say from 20 to 30 per cent).

The area of the steam piston, multiplied by the steam pressure, gives the total amount of pressure that can be exerted. The area of the water piston, multiplied by the pressure of water per square inch, gives the resistance. A margin must be made between the power and the resistance to move the pistons at the required speed, say from 20 to 40 per cent, according to speed and other conditions.

To find the capacity of a cylinder in gallons, multiply the area in inches by the length of stroke in inches, will give the total number of cubic inches; divide this amount by 231 (which is the cubical contents of a U. S. gallon in inches), and product is the capacity in gallons.

## ELECTRICAL UNITS

**Volt**—The unit of electrical motive force. Force required to send one ampere of current through one ohm of resistance.

**Ohm**—Unit of resistance. The resistance offered to the passage of one ampere, when impelled by one volt.

**Ampere**—Unit of current. The current which one volt can send through a resistance of one ohm.

**Coulomb**—Unit of quantity. Quantity of current which, impelled by one volt, would pass through one ohm in one second.

**Farad**—Unit of capacity. A conductor or condenser which will hold one coulomb under the pressure of one volt.

**Joule**—Unit of work. The work done by one watt in one second.

**Watt**—The unit of electrical energy, and is the product of ampere and volt. That is, one ampere of current flowing under a pressure of one volt gives one watt of energy.

One electrical horse-power is equal to 746 watts.

One Kilowatt is equal to 1,000 watts.

To find the watts consumed in a given electrical circuit, such as a lamp, multiply the volts by the amperes.

To find the volts, divide the watts by the amperes.

To find the amperes, divide the watts by the volts.

To find the electrical horse-power required by a lamp, divide the watts of the lamp by 746.

To find the number of lamps that can be supplied by one electrical horse-power of energy, divide 746 by the watts of the lamp.

To find the electrical horse-power necessary, multiply the watts per lamp by the number of lamps, and divide by 746.

To find the mechanical horse-power necessary to generate the required electrical horse-power, divide the latter by the efficiency of the generator.

To find the amperes of a given circuit, of which the volts and ohms resistance are known, divide the volts by the ohms.

To find the volts, when the amperes and watts are known, multiply the amperes by the ohms.

To find the resistance in ohms, when the volts and amperes are known, divide the volts by the amperes.

## STEAM

**Saturated Steam**—Steam at a given temperature is said to be saturated when it is of maximum density for that temperature. Steam in contact with water is saturated steam.

**Wet or Supersaturated Steam**—Steam which has water (in the form of small drops) suspended in it is called wet or supersaturated steam. If wet steam be heated until all the water in it is evaporated, it is said to be dried.

**Superheated Steam**—If dry saturated steam be heated when not in contact with water, its temperature is raised and its density diminished or its pressure is raised. The steam is then said to be superheated.

**Dryness Fraction of Steam**—Let  $W$  = weight of a given quantity of wet steam,  $w$  = weight of water suspended in this steam, then dryness fraction =  $\frac{W-w}{W}$ .

Under ordinary conditions and good stoking, the dryness fraction is about 95 per cent.

**Properties of Saturated Steam**—Nearly all published tables giving the properties of saturated steam have been constructed on empirical formulae based on the researches of Regnault. The table below has been prepared with great care after comparing the tables given by Clark, Cotterill, Dwelshauvers-Dery, Marillane, Gray, Peabody, Thurston, Weisbach and others. The temperature it was first decided on by a system of averaging and plotting.  $H$  was then calculated from the formulae,  $H=1081.94 + .305t$ .

The quantity  $t-h$  was next determined in the same way as  $t$  was found, and this decided the value of  $h$ . Then,  $L = H-h$ .  $w$  was next determined, and then  $v = \frac{1}{w}$ .

The quantities  $H$ ,  $h$  and  $L$  are for one pound weight of steam or water.

$p$  = absolute pressure or pressure above a perfect vacuum, in pounds per square inch.

$t$  = temperature in degrees Fahrenheit.

$H$  = total heat in steam above that in water at  $32^\circ$ .

$h$  = heat in water (at  $t^\circ$ ) above that in water at  $32^\circ$ .

$L$  = latent heat or heat of vaporization =  $H-h$ .

$w$  = weight of one cubic foot of steam in pounds.

$v$  = volume of one pound weight of steam in cubic feet =  $\frac{1}{w}$ .

Quantities of heat are expressed in British thermal units.

A British Thermal Unit is the amount of heat necessary to raise the temperature of one pound of water  $1^\circ$  F., when the water is at its greatest density, namely, from  $39^\circ$  to  $40^\circ$  F.

## GENERAL RULES FOR DETERMINING THE WEIGHT OF ANY PIECE OF WROUGHT IRON

One cubic foot of wrought iron..... = 480 lbs.  
 One square foot, one inch thick..... = 480 = 40 lbs.  
 One square inch, one foot long..... = 480 = 3½ lbs.  
 One square inch, one yard long..... = 3½ x 3 = 10 lbs.  
 Hence, the weight of any piece of wrought iron in pounds per yard is equal to 10 times its area in inches.

**Example**—The area of a bar 3" x 1" = 3 square inches, and its weight is 30 lbs. per yard.

For round iron the weight per foot may be found by taking the diameter in quarter inches, squaring it, and dividing by 6.

**Example**—What is the weight of 2 inch round iron? **Example**—What is the weight of ¾" round iron?  
 $2^2 = 8$  quarter inches.  $8 \div 6 = 1\frac{1}{3}$ .  
 $\frac{1}{2} = 10\frac{1}{2}$  lbs. per foot of 2" round.  $\frac{3}{4} = 3$  quarter inches.  $3^2 = 9$ .  
 $9 \div 6 = 1\frac{1}{2}$  lbs. per foot of ¾" round.

## USEFUL INFORMATION

## RULES FOR FINDING THE HORSEPOWER OF AN ENGINE

**Problem**—What is the horse-power of an engine whose piston is 12 inches in diameter, stroke 16 inches, revolutions 140 per minute, mean steam pressure 30 lbs. per inch on piston?

**Rule 1**—Multiply the area of piston's square inches by the mean pressure per square inch, then multiply this product by the speed of the piston in feet per minute, then divide this last product by 33,000 foot pounds per horsepower.

**Example**—Diameter of piston 12 inches. Multiply by itself  $12 \times 12 = 144$  square inches of piston. Reduce this to square inches of area by multiplying  $144 \times .7854$  ( $.7854 \times 10000$ ) = 113.0976 square inches of area, then multiply this by mean pressure on piston, 30 lbs.,  $113.0976 \times 30 = 3392.928$  lbs. total pressure on piston, then multiply this product by speed of piston, 373.3 feet per minute = 1266580.0224. Now divide this by 33,000 foot pounds per horse-power = 38.3 horse-power which this engine will generate with the steam pressure and speed given.

**Rule 2**—Multiply the square of the piston's diameter in inches by stroke in inches. Multiply resultant by revolutions per minute. Then multiply this product by 4. Now point off 5 figures from the right and multiply by the mean pressure in lbs., the final product is the horse-power of an engine.

**Example**—Square inches of piston's diameter is  $144 \times$  by stroke 16 inches = 2304. This  $\times$  by revolutions per minute 140 = 322,560, resultant  $\times$  by 4 = 1,290,240 which  $\times$  by mean pressure 30 lbs. = 38,704 horse-power of engine. This rule is correct within  $\frac{1}{4}$  of a horse-power in 100.

**Rule 3**—Multiply the square of piston's diameter in inches by mean pressure in lbs. Multiply the product by twice the stroke in feet. Multiply resultant by revolutions per minute. Then multiply this product by constant .238, the final resultant will be the horse-power.

**Example**—Square inches of piston 144  $\times$  by mean pressure 30 = 4,320  $\times$  by twice the stroke in feet 2  $\times$  = 11,520  $\times$  by revolutions 140 = 1,612,800  $\times$  by constant .238 = 383.38 horse-power of engine. The constant, .238, is found by dividing .7854 by 33,000 foot pounds.

**Rule 4**—Multiply the area of piston by mean pressure. This product by the stroke in inches. Multiply resultant by 2. Again multiply by the revolutions per minute. Then divide product by 12, and divide final resultant by 33,000, the quotient will be the horse-power of engine.

**Example**—Area of piston 13,0976  $\times$  by mean pressure 30 = 392,928  $\times$  by stroke 16 inches = 5,428,684.8  $\times$  by 2 = 10,857,369.6  $\times$  by revolutions per minute 140 = 1,520,031,744  $\div$  by 12 = 126,669,312  $\div$  33,000 = 38.38 horse-power of engine. In the foregoing rules no allowance is made for the piston-rod, which, if so accounted for, would slightly reduce the horse-power in each example.

To find the side contents of an equal square, multiply its diameter by .8862.

## TO FIND THE HORSE-POWER OF SHAFTING

To find horse-power of a shaft, multiply the cube of its diameter in inches by the revolutions per minute, and divide product by 82 for steel or 110 for iron shafting. **Example.** Diameter of shaft, 2 inches; revolutions, 160; then  $2^3 \times 160 = 128 \times 82 = 14.4$  horse-power, or  $2^3 \times 160 = 1280 \div 110 = 11.6$  horse-power of iron shaft.

## FLY WHEEL

To find the weight of the rim of the fly wheel for an engine: Nominal H. P.  $\times 200 \div$  the square of the velocity of the circumference in feet per second = weight in cwt.

## RELATIVE VALUE OF HEATING SURFACE

Horizontal surfaces above the flame equal.....	1.00
Vertical surfaces above the flame equal.....	.50
Horizontal surfaces beneath the flame.....	.10
Tubes and flues equal $1\frac{1}{4}$ times their diameter.	
Convex surfaces above the flame equal $1\frac{1}{2}$ diameter.	

## FEED WATER REQUIRED BY SMALL ENGINES

Gauge Pressure at Boiler	Pounds Water per Effective H. P. per hour	Gauge Pressure at Boiler	Pounds Water per Effective H. P. per Hour
10	118	60	75
15	111	70	71
20	105	80	68
25	100	90	65
30	93	100	63
40	84	120	61
50	79	150	58

## TO DERIVE WEIGHT OF IRON

The average weight of wrought iron is 480 lbs. per cubic foot.

To find the sectional area, given the weight per foot:—

Multiply by  $\frac{16}{9}$ .

To find the weight per foot, given the sectional area:—

Multiply by  $\frac{9}{16}$ .

For round iron the weight per foot may be figured by taking the diameter in  $\frac{1}{4}$  inches; square it and divide it by 6.

**Example**—What is weight per foot of 2 inch round iron?

2 inches = 8 quarter-inches.  $8 \times 8 = 64$   $64 \div 6 = 10\frac{2}{3}$  lbs. per foot.

**Example**—What is weight per foot of  $\frac{3}{4}$  inch round iron?

$\frac{3}{4}$  inch = 3 quarter-inches.  $3 \times 3 = 9$   $9 \div 6 = 1\frac{1}{2}$  lbs. per foot.

Steel weighs 2% heavier than wrought iron.

## USEFUL INFORMATION

## TO TEMPER STEEL ON ONE EDGE ONLY

Dip the edge to be tempered into hot lead until proper color; then temper in ordinary fashion.

## TO DRILL HARDENED STEEL

Cover your steel with melted beeswax; when coated and cold, make a hole in the wax with a fine-pointed needle or other article the size of hole you require, put a drop of strong nitric acid upon it; after an hour rinse off and apply again; it will gradually eat through.

A mixture of 1 ounce of sulphate of copper,  $\frac{1}{4}$  ounce of alum,  $\frac{1}{2}$  teaspoonful of powdered salt, 1 gill of vinegar and 20 drops of nitric acid will make a hole in steel that is too hard to cut or file easily.

A small hole drilled at the end of a crack in sheet steel will stop it from growing longer.

## ANNEALING STEEL

For small pieces of steel, take a piece of gas pipe, 2 or 3 inches in diameter, and put the pieces in it, first heating one end of the pipe, and drawing it together, leaving the other end open to look into. When the pieces are of cherry red, cover the fire with dust, use a charcoal fire, and leave the steel in over night.

## IN TURNING STEEL OR OTHER HARD METAL

Use a drip composed of petroleum two parts and turpentine one part. This will insure easy cutting and perfect tools when otherwise the work would stop, owing to the breakage of tools from the severe strain.

## TEMPERING RECIPES

Resin, 2 pounds; tallow, 2 pounds; pitch, 1 pound. Melt together and dip the hot steel in it.

Salt,  $\frac{1}{2}$  cupful; saltpetre,  $\frac{1}{2}$  ounce; alum, pulverized, 1 teaspoonful; soft water, 9 gallons. Never heat above a cherry red or draw any temper.

By melting together 1 gallon spermacetti oil, 2 pounds tallow and  $\frac{1}{4}$  pound wax, a mixture is obtained very convenient for tempering any kind of steel article of small size. Adding 1 pound resin makes it suitable for larger articles.

## TO HARDEN GRAVERS

Heat in charcoal dust (not too hot), and plunge into a box of wet, yellow soap. This renders the end of the graver very hard and very tough.

Strong sal soda water or soapy water is much better than clean water to use where water cuts are being taken, either on lathe or planer. When cutting brass, sweet milk is recommended as being better than either the foregoing.

# USEFUL INFORMATION SQUARE OR LAND MEASURE

United States and British

Square Miles	Acres	Square Rods	Square Yards	Square Feet	Square Inches
1	640.	102400.	3097600.	27878400.	.....
....	1.	160.	4840.	43560.	6272640.
....	....	1.	30.25	272.25	39204.
....	....	0.0331	1.	9.	1296.
....	....	.....	0.111	1.	144.
....	....	.....	.....	0.00694	1.

Acres  $\times$  .0015625 = square miles.

Square yards  $\times$  .000000325 = square miles.

Acres  $\times$  .4840 = square yards.

Square yards  $\times$  .0002066 = acres.

A section of land is 1 mile square and contains 640 acres.

A square acre is 208.71 feet at each side, or 220  $\times$  198 feet.

A square  $\frac{1}{2}$  acre is 147.58 feet at each side, or 110  $\times$  198 feet.

A square  $\frac{1}{4}$  acre is 104.355 feet at each side, or 55  $\times$  198 feet.

A circular acre is 235.504 feet in diameter.

A circular  $\frac{1}{2}$  acre is 166.527 feet in diameter.

A circular  $\frac{1}{4}$  acre is 117.752 feet in diameter.

## CUBIC OR SOLID MEASURE

United States and British

1728 cubic inches = 1 cubic foot.

27 cubic feet = 1 cubic yard.

A cord of wood = 4'  $\times$  4'  $\times$  8' = 128 cubic feet.

A perch of masonry = 16.5'  $\times$  1.5'  $\times$  1' = 24.75 cubic feet, but is generally assumed at 25 cubic feet.

## LIQUID MEASURE

This measure is founded upon the old British wine gallon, which contained 231 cubic inches of distilled water at a temperature of 39.85° Fahrenheit, the barometer standing at 30 inches.

4 gills = 1 pint.

2 pints = 1 quart.

4 quarts = 1 gallon.

2 barrels = 1 hogshead.

2 hogsheads = 1 pipe, or butt.

2 pipes = 1 tun.

3  $\frac{1}{2}$  gallons = 1 barrel.

A puncheon is 84 gallons.

A tierce is 42 gallons.

## NAUTICAL MEASURE

A nautical or sea mile (a knot) is the length of a minute of longitude of the earth at the equator at the level of the sea. It is assumed = 6086.07 feet = 1.152664 statute or land miles by the United States coast survey.

3 nautical miles = 1 league.

## DRY MEASURE

United States Only

Struck Bushel	Pecks	Quarts	Pints	Gallons	Cubic Inches
1	4	32.	64	8.	2150.
..	1	8.	16	2.	537.6
..	..	1.	2	0.25	67.2
..	..	0.5	1	0.125	33.6
..	..	4.	8	1.	268.8

A gallon of liquid measure = 231 cubic inches.

A heaped bushel = 1  $\frac{1}{4}$  struck bushels. The cone in a heaped bushel must not be less than 6 inches high.

A barrel of U. S. hydraulic cement = 300 to 310 lbs., usually, and of genuine Portland cement = 425 lbs.

To reduce U. S. dry measures to British imperial of the same name, divide by 1.032.

## THE SIZE OF BOLT HEADS, NUTS AND WASHERS

Diameter of bolt = 1.

Diameter of the head and nut, square or hexagon = 1  $\frac{1}{4}$  from side to side.

Diameter of head and nut, hexagon = 2 over the angles.

Thickness of head =  $\frac{3}{4}$  of diameter of bolt.

Thickness of nut = 1  $\frac{1}{8}$  of diameter of bolt.

Washers should equal half the thickness of the head, and have twice the area.

Approximately—The weight of a hexagon head and square nut together will equal a rod of iron in length five times the diameter of the bolt;

For square heads and nuts, six times the diameter;

And for rose heads and square nuts, four times the diameter.

## RIVETS

Diameter of rivet for plates less than  $\frac{1}{2}$  inch thick = twice the thickness of the plate.

Diameter of rivets for plates  $\frac{1}{2}$  inch thick and upwards = once and a half the thickness of the plate.

Length of rivet measured before clinching = the thickness of the plate + 2  $\frac{1}{2}$  times the diameter of the rivet.

## SHRINKAGE OF CASTINGS

In locomotive cylinders is  $\frac{1}{16}$  inch in a foot.

Pipes is  $\frac{1}{8}$  inch in a foot.

Girders, beams, etc., is  $\frac{1}{8}$  inch in 15 inches.

Engine beams, connecting rods, etc., is  $\frac{1}{8}$  inch in 16 inches.

Large cylinders, say 70 inch diameter, 10 foot stroke, the contraction of diameter is  $\frac{3}{8}$  inch at top,  $\frac{1}{2}$  inch at bottom, and  $\frac{1}{8}$  inch in 16 inches in length.

Thin brass is  $\frac{1}{8}$  inch in 9 inches.

Thick brass is  $\frac{1}{8}$  inch in 10 inches.

Zinc is  $\frac{1}{8}$  inch in a foot.

Lead is  $\frac{1}{8}$  inch in a foot.

Copper is  $\frac{1}{8}$  inch in a foot.

Bismuth is  $\frac{1}{8}$  inch in a foot.

Tin is  $\frac{1}{8}$  inch in a foot.

## USEFUL INFORMATION

Diameter of a circle  $\times 3.1416$  = circumference.Diameter of a circle  $\times .8662$  = side of an equal square.Diameter of a circle  $\times .7071$  = side of an inscribed square.Square of a diameter  $\times .7854$  = area of circle.Circumference of a circle  $\times .31831$  = diameter.Side of a square  $\times 1.128$  = diameter of equal circle.Square root of an area  $\times 1.12837$  = diameter of equal circle.Square of the diameter of a sphere  $\times 3.1416$  = convex surface.Cube of the diameter of a sphere  $\times .5236$  = solidity.Diameter of a sphere  $\times .806$  = dimensions of equal cube.Diameter of a sphere  $\times .6667$  = length of equal cylinder.

To find the pressure in pounds per square inch of a column of water, multiply height of column in feet by .434.

Doubling the diameter of a circle increases its area four times.

Area of a triangle = base multiplied by half the altitude.

Area of a sector of a circle = one-half the length of the arc multiplied by the radius of the circle.

To find the capacity (U. S. gallons) of cylindrical tanks, square the diameter expressed in inches, multiply by the length and by .0034.

Square inches  $\times .00695$  = square feet.Cubic inches  $\times .00058$  = cubic feet.Cubic feet  $\times .03704$  = cubic yards.Cylindrical inches  $\times .0004545$  = cubic feet.Cylindrical feet  $\times .02909$  = cubic yards.Cubic inches  $\times .003607$  = imperial gallons.Cubic feet  $\times .6232$  = imperial gallons.Cylindrical inches  $\times .002832$  = imperial gallons.Cylindrical feet  $\times 4.895$  = imperial gallons.

153.346 circular inches = 1 square foot.

2,200 cylindrical inches = 1 cubic foot.

Avoirdupois pounds  $\times .009$  = cwt.Avoirdupois pounds  $\times .00045$  = tons.Lineal feet  $\times .00019$  = statute miles.Lineal yards  $\times .000568$  = statute miles.VOLUME OF AIR DISCHARGED THROUGH A ROUND ORIFICE

## USEFUL INFORMATION FOR CONTRACTORS

One-fifth more siding and flooring is needed than the number of square feet of surface to be covered because of the lap in siding and flooring.

One thousand laths will cover seventy yards of surface and eleven pounds of lath nails will nail them on.

Eight bushels of good lime, sixteen bushels of sand and one bushel of hair will make enough good mortar to plaster 100 square yards.

One cord of stone, three bushels of lime and a cubic yard of sand will lay 100 cubic feet of wall.

Cement, one bushel, and sand, two bushels, will cover  $3\frac{1}{2}$  square yards, 1 inch thick;  $4\frac{1}{2}$  square yards,  $\frac{3}{4}$  inch thick; and 6  $\frac{1}{2}$  square yards,  $\frac{1}{2}$  inch thick.One bushel of cement and one bushel of sand will cover 2  $\frac{1}{2}$  square yards, 1 inch thick; 3 square yards,  $\frac{3}{4}$  inch thick; and  $4\frac{1}{2}$  square yards,  $\frac{1}{2}$  inch thick.

## AMOUNT OF PAINT REQUIRED FOR A GIVEN SURFACE

It is impossible to give a rule that will apply in all cases, as the amount varies with the kind and the thickness of the paint, the kind of wood or other material to which it is applied, the age of the surface, etc. The following is an approximate rule: Divide the number of square feet of surface by 200. The result will be the number of gallons of liquid paint required to give two coats; or divide by 18 and the result will be the number of pounds of pure ground white lead required to give three coats.

## ROOF ELEVATIONS

By the "pitch" of a roof is meant the relation which the height of the ridge above the level of the roof-plates bears to the span, or the distance between the studs on which the roof rests.

The length of rafters for the most common pitches can be found as follows from any given span:

If  $\frac{1}{4}$  pitch, multiply span by .559 or  $\frac{1}{2}$  nearly. If  $\frac{1}{2}$  pitch, multiply span by .71 or  $\frac{3}{4}$  nearly.If  $\frac{3}{4}$  pitch, multiply span by .8 or  $\frac{4}{5}$  nearly. If full pitch, multiply span by .8 or  $\frac{4}{5}$  nearly.If  $\frac{1}{2}$  pitch, multiply span by .625 or  $\frac{5}{8}$  nearly.

To length thus obtained must be added amount of projections of rafters at the eaves.

As rafters must be purchased of even length, a few inches more or less on their lengths will make a difference to the pitch so slight that it cannot be detected by the eye.

Example.—To determine the length of rafters for a roof constructed one-half pitch, with a span of 24 feet:  $24 \times .71 = 17.04$ , or, practically, just 17 feet. A projection of one foot for eaves makes the length to be purchased 18 feet.

## USEFUL INFORMATION

## AVOIRDUPOIS WEIGHT

Drachms	16=	1 oz.=437.5 grains troy.
256=	16=	1 lb.=1,215.3 lbs. troy.
6,400=	400=	25=1 quarter.
25,600=	1,600=	100=4=1 cwt.
512,000=	32,000=	2,000=80=20=1 ton.

## TROY WEIGHT

Grains	24=	1 dwt.
480=	20=	1 oz.
5,760=	240=	1 lb.=22.316 cubic inches of distilled water at 62° Fahr.

## DRY MEASURE

Pints=	3.6 cubic inches.
2=	1 quart=67.2 cubic inches.
8=	4=1 gallon=268.8 cubic inches.
16=	8=2=1 peck=537.6 cubic inches.
64=	32=8=4=1 bushel.
Note.—The standard U. S. bushel is the Winchester bushel, which is in cylinder form, 18½ inches in diameter and 8 inches deep, and contains 2150.42 cubic inches.	

## SQUARE MEASURE

Inches	144=	1 foot.
1,296=	9=	1 yard.
39,204=	272.25=	30.25=1 perch.
1,568,160=	10,890=	1,210=40=1 rood.
6,272,640=	43,560=	4,340=160=4=1 acre.
An acre is 69,570.1 yards per square; or, 208,710,321 feet square.		

A township is 6 miles square=36 sections.  
 A section is 1 mile square=640 acres.  
 A section is ½ mile square=160 acres.  
 A section is ¼ mile square=40 acres.  
 A span is the distance that can be reached between the end of the middle finger and the end of the thumb. Among sailors 8 spans are equal to 1 thumb.  
 A geographic mile is ½<sub>1000</sub> of the distance around the center of the earth.  
 A square mile of land is called a section.  
 A Gunter's chain, used by land surveyors, is 4 rods, or 66 feet long, and consists of 100 links. 7.92 inches make a link.  
 Canal and railroad engineers use an engineer's chain, which consists of 100 links, each 1 foot long.

## PAPER MEASURE

Quire of paper.....	24 sheets.
Ream of paper.....	20 quires, or 480 sheets.
Bundle.....	2 reams.
Bale.....	5 bundles.
Roll of parchment.....	60 skins.

## Sheet of paper folded into—

2 leaves is termed folio size.
4 leaves is termed 4to. or quarto.
8 leaves is termed 8vo. or octavo.
12 leaves is termed 12mo. or duodecimo.
16 leaves is termed 16mo.
18 leaves is termed 18mo.
24 leaves is termed 24mo.
48 leaves is termed 48mo.

## TABLE OF LENGTHS AND WEIGHTS AND THEIR APPROXIMATE EQUIVALENTS IN THE METRIC SYSTEM

## LENGTH

1 meter .....	=39.37	inches.
1 inch .....	= 3.3	feet.
1 centimeter.....	= 2.54	centimeters.
1 foot (twelve inches).....	=30.48	centimeters.
2 inches .....	= 5.	centimeters.
4 inches .....	=10.	centimeters.
3 inches .....	=20.	centimeters.
12 inches (one foot).....	=30.48	centimeters.
16 inches .....	=40.	centimeters.
20 inches .....	=50.	centimeters.
4 feet .....	= 1.22	meters.
8 feet .....	= 2.438	meters.
12 feet .....	= 3.658	meters.

## APOTHECARIES' WEIGHT

Grains	20=	1 scruple or ʒ
60=	3=	1 dram or ʒ
480=	24=	8=1 oz. or ʒ
5,760=	288=	96=12=1 lb.

## APOTHECARIES' MEASURE

60 minims .....	=1 fluid-dram.
8 fluid-drams .....	=1 fluid-ounce.
16 fluid-ounces .....	=1 pint.
8 pints .....	=1 gallon.

Forty-five drops, or a common teaspoonful, make about 1 fluid-dram; 2 tablespoonsful, about 1 fluid-ounce; a wineglassful, about 1½ fluid-ounces; and a teacupful, about 4 fluid-ounces.

## LIQUID OR WINE MEASURE

Gills=7.2187 cubic inches.		
4=	1 pint=28.875 cubic inches.	
8=	2=1 quart=57.75 cubic inches.	
32=	8=	4=1 gallon.
2,016=	404=	252=63=1 hogshead.
4,032=	1,008=	504=126=2=1 pipe.
8,064=	2,016=	1,008=252=4=2=1 ton.

Note.—The standard unit and liquid measure adopted by the U. S. Government is the Winchester wine gallon, which contains 231 cubic inches, and holds 8.339 pounds, avoirdupois, of distilled water, at its maximum density weighed in air, the barometer being at 30 inches.

The imperial gallon, adopted by Great Britain, contains 277.274 cubic inches, and equals 1.20032 U. S. gallons.

The following cylinders contain some of these measures very closely:

Gill, diameter, 1½ inches; height, 3 inches.
Pint, diameter, 3½ inches; height, 3 inches.
Quart, diameter, 3½ inches; height, 6 inches.
Gallon, diameter, 7 inches; height, 6 inches.
8 gallon, diameter, 14 inches; height, 12 inches.
10 gallon, diameter, 14 inches; height, 15 inches.

## WEIGHT OF WATER

1 cubic inch .....	= .03617 pounds.
12 cubic inches .....	= .434 pounds.
1 cubic foot .....	= 7.48052 U. S. gallons.
1 U. S. gallon .....	= 8.355 pounds.
1.8 cubic feet .....	= 2.240 pounds.
2,240 pounds .....	=268.8 U. S. gallons.

## LIQUID WEIGHT

	Lbs. Avoirdupois
1 gallon distilled water .....	10
1 gallon sea water .....	10.32
1 gallon proof spirits .....	9.08

## WEIGHT OF OILS

	Lbs. Avoirdupois
1 gallon sperm .....	7½
1 gallon whale .....	7½
1 gallon lard .....	7½
1 gallon tallow .....	7½
1 gallon neat's-foot .....	7½
1 gallon paraffine, 28° gravity .....	7½
1 gallon paraffine, 25° gravity .....	7½
1 gallon reduced Franklin .....	7½
1 gallon castor .....	8
1 gallon kerosene .....	6½

## WEIGHT

1 pound.....	=453.592 grams=	.4536 kilograms.
1 gram .....	= .03527 ounce.	
100 pounds .....	=45.36 kilograms.	
1 kilogram .....	= 2.2046 pounds.	
25 pounds .....	=11.34 kilograms.	
100 pounds .....	=45.36 kilograms.

## THE SPEED OF DRILLS

A feed per revolution of .004 to .007 for drills  $\frac{1}{4}$  inch and smaller, and from .007 to .015 for larger is about all that should be required.

This feed is based on a peripheral speed of a drill equal to:

30 feet per minute for steel; 35 feet per minute for iron; 60 feet per minute for brass.

It may also be found advisable to vary the speed somewhat according as the material to be drilled is more or less refractory.

We believe that these speeds should not be exceeded under ordinary circumstances.

Table of Cutting Speeds

Ft. per Minute	15 ft.	20 ft.	25 ft.	30 ft.	35 ft.	40 ft.	45 ft.	50 ft.	60 ft.	70 ft.	80 ft.

40	.003144	....	....	.0048	.097	....	40

While we give the above table for purposes of reference, there is so much chance for error in ordering by gauge number, that we urge all parties when ordering, to give decimal sizes instead of gauge number.

## NOTE

Above estimated weights are based on U. S. Standard gauge for iron. For Steel, add 2 per cent. These figures are given for convenience in estimating only, and may vary somewhat in actual practice. The sizes below the heavy black line will probably considerably exceed the weights given, and it is safe therefore, to allow for an overweight of at least 10 per cent.

These Drilling Templates are in multiples of four, so that fittings may be made to face in any quarter and bolt holes straddle the center line.

Bolt holes are drilled  $\frac{1}{8}$  inch larger than nominal diameter of bolts.

# GEO. B. CARPENTER & CO.

## PARCEL POST RATES

The Local Rate applies to deliveries made within the limits of the Chicago postal district—the Zone Rate applies to deliveries beyond that district.

Parcels weighing four ounces or less are mailable at the rate of 1 cent per ounce or fraction of an ounce, regardless of distance. All other parcels are mailable at rates in table herewith. A fraction of a pound is considered a full pound.

Limit of delivery weight in first and second Zones, 50 pounds; all other Zones, 20 pounds.

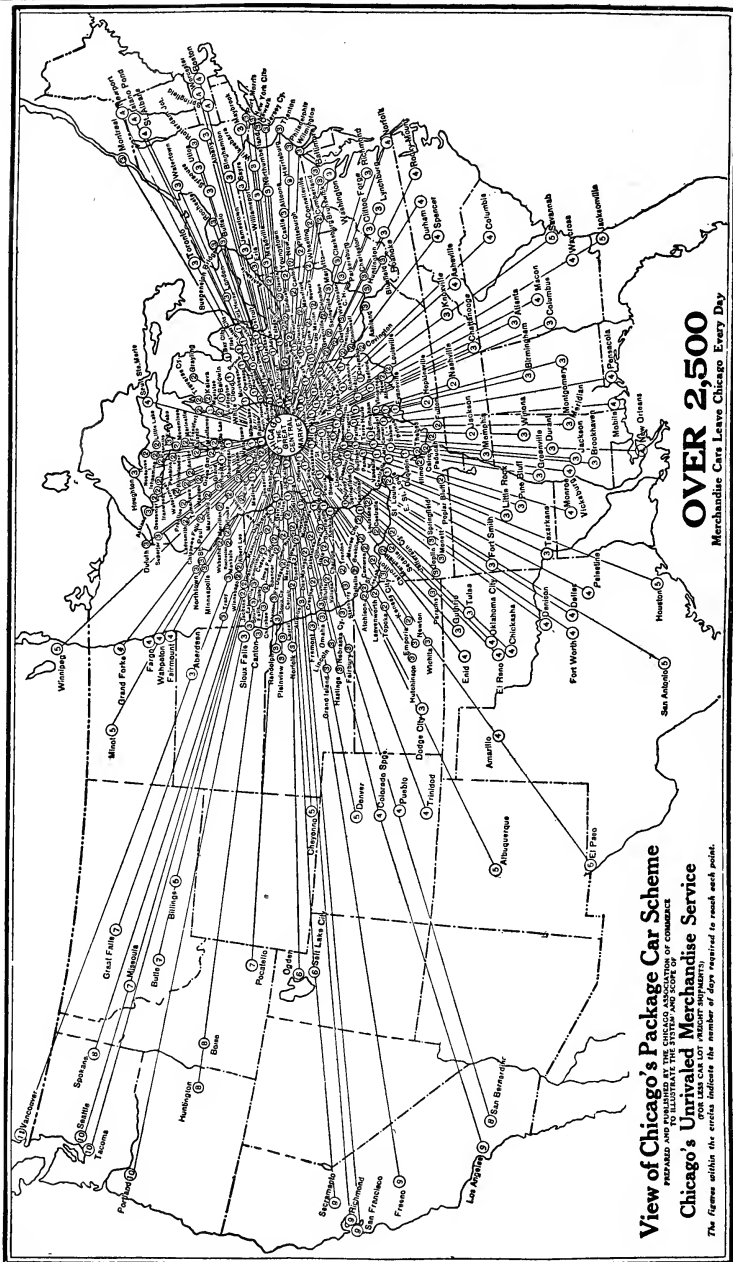

Parcels must not be more than 84 inches in length or girth, nor fastened together in any manner liable to cause injury to postal employees or equipment. It must be of a character not perishable within a reasonable period.

All pieces of machinery and sharp pointed or edged pieces must be thoroughly protected and wrapped in cloth or strong paper, or be crated or boxed.

Regular mail carriers deliver parcel post mail whenever possible.

## CHICAGO PACKAGE CAR SCHEME (For Less than Car Lot Freight Shipments)

Figures within the circles indicate numbers of days required to reach points shown

## L. C. L. FREIGHT CLASSIFICATIONS.

Freight shipments originating in Chicago are divided into four general territories for purposes of classifications—the Eastern, or official, the Southern, Western and Illinois, officially designated as E. S. W. and I.

The Eastern, or Official, Territory embraces all states east of Lake Michigan and Illinois, and north of the Ohio River, including West Virginia, and points on and north of the N. & W. Ry. in Virginia. It also includes all the Central, North Atlantic and New England States and Eastern Canada. In addition it includes Louisville, Henderson and Owensboro, Kentucky, Bristol, Tenn., as well as points on the C. & O. in Kentucky. It also includes the Eastern portion of the Upper Peninsula of Michigan, and all Virginian Ry. Stations.

The Southern Territory embraces all states south of the Ohio River, and those points south of the N. & W. Ry. in Virginia except as shown under the Eastern classification. It also covers points on the west bank of the Mississippi from Helena, Ark., south to New Orleans, La.

The Western Territory includes Wisconsin, the Upper Peninsula of Michigan, except as covered by the Eastern Classifications, and the state of Minnesota except as provided for in the Illinois Classifications, and all points west of the Mississippi River.

The Illinois Territory includes the state of Illinois, and those points on the west bank of the Mississippi from St. Louis, Mo., to Dubuque, Iowa, inclusive.

## Explanation of Characters in the Tables Below.

1—First Class

3—Third Class

5—Fifth Class

2—Second Class

4—Fourth Class

6—Sixth Class

1½—1½ times First Class

D1—Double First Class

R25—Rule 25, E Classification only, 15% less than second class.

R26—Rule 26, E Classification only, 20% less than third class.

N. O. S.—Not otherwise specified. K. D.—Knocked down. S. U.—Set up.

The minimum charge on any shipment is usually at the rate of 100 lbs. at First Class Rate.

## FREIGHT RATES (per 100 lbs.) LESS THAN CAR LOTS

The tables below give rates to several points in each state. Other towns, not listed here, but in the same parts of states, take practically the same rates, or within a few cents per 100 pounds, more or less.

First refer to Classification Tables and ascertain class to which goods belong. Then note rate per 100 pounds for that class, in table below. Shipments of less than 100 pounds are usually charged as 100 pounds at First Class Rate.

**NOTE.**—At the time of going to press with this catalog the Interstate Commerce Commission has increased ALL rates approximately 15%, but official rate tables have not yet been compiled.

From CHICAGO To	Freight Rates per 100 lbs.				From CHICAGO To	Freight Rates per 100 lbs.

## SCALE OF FIRST-CLASS EXPRESS CHARGES

Official Scale of Graduated Charges Used by All Express Companies

In the column under your rate, opposite the figures corresponding with weight of your package, will be found the amount you will be required to pay. If the rate to your Station is not shown, refer to the next higher weight of rate, and the result will be within a few cents of the correct charge. For example: If your rate is \$3.00 per 100 pounds, and your package weighs 15 pounds, the express charges will be 66 cents.

When the rate per 100 lbs. is	\$0.60	\$0.75	\$1.00	\$1.25	\$1.50	\$1.75	\$2.00	\$2.25	\$2.50	\$2.75	\$3.00
